This volume of *Advances in Teacher Education* is about beliefs held by teachers and addresses the important topic of teacher beliefs from a variety of disciplinary perspectives Most of the authors who have contributed to this collection of essays assume that beliefs are propositions that are felt to be true by the person embracing them but that do not necessarily rest on the kind of evidence that justifies the use of the term knowledge Teacher beliefs are an important topic because it is hypothesized that teachers and teacher candidates use them to shape the information they receive from formal teacher preparation and to direct subsequent decision making in the classroom **Resources in Education**, 1998

Dialogic Learning Jos van den Linden, Peter Renshaw, 2006-01-12 Contemporary researchers have analysed dialogue primarily in terms of instruction conversation or inquiry There is an irreducible tension when the terms dialogue and instruction are brought together because the former implies an emergent process of give and take whereas the latter implies a sequence of predetermined moves It is argued that effective teachers have learned how to perform in this contradictory space to both follow and lead to be both responsive and directive to require both independence and receptiveness from learners Instructional dialogue therefore is an artful performance rather than a prescribed technique Dialogues also may be structured as conversations which function to build consensus conformity to everyday ritualistic practices and a sense of community The dark side of the dialogic we and the community formed around our and us is the inevitable boundary that excludes them and theirs When dialogues are structured to build consensus and community critical reflection on the bases of that consensus is required and vigilance to ensure that difference and diversity are not being excluded or assimilated see Renshaw 2002 Again it is argued that there is an irreducible tension here because understanding and appreciating diversity can be achieved only through engagement and living together in communities Teachers who work to create such communities in their classrooms need to balance the need for common practices with the space to be different resistant or challenging again an artful performance that is difficult to articulate in terms of specific teaching techniques *Designing Technology-Mediated Case Learning in Higher Education* Choon Lang Gwendoline Quek, Qiyun Wang, 2023-01-02 This book collects case studies in design and application of technology mediated case based learning models in higher education It provides a much needed updated synthesis of recent research and application of technology mediated case based learning

across disciplines within higher education The book does not only provide a broad perspective and deep understanding on the designs and instructional applications of technology mediated case based learning models but also inspire more interest in adopting or inventing new situated case based learning models in the context of higher education
