Instant Clinical Pharmacology:

Instant Clinical Pharmacology Evan J. Begg, 2002-12-23 Instant Clinical Pharmacology is a short introductory text which explains the principles behind the prescribing process. The book provides essential information about the core topics in clinical pharmacology and bridges the gap between basic pharmacology and the therapeutic use of drugs. Written for the busy medical student and junior doctor, the book provides the reader with a quick resource for understanding the principles of drug action and interaction and the use of drugs in clinical practice. The book has been designed for ease of use and is organised into short modules. As with other titles in the Instant Series, the accessible style of one topic per page is used, accompanied by clear illustrations. Instant Clinical Pharmacology is ideal for medical students requiring a quick overview of the topic or for review when preparing for examinations.

Paediatric Clinical Pharmacology Evelyne Jacqz-Aigrain, Imti Choonara, 2021-02-25 The treatment of children with medicinal products is an important scientific area. It is recognized that many medicines that are used extensively in paediatric patients are either unlicensed or off label. This textbook will help paediatric health professionals effectively treat children with the most appropriate medicine with minimal side effects.

Pharmacological Basis of Acute Care Yoo Kuen Chan, Kwee Peng Ng, Debra Si Mui Sim, 2014-11-19 This book is the 4th in a series of Acute Care books written with the aim to address the NEEDS of health care providers when handling the acutely ill patients. Globally, it has become apparent that the study of pharmacology and subsequent clinical training has not always adequately equipped young doctors with the ability to administer drugs to their patients safely and confidently, particularly in the critically ill patient. Compounding this issue is the lack of resource material related to these pharmacological concepts contained in one book that can help health care providers to understand and manage drug therapy in the acute situation. In spite of progressively newer and more developed protocols, guidelines, algorithms, and many other books addressing the technical aspects of what needs to be done, most health care providers still find it difficult to grasp the basic pharmacological knowledge and rationally deliver the CARE that is required in the acute phase of patient management. The editors/authors have therefore aimed for a book that highlights topics and pharmacological issues pertinent to management of patients in their hour of need. This is a multi-author book, but the style has been guided by 3 editors. The editors have used a different perspective, that of normalizing abnormal physiological processes with pharmacological agents, to address the GAPS in a bedside to bench approach. The details are pared down, but important principles/concepts are emphasized.

Pharmacology for the Health Care Professions Christine M. Thorp, 2008-09-15 Pharmacology for the Health Care Professions is an accessible introduction to the pharmacology necessary for health care professionals training to be non-medical prescribers, looking for an overview of the subject. The book covers the pharmacology necessary for accredited training programmes in non-medical prescribing and certification in access and supply of prescription-only medicines and will be useful as an ongoing reference for future use in practice. Opening with a general introduction to

pharmacology as a science the book goes on to explain what is meant by drugs and medicines and why pharmacology should be of relevance to health care professionals The reader is presented with general principles of pharmacology followed by systemic pharmacology that covers the actions of important groups of drugs in common use to treat diseases and conditions of the cardiovascular respiratory endocrine musculoskeletal skin and central nervous systems The physiology and pathophysiology relevant to the understanding of how these drugs work is included Finally the book explores the law in relation to the sale supply administration and prescription of drugs and explains what is meant by non medical prescribing All aspects of non medical prescribing are considered including the use of exemptions to the Medicines Act patient group directions supplementary prescribing and the development of independent prescribing for nurses and pharmacists Pharmacology is explained in simple easy to understand terms and the book avoids any unnecessary chemistry where possible Case studies that are of particular relevance to health care professionals are used throughout to illustrate the importance of the pharmacology major body systems and pathologies and the potential problems of adverse drug reactions and drug drug interactions
