Institutional Basis For Environmental Stewardship The Structure And Quality Of Property Rights:

An Institutional Basis for Environmental Stewardship D.A. Fuchs, 2013-03-09 What is the role of government in environmental politics and policy The answer to this question used to be relatively clear Government was to regulate the environmental performance of state and non state actors to set standards impose charges and establish more or less stringent criteria of acceptable behavior With the increasing appearance of the issues of globalization and global governance in the political science literature however the focus has turned to the role of non state actors Academic research and the popular debate have identified business non governmental organizations NGOs and civil society as such as increasingly important and potentially powerful actors in the political arena At the same time some observers have proclaimed the influence of government to be declining Others have argued that the role of government primarily is changing rather than declining Those who adopt the latter perspective postulate that the new role for government in this changing political and socio economic context is to set the framework for action In this perspective government is still of fundamental importance for the functioning of the society the economy and political decision making but its role is different in that government merely provides the institutional framework facilitating desired outcomes *An Institutional Basis for Environmental Stewardship* D.A. Fuchs, 2003-02-28 This book explores an institutional framework for environmental governance Starting from the assumption that governments can facilitate the sustainability of resource management by state and non state actors through the structuring of decision contexts the analyses combined in the book explore determinants of environmental stewardship with particular emphasis on the structure and quality of property rights In pursuit of their objectives the analyses build on previous research on determinants of environmental quality critically examine findings and claims on the existence of an environmental Kuznets curve and draw linkages to the literatures on government capacity and collective action In addition the book substantially extends the state of the knowledge on the environmental implications of property rights integrating economic and political dimensions and establishing links between previously unconnected research areas in environmental politics environmental economics and resource management *Institutional Dynamics in Environmental Governance* Bas Arts, Pieter Leroy, 2006-09-09 Environmental policy in its broadest context has been significantly revitalized and renewed during the last two decades That observation is nothing new attested to by the number of publications conferences and both private and public projects that have been initiated However our understanding of the dynamics of this renewal has generally been informed by studies on single policies and projects leaving us with a limited understanding of what the newness consists of in terms of an integrated perspective This book presents fresh analyses of a number of well known cases but does so from one comprehensive view the so called policy arrangement approach Cases discussed range over organic farming integrated water management nature policy cultural heritage policy integrated region oriented policy corporate environmental management and target group policy always in search of the commonality of experience and

conclusions to be drawn in understanding the past and in formulating future perspectives *Encyclopedia of Sustainability* Robin Morris Collin, Robert William Collin, 2009-12-09 This three volume encyclopedia explores the concept of sustainability in the contexts of the environment economics and justice This expansive encyclopedia breaks new ground giving definition and focus to an urgent and much talked about topic that is extraordinarily wide ranging and all too often misunderstood As the first major reference work in its field the three comprehensive volumes span the entire scope of sustainability from ecological concepts to financial concerns to public policy and community action giving readers a solid foundation from which to think critically about efforts to make a more sustainable world The Encyclopedia of Sustainability comprises three volumes each dedicated to one of three equally important contexts in which the term is used environment and ecology business and economics and equity and fairness Each volume provides authoritative but accessible coverage of basic concepts and terms as well as policy initiatives controversies and future trends Volumes also include biographical sketches of important contributors to sustainability efforts from the scientific economic public policy and activist realms plus extensive listings of print and online resources for further exploration *Property Diversity and its Implications* John Page, 2016-08-05 Property is more diverse than is usually assumed Developing the concept of property diversity this book explores the varied role of property in placed human landscapes In acknowledging the propertied diversity about us the book highlights the paucity of our settled contemporary assumptions of property as defined by private ownership Challenging this universalizing model the book analyses how this self limiting view produces critical blind spots in modern property discourse In response it offers a re conceptualization of property that matches the grounded reality of our rich and diverse relationships with land Integrating the plurality of real property types private public and common with inclusive understandings of both interest and ownership it thus identifies and substantiates an overarching theory of property diversity Drawing on studies from numerous jurisdictions including the USA New Zealand Australia and the UK its analysis of property as something more and indeed other than a place less abstraction provides an invaluable contribution to the contemporary law and theory of property

Transboundary Governance of Biodiversity Louis J. Kotzé, Thilo Marauhn, 2014-06-26 Transboundary Governance of Biodiversity compiles critical analysis of the regulatory frameworks applicable to the transboundary governance of biodiversity by specialists from Europe and Africa Drawing on their vast experience as lawyers political scientists and natural resource management experts they provide a critique and contemporary perspectives on what has become one of the most challenging aspects of global environmental governance in the Anthropocene effective biodiversity conservation in times of unprecedented environmental crises With a unique North South focus and a legal focus infused by multi disciplinary regulatory dimensions this peer reviewed publication offers a comprehensive analysis of international and regional environmental law frameworks applicable to the transboundary governance of biodiversity **Planning, Law and Economics** Barrie Needham, 2006-09-27 This book highlights the complex financial personal legal ideological and societal

aspects of land use and how it influences and is influenced by property rights Environmental and Technology Policy in Europe G.J. Schrama, S. Sedlacek, 2013-03-09 This book contains six studies on various national environmental policies and environment oriented technology policy systems in Austria Denmark Germany the Netherlands Spain and the United Kingdom sandwiched between this introductory and a concluding chapter These studies were conducted as part of the ENVINNO research project Towards an Integration of Environmental and Ecology Oriented Technology Policy Stimulus and Response in Environment Related Innovation Networks which formed part of the Targeted Social and Economic Research TSER Programme of Directorate General XII of the European Commission now 1 Directorate General for Research We like to thank Mrs Genevieve Zdrojewski of GD Directorate General Research for her kind support of our research project The project was carried out between 1998 and 2001 by research teams from the six countries The co ordinating institute was the Department of Environmental Economics and Management at the Vienna University of 2 Economics and Business Administration At this place we want to mention all researchers involved in the ENVINNO project and we want to thank them all for their contributions to this book and the project and for the good time we have had performing the project and meeting each other at regular intervals in Vienna A Enschede NL Berlin D and Sevilla E Department of Environmental Economics and Management at the Vienna University of Economics and Business Administration in Austria Univ Prof Dr Uwe Schubert Mag Judith Kock Mag Jiirgen Mellitzer 1 Under contract number SOEI CT98 110S 2 The project website is <http://www.wu.wien.ac.at/iwwu/institute/iuwIENVINNO> **The Handbook of Environmental Voluntary Agreements** Edoardo Croci, 2005-10-06 EDOARDO CROCI IEFE Universit Bocconi Milano Italy Voluntary approaches in environmental policy represent a third wave of regulation in the environmental field Command and control was the first wave Its core is based on uniform emission standards the respect of which needs to be enforced through extensive monitoring and severe sanctions The expected cost of sanction for non compliance calculated as its amount multiplied for the probability to be caught must be superior to the benefits of non compliance in order to let the sanction be effective As the benefits of non compliance can vary among firms sanctions need to be very high in order to be effective In fact sanctions are ordinary correlated to environmental damage and not to the benefits of non compliance But very high sanctions can be difficult to enforce as they appear unfair and can lead to dramatic consequences on firms and workers up to shut downs of plants Ambient standards reduce these problems but oblige the regulator to know a huge amount of information regarding the specific contribution of each polluter to the polluted body Information is difficult to obtain because of asymmetric information and costly to produce because it requires large and skilled regulating and enforcing organizations Nevertheless complex regulation is the base of any environmental policy framework as it allows the policy maker to fully exercise its power of composition of various interests in a relatively transparent way Economic instruments were the second wave International Environmental Law and Policy in Africa B. Chaytor, K.R. Gray, 2013-11-11 C O OKID11 I welcome the opportunity to prepare a Foreword to the book on Environmental

Policy and Law in Africa edited by Kevin R Gray and Beatrice Chaytor It is a pleasure to do that because the book is a contribution to the cause of capacity building for development and implementation of environmental law in Africa a goal towards which I have had an undivided focus over the last two decades There is still some belief in and outside Africa that for developing countries in general and Africa in particular development and implementation of environmental law is not a priority This belief prevails strongly in many quarters of the industrialised countries In fact the view is held either out of blatant ignorance or by some renegade industrialists who fail to appreciate Michael Royston s 1979 thesis that Pollution Prevention Pays 2 That group for obvious reasons must have their correspondent counterparts in Africa to provide hope that industries rejected as derelict in the West or inoperable due to rigorous environmental regulation can find homes to which they can escape and dump their polluting industries

Integrated Governance and Water Basin Management Stefan Kuks,Hans Bressers,2012-11-03 This book examines water management integration in the Netherlands Belgium France Spain Italy and Switzerland based on the European research project EUWARENESS Coverage includes 12 country specific case studies examining theory on water governance institutional regimes and property rights resulting in a tool for monitoring the progress of integrated water management at the basin level in EU member states or other countries

The Evolution of National Water Regimes in Europe Stefan Kuks,Ingrid Kissling-Näf,2013-06-05 All over the world countries struggle with water stress Problems vary from water scarcity and a degrading water quality to floods and a rising sea level due to climate change The European Union adopted a Water Framework Directive to improve the sustainability of water management in its member states Water management should be coordinated at the level of river basins as a whole Interests of various user groups should be better represented River basin visions should take into account the impact of all human activities on the status of the resource Water legislation needs streamlining and more focus on its implementation The European Union advocates regulating water prices by charging the costs of water services on the basis of full cost recovery and the polluter pays principle This book examines the development of water management in the Netherlands Belgium France Spain Italy and Switzerland It is based on the European research project EUWARENESS The authors apply a theoretical framework for the analysis of institutional regimes water governance and property rights The evolution of national water resource regimes is described over a period of almost 200 years 1800 2000 The long term perspective enables the reader to see the conditions under which regime transformation and paradigm change are made possible The book also includes a critical analysis of policy making by the European Union and a comparative review and analysis of regime development in the six countries involved This book is followed by another volume published with Kluwer Academic Publishers on Integrated Governance and Water Basin Management edited by Hans Bressers and Stefan Kuks

Agriculture and Climate Beyond 2015 Floor Brouwer,Bruce A. McCarl,2006-02-20 Interactions between agriculture climate and patterns of land use are complex Major changes in agriculture and land use patterns are foreseen in the next couple of decades in response to shifts in climate

greenhouse gas management initiatives population growth and other forces The book explores key interactions between changes in agriculture patterns of land use and efforts to reduce greenhouse emissions from agriculture The volume is based on inter disciplinary science and policy interactions exploring the way land use may aid in addressing or be affected by the onset of climate change and alterations in food demand Future forces shaping land use decisions are examined and its sensitivity to climate change is highlighted Patterns of land use and the agricultural role in climate change mitigation are explored Also policy and social responses to the new perspectives on future land use patterns are identified The perspective of the book is beyond the year 2015

Coping with Water Deficiency Phoebe Koundouri, 2007-11-28 Research results discussed in this book demonstrate that effective water management tools and decision making practices are needed to support interventions to increase availability and manage demand for scarce water supplies Furthermore the book bridges the gap between ideas and actions endorsed in the research oriented environmental debate and their translation into policymaking structures and programs in developed and developing countries

Governance of Water-Related Conflicts in Agriculture F.M. Brouwer, I. Heinz, T. Zabel, 2013-03-14 This book deals with voluntary approaches between farmers and water suppliers as an instrument to meet environmental standards impacted by agricultural activities more economically efficient and environmentally effective than by exclusive application of alternative instruments including command and control approaches The book is based largely on the results of the research project Co operative Agreements in Agriculture as an Instrument to Improve the Economic Efficiency and Economic Effectiveness of the European Water

Policy which was supplemented for specific issues by key experts The research was partly funded by the European Commission under the Specific RTD Programme in the Field of Environment and Climate Contract No ENV4 CT98 0782 and partly by the Ministry of Agriculture Nature Management and Fisheries in the Netherlands the Environment Agency in England and Wales the UK Ministry of Agriculture Fisheries and Food and the Government of the German Bundesland North Rhine Westphalia Additional funds for preparing the book were obtained from the Ministry of Agriculture Nature Management and Fisheries in the Netherlands The financial and technical support received from the different organisations is gratefully acknowledged The editors appreciate very much the efforts the authors have made in preparing their contributions for the book and for the secretarial assistance provided by Mrs Tessa van Dongen from LEI who took responsibility for guiding the publication process and preparing the chapters of the book We also appreciate the support given by Mrs Henny Hoogervorst and Mrs Gloria Verhey Kluwer Academic Publishers

Decision Making for Complex Socio-Technical Systems Thomas Flüeler, 2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution

Sustainable Protein Production and Consumption: Pigs or Peas? Harry Aiking, Joop de Boer, Johan Vereijken, 2006-02-23 Sustainable Protein Production and Consumption Pigs or Peas is a book that presents and explores the PROFETAS programme for development of a more sustainable food system by studying the feasibility of substituting meat with plant based alternatives The emphasis is on improving the food system by reducing the use of energy land and freshwater at the same time limiting the impacts on health and animal welfare associated with intensive livestock production It is clear that such a new perspective calls not only for advanced environmental and technological research but also for in depth societal research as the acceptance of new food systems is critically contingent on perceptions and attitudes of modern consumers In this unique multidisciplinary setting PROFETAS has opened up pathways for a major transition in protein food production and consumption not by just analyzing the food chain but rather by exploring the entire agricultural system

including biomass for energy production and the use of increasingly scarce freshwater resources The study presented here is intended to benefit every stakeholder in the food chain from policymakers to consumers and it offers guiding principles for a transition towards an ecologically and socially sustainable food system from a multi level perspective The Impact of Climate Change on Drylands Ton Dietz,R. Ruben,A. Verhagen,2004-06-22 People have learned to adapt to risk and uncertainty in fragile dryland environments Law of the Sea, Environmental Law and Settlement of Disputes Tafsir Malick Ndiaye,Rüdiger Wolfrum,2007-11-30 This volume covers a variety of topics in the fields of the law of the sea and the protection of the environment The particular focus of the volume is on the role and function of judicial quasi judicial and administrative institutions in the prevention and settlement of disputes in both of these areas This includes an overview and insightful analysis of the cases of the International Tribunal for the Law of the Sea during its first decade Further substantive issues range from the allocation of shared marine resources maritime boundary delimitation and issues of maritime security to the prevention of marine pollution as well as a coverage of the compliance and enforcement mechanisms of international environmental law The views from both scholars and practitioners perspectives presented in this volume will offer readers a number of outstanding intellectual synergies to reflect on the development of international law It can provide both scholars and policy makers alike with new insights on how to address pressing problems in international law including ideas for improved institutional design The work has been compiled in honour of Thomas A Mensah and comprises 59 essays from leading scholars and practitioners in international law
