Doing Teacher-Research Wolff-Michael Roth, 2007-01-01 There are many teachers who think about doing research in their own classes and schools but who are perplexed by what appears to be involved This book is intended for these perplexed practitioners to provide them with an easily understandable narrative about the concrete praxis of doing research in their classrooms or in those of their teacher peers teaching next door or in the same school The fundamental idea underlying this book is to provide an easily accessible but nevertheless intellectually honest text that allows teachers to increase their agency with respect to better understanding their praxis and the events in their classrooms by means of research The author draws on his experience of doing teacher research while being a high school teacher and department head Roth uses six concrete research studies that he has conducted alone or with peers to describe the salient parts of any teacher researcher investigation including what topic to study issues of ethics and permissions from students school and parents how and what sources to collect how to structure resources how to construct data from the materials how to derive claims and how to write a report research study Roth chose the case based approach because cases provide the details necessary for understanding why and how he as teacher researcher has made certain decisions and what he would do differently today Using this case based approach he allows readers to tie methods choices to situations that they likely are familiar with

Effects of integrated learning: explicating a mathematical concept in inquiry-based science camps Louise Bindel, 2018 Although various arguments for integrated learning of mathematics and science exist empirical evidence that integrated learning is as beneficial as anticipated is limited Therefore this quasi experimental study investigates the effect of integrated learning of mathematics and science on eight student variables by comparing it to a control group Results show that integrated learning is no miracle cure but has positive and negative effects on specific student outcomes Whereas integrated learning effects students view of the relation between mathematics and science positively it effects students scientific self concept negatively Thus integrated learning should not substitute but rather complement disciplinary learning Obwohl zahlreiche Argumente für das integrierte Lernen von Mathematik und Naturwissenschaften existieren ist die vorteilhafte Wirkung integrierten Lernens begrenzt empirisch belegt Im Rahmen dieser quasi experimentellen Studie wird der Effekt integrierten Lernens auf acht Sch lervariablen durch Vergleiche mit einer Kontrollgruppe untersucht Die Ergebnisse zeigen dass integriertes Lernen kein Allheilmittel ist sondern

positive und negative Effekte auf bestimmte Sch lervariablen hat W hrend integriertes Lernen die Sicht der Sch lerinnen und Sch ler auf die Beziehung zwischen Mathematik und Naturwissenschaften positiv beeinflusst hat es einen negativen Effekt auf das naturwissenschaftliche Selbstkonzept Daher sollte integriertes Lernen nicht stellvertretend sondern erg nzend zu disziplini rem Lernen implementiert werden **Resources in Education** ,1990-04
