Handbook Of Expert Systems In Manufacturing:

Handbook of Expert Systems in Manufacturing Rex Maus, Jessica Keyes, 1991 Contributors from major corporations present case histories of expert systems and neural networks presently implemented in manufacturing applications for readers interested in manufacturing technology but not necessarily with any background in expert systems or computers in general. Assesses various techniques and strategies for system development and implementation and return on investment. Acidic paper. Annotation copyrighted by Book News Inc. Portland, OR. *Handbook of Expert Systems Applications in Manufacturing Structures and rules* A. Mital, S. Anand, 2013-03-08 This book is aimed at both researchers and practitioners and provides a collection of expert systems in manufacturing and production engineering along with their knowledge base and rules. We believe that inclusion of the knowledge base and associated rules is essential if practitioners are to derive full benefit from these expert systems. This unique book is the result of our belief and the efforts of our distinguished colleagues who subscribe to this philosophy. A total of 15 different expert systems are included in this book. These expert systems are preceded by an introductory chapter written by Kuo. Preface. XVII. Mital and Anand. The expert system rules are included on a floppy disk in ASCII and can be easily accessed. These rules and the description of the expert system's structure should assist the users in customizing these systems. Overall, the expert systems included in this volume cover a fairly wide variety of manufacturing and production engineering topics. Handbook of Expert Systems Applications in Manufacturing Structures and rules Anil Mital, S. Anand, 2012-11-02 Artificial intelligence (AI) is playing an increasingly larger role in production and manufacturing engineering. Much of this growth is the result of special purpose computer controlled machines that are dominating modern manufacturing operations such as computer numerically controlled machines and robots and production activities such as materials handling and process planning. Since a great deal of production and manufacturing engineering knowledge can be put in the form of rules, expert systems have emerged as a promising practical tool of AI in solving manufacturing and production engineering problems. The expert systems allow knowledge to be used for constructing human machine systems that have specialized methods and techniques for solving problems in a particular application area. Over the years many expert systems have been developed for applications in manufacturing and production engineering. Most of these expert systems, however, have been of little use to practitioners at large. The primary reason for this limited utility is that in most cases the developers do not divulge the knowledge base and inference mechanism that form the backbone of an expert system. Without the knowledge base, users can only derive a very limited benefit from an expert system and for all practical purposes a technical publication describing the expert system for the reader merely becomes a publicity brochure. The reader must either develop his own knowledge base or purchase the system from the developer, often at a substantial cost.
