## **Educational Research A Guide To The Process:**

Educational Research Norman E. Wallen, Jack R. Fraenkel, 2013-03-07 Educational Research A Guide to the Process is a different kind of research text. It emphasizes the process of research that is what researchers actually do as they go about designing and carrying out their research activities. Rather than passively reading about research operations, it promotes content mastery by using a three-step pedagogical model that involves a manageable chunk of text, a comprehension or application exercise, and author feedback on the exercise. The text contains approximately 150 of these exercise-feedback units. The second edition has been thoroughly updated, expanded from 15 to 20 chapters, and reorganized into two parts. Part I covers basic aspects of the research process, provides an example of a student research proposal, and shows how to evaluate a research report. Part II provides a separate chapter for each research methodology, including two chapters on qualitative research. Other noteworthy changes include more annotated studies and more visual illustrations of statistical and research methods.

Throughout the book, Daniel J. Boudah covers all types of research, including experimental, descriptive, qualitative, group designs, and single subject designs, and helps readers link research questions to designs, designs to data sources, and data sources to appropriate analyses. Key Features: Technology in Research boxes help readers take advantage of related technologies and online resources. In Their Own Words sections provide tips and suggestions from students who have completed projects. End of chapter Your Research Project in Action sections prompt students to apply what they have learned to their current research projects. In-text learning aids, including chapter opening outlines and objectives and chapter ending summaries and discussion questions, help readers master the material.
