Lichtarowicz,2012-12-06 This volume contains papers presented at the 11th International Conference on Jet Cutting Technology held at St Andrews Scotland on 8 10 September 1992 Jetting techniques have been successfully applied for many years in the field of cleaning and descaling Today however jet cutting is used in operations as diverse as removing cancerous growths from the human body decommissioning sunsea installations and disabling explosive munitions The diversity is reflected in the papers presented at the conference The papers were divided into several main sections jetting basics materials jetting basics fluid mechanics mining and quarrying civil engineering new developments petrochem cleaning and surface treatment and manufacturing The high quality of papers presented at the conference has further reinforced its position as the premier event in the field The volume will be of interest to researchers developers and manufacturers of systems equipment users and contractors Proceedings of the 5th Pacific

Rim International Conference on Water Jet Technology M. M. Vijay,N. R. Babu,1998 *Industrial High Pressure Applications* Rudolf Eggers,2012-07-11 Industrial high pressure processes open the door to many reactions that are not possible under normal conditions These are to be found in such different areas as polymerization catalytic reactions separations oil and gas recovery food processing biocatalysis and more The most famous high pressure process is the so called Haber Bosch process used for fertilizers and which was awarded a Nobel prize Following an introduction on historical development the current state and future trends this timely and comprehensive publication goes on to describe different industrial processes including methanol and other catalytic syntheses polymerization and renewable energy processes before covering safety and equipment issues With its excellent choice of industrial contributions this handbook offers high quality information not found elsewhere making it invaluable reading for a broad and interdisciplinary audience *Nuclear Waste Cleanup Technologies and Opportunities* Robert Noyes,1995-12-31 One of the largest most complicated and expensive environmental problems in the United States is the cleanup of nuclear wastes The US Department of Energy DOE has approximately 4 000 contaminated sites covering tens of thousands of acres and replete with contaminated hazardous or radioactive waste soil or structures In addition to high level waste it has more than 250 000 cubic meters of transuranic waste and millions of cubic meters of low level radio active waste In addition DOE is responsible for thousands of facilities awaiting decontamination decommissioning and dismantling DOE and its predecessors have been involved in the

management of radioactive wastes since 1943 when such wastes were first generated in significant quantities as by products of nuclear weapons production Waste connected with DOE s nuclear weapons complex has been accumulating as a result of various operations spanning over five decades The cost estimates for nuclear waste cleanup in the United States have been rapidly rising It has recently been estimated to be in a range from 200 to 350 billion Costs could vary considerably based on future philosophies as to whether to isolate certain sites the iron fence philosophy or clean them up to a pristine condition the greenfields philosophy Funding will also be based on Congressional action that may reduce environmental cleanup based on budget considerations
