Real Analysis with Economic Applications Efe A.

Ok,2011-09-05 There are many mathematics textbooks on real analysis but they focus on topics not readily helpful for studying economic theory or they are inaccessible to most graduate students of economics Real Analysis with Economic Applications aims to fill this gap by providing an ideal textbook and reference on real analysis tailored specifically to the concerns of such students The emphasis throughout is on topics directly relevant to economic theory In addition to addressing the usual topics of real analysis this book discusses the elements of order theory convex analysis optimization correspondences linear and nonlinear functional analysis fixed point theory dynamic programming and calculus of variations Efe Ok complements the mathematical development with applications that provide concise introductions to various topics from economic theory including individual decision theory and games welfare economics information theory general equilibrium and finance and intertemporal economics Moreover apart from direct applications to economic theory his book includes numerous fixed point theorems and applications to functional equations and optimization theory The book is rigorous but accessible to those who are relatively new to the ways of real analysis The formal exposition is accompanied by discussions that describe the basic ideas in relatively heuristic terms and by more than 1 000 exercises of varying difficulty This book will be an indispensable resource in courses on mathematics for economists and as a reference for graduate students working on economic theory

A Combination of Geometry Theorem Proving and Nonstandard Analysis with Application to Newton's Principia Jacques Fleuriot,2012-09-30 Sir Isaac Newton s philosophi Naturalis Principia Mathematica the Principia contains a prose style mixture of geometric and limit reasoning that has often been viewed as logically vague In A Combination of Geometry Theorem Proving and Nonstandard Analysis Jacques Fleuriot presents a formalization of Lemmas and Propositions from the Principia using a combination of methods from geometry and nonstandard analysis The mechanization of the procedures which respects much of Newton s original reasoning is developed within the theorem prover Isabelle The application of this framework to the mechanization of elementary real analysis using nonstandard techniques is also discussed
