Emerging from Darkness Paul Mirecki,Jason BeDuhn,2020-10-26 Modern interpretation of the Manichaeian religious tradition requires a firm foundation in the sober and meticulous reconstruction of highly fragmentary sources The studies collected in this volume contribute to such a foundation by bringing new primary texts to the public for the first time extracting new data from previously known sources and defining and delimiting important but previously neglected sets of material The studies are authored by an international group of leading scholars in the fields of ancient Mediterranean and Near Eastern studies comparative religion early Christianity patristics art history Turkic studies and Coptology The textual and art historical materials examined possess distinctive histories character and significance representing the broad geographical range of Manichaeism from Algeria to China By elucidating these essential remains of the Manichaeian religion the comprehensive treatments contained in *Emerging from Darkness* provide a provocative picture of Manichaeism as a diverse and productive tradition in a variety of settings and media The volume will be foundational for future scholarly studies on the sources presented and for studies in Manichaeism and late antique religions in general **God's Library** Brent Nongbri,2018-08-21 In this bold and groundbreaking book Brent Nongbri provides an up to date introduction to the

major collections of early Christian manuscripts and demonstrates that much of what we thought we knew about these books and fragments is mistaken. While biblical scholars have expended much effort in their study of the texts contained within the earliest Christian manuscripts, there has been a surprising lack of interest in thinking about these books as material objects with individual unique histories. We have too often ignored the ways that the antiquities market obscures our knowledge of the origins of these manuscripts. Through painstaking archival research and detailed studies of the most important collections of early Christian manuscripts, Nongbri vividly shows that the earliest Christian books are more than just carriers of texts or samples of handwriting. They are three dimensional archaeological artifacts with fascinating stories to tell if we are willing to listen.

Biocomputing 2019 - Proceedings Of The Pacific Symposium Russ B Altman, A Keith Dunker, Lawrence Hunter, Marylyn D Ritchie, Tiffany A Murray, Teri E Klein, 2018-11-28. The Pacific Symposium on Biocomputing PSB 2019 is an international multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2019 will be held on January 3-7, 2019 in Kohala Coast, Hawaii. Tutorials and workshops will be offered prior to the start of the conference. PSB 2019 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's hot topics. In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field.

Principles of Computational Genomics Paolo Provero, 2025-05-13. The advent of high-throughput experimental assays and, in particular, of next-generation sequencing has revolutionized life sciences by enabling the generation of data at the scale of the whole genome. Extracting biologically useful or clinically actionable information from this data requires analytical methods quite different from the ones used to analyze low-throughput experimental results. The development of these methods is the goal of computational biology. Understanding the principles on which these methods are based is thus necessary for all students and researchers in life sciences. This book provides the conceptual framework needed to understand computational genomics enough to be able to follow the arguments in recent papers or to collaborate with computational scientists in research projects. In particular, it introduces the mathematical and statistical basis of the methods in some depth. The main focus is on the analysis of next-generation sequencing assays, both for the interpretation of the DNA sequence per se, sequence alignment, phylogenetic tree reconstruction, genetic variants, and for the study of gene regulation and epigenomics, gene expression.

transcription factor binding chromatin states 3D structure of the genome The final chapter discusses the associations of genetic variants with phenotypes and diseases and their biological interpretation Principles of Computational Genomics provides a solid foundation for understanding the many parts of computational genomics including those not treated directly in the book It will be of great benefit to students and researchers across the life sciences **Functional Annotation of**

Early Christianity at Amheida (Egypt's Dakhla Oasis), A Fourth-Century Church Nicola Aravecchia, 2024-09-10. An archaeological, historical and art historical study of a remarkable early church excavated at Amheida in Egypt's Dakhla Oasis. *Early Christianity at Amheida, Egypt's Dakhla Oasis: A Fourth-Century Church, Volume 1: The Excavations* is an archaeological, historical and art historical study of a remarkable basilica church excavated at Amheida in Dakhla Oasis. This church, excavated between 2012 and 2023, dates to the fourth century CE and therefore is among the earliest purpose-built churches in Egypt. It also contains one of the oldest, if not the oldest, excavated Christian funerary crypts in the country. The church at Amheida thus offers a wealth of new data on early Christianity in Egypt, particularly with respect to the earliest phases of Christian art and architecture and burial customs. Aravecchia presents a systematic treatment of the stratigraphy, building techniques, materials, features, architecture, decoration and finds of the church, carefully contextualized in the early Christianity of the late antique Great Oasis and Egypt more broadly.
