Handbook Of Ecological Restoration Principles Of Restoration:

Handbook of Ecological Restoration Martin R. Perrow,Anthony J. Davy,2002-09-05 The two volumes of this handbook provide a comprehensive account of the emerging and vibrant science of the ecological restoration of both habitats and species Ecological restoration aims to achieve complete structural and functional self maintaining biological integrity following disturbance In practice any theoretical model is modified by a number of economic social and ecological constraints Consequently material that might be considered as rehabilitation enhancement reconstruction or re creation is also included Restoration in Practice provides details of state of the art restoration practice in a range of biomes within terrestrial and aquatic marine coastal and freshwater ecosystems Policy and legislative issues on all continents are also outlined and discussed The accompanying volume Principles of Restoration defines the underlying principles of restoration ecology The Handbook of Ecological Restoration will be an invaluable resource to anyone concerned with the restoration rehabilitation enhancement or creation of habitats in aquatic or terrestrial systems throughout the world

Routledge Handbook of Ecological and Environmental Restoration Stuart K. Allison,Stephen D. Murphy,2017-05-18 Ecological restoration is a rapidly evolving discipline that is engaged with developing both methodologies and strategies for repairing damaged and polluted ecosystems and environments During the last decade the rapid pace of climate change coupled with continuing habitat destruction and the spread of non native species to new

habitats has forced restoration ecologists to re evaluate their goals and the methods they use This comprehensive handbook brings together an internationally respected group of established and rising experts in the field The book begins with a description of current practices and the state of knowledge in particular areas of restoration and then identifies new directions that will help the field achieve increasing levels of future success Part I provides basic background about ecological and environmental restoration Part II systematically reviews restoration in key ecosystem types located throughout the world In Part III management and policy issues are examined in detail offering the first comprehensive treatment of policy relevance in the field while Part IV looks to the future Ultimately good ecological restoration depends upon a combination of good science policy planning and outreach all issues that are addressed in this unrivalled volume

Ecological Restoration Andre F. Clewell, James Aronson, 2012-07-26 The field of ecological restoration is a rapidly growing discipline that encompasses a wide range of activities and brings together practitioners and theoreticians from a variety of backgrounds and perspectives ranging from volunteer backyard restorationists to highly trained academic scientists and professional consultants Ecological Restoration offers for the first time a unified vision of ecological restoration as a field of study one that clearly states the discipline's precepts and emphasizes issues of importance to those involved at all levels In a lively personal fashion the authors discuss scientific and practical aspects of the field as well as the human needs and values that motivate practitioners The book identifies fundamental concepts upon which restoration is based considers the principles of restoration practice explores the diverse values that are fulfilled with the restoration of ecosystems reviews the structure of restoration practice including the various contexts for restoration work the professional development of its practitioners and the relationships of restoration with allied fields and activities A unique feature of the book is the inclusion of eight virtual field trips short photo essays of project sites around the world that illustrate various points made in the book and are led by those who were intimately involved with the project described Throughout ecological restoration is conceived as a holistic endeavor one that addresses issues of ecological degradation biodiversity loss and sustainability science simultaneously and draws upon cultural resources and local skills and knowledge in restoration work

Recarbonizing global soils - A technical manual of recommended management practices Food and Agriculture Organization of the United Nations, Intergovernmental Technical Panel on Soils, 2021-09-08 During the last decades soil organic carbon SOC attracted the attention of a much wider array of specialists beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth's climate system which has a great potential to be managed by humans Soils as a carbon pool are one of the key factors in several Sustainable Development Goals in particular Goal 15 Protect restore and promote sustainable use of terrestrial ecosystems sustainably manage forests combat desertification and halt and reverse land degradation and halt biodiversity loss with the SOC stock being explicitly cited in Indicator 15.3.1 This technical manual is the first attempt to gather in a standardized format the existing data on the impacts of the main soil management practices

on SOC content in a wide array of environments including the advantages drawbacks and constraints This manual presents different sustainable soil management SSM practices at different scales and in different contexts supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications Volume 5 includes 24 practices that have a direct impact on SOC sequestration and maintenance in forestry wetlands and urban soils

Research Handbook on Fundamental Concepts of Environmental Law Douglas Fisher, 2022-11-25 This expanded and updated Research Handbook delivers an authoritative and in depth guide to the conceptual foundations of environmental law It offers a nuanced reflection on the underlying principles by exploring issues such as human rights constitutional rights sustainable development and environmental impact assessment within the context of environmental law

Fifty Years of Invasion Ecology David M. Richardson, 2011-02-23 Invasion ecology is the study of the causes and consequences of the introduction of organisms to areas outside their native range Interest in this field has exploded in the past few decades Explaining why and how organisms are moved around the world how and why some become established and invade and how best to manage invasive species in the face of global change are all crucial issues that interest biogeographers ecologists and environmental managers in all parts of the world This book brings together the insights of more than 50 authors to examine the origins foundations current dimensions and potential trajectories of invasion ecology It revisits key tenets of the foundations of invasion ecology including contributions of pioneering naturalists of the 19th century including Charles Darwin and British ecologist Charles Elton whose 1958 monograph on invasive species is widely acknowledged as having focussed scientific attention on biological invasions

Standards of practice to guide ecosystem restoration Nelson, C.R., Hallett, J.G., Romero Montoya, A.E., Andrade, A., Besacier, C., Boerger, V., Bouazza, K., Chazdon, R., Cohen-Shacham, E., Danano, D., Diederichsen, A., Fernandez, Y., Gann, G.D., Gonzales, E.K., Gruca, M., Guariguata, M.R., Gutierrez, V., Hancock, B., Innecken, P., Katz, S.M., McCormick, R., Moraes, L.F.D., Murcia, C., Nagabhatla, N., Pouaty Nzembialela, D., Rosado-May, F.J., Shaw, K., Swiderska, K., Vasseur, L., Venkataraman, R., Walder, B., Wang, Z., Weidlich, E.W.A., 2024-02-02 The United Nations Decade on Ecosystem Restoration 2021 2030 hereafter UN Decade aims to prevent halt and reverse ecosystem degradation and recover biodiversity and ecosystem integrity enhance human health and well being including sustainable delivery of ecosystem goods and services and mitigate climate change To create a shared vision of ecosystem restoration UN Decade partners through a consultative process launched ten principles for achieving the highest level of recovery possible through restoration projects To facilitate application of these principles and thereby maximize restoration outcomes for nature and people the Standards of practice to guide ecosystem restoration provide key recommendations for all phases of restoration projects These recommendations are applicable to the broad array of restorative activities included as ecosystem restoration under the UN Decade across all types of ecosystems urban production cultural semi natural and natural and restoration projects from voluntary community

member led efforts to highly resourced nationally funded projects *Recovering Caribbean Nature* James A. Kushlan, Kirsten Hines, 2024-10-29 The Caribbean is a global biodiversity hotspot half its resident bird species are found nowhere else yet a quarter are threatened with extinction Nearly all its native amphibians and reptiles and thousands of plants also are endemic Yet less than 1% of the landscape can be considered natural and apart from reserves most land is privately owned Despite the challenges of such habitat fragmentation the Caribbean's distinctive fauna and flora can be preserved through planning and managing a connected network of sustainable naturalistic landscapes reserves parks and private gardens This book uniquely provides both a theoretical background and practical applications to restoring nature within the tropical Caribbean Packed with beautiful color photographs it offers unifying principles that can be applied across the tropics and synthesizes information on the Caribbean's environmental uniqueness and globally significant biodiversity It also provides explicit guidance on establishing sustainable and more naturalistic landscapes from large public lands to private yards and gardens The book is essential reading for academics and researchers studying the Caribbean environment resource management professionals and scientists and educators from nongovernmental organizations who provide programs and advocacy for conservation and regional sustainability Moreover it highlights the importance of private lands and gardens where the greatest gains can be made and so offers a handbook for knowledgeable private landowners and their professional advisors Intelligent Tinkering Robert J. Cabin, 2011-08-03 Restoring paradise Toward a more perfect union the science practice gap Bridging the science practice gap intelligent tinkering Tropical Island Recovery Michael Samways, Peter Hitchins, Dr Orty Bourquin, Dr Jock Henwood, 2010-04-29 Tropical island species and ecosystems are threatened worldwide as a result of increasing human pressure Yet some of these islands also lend themselves to restoration as they are physically defined units that can be given focused attention as long as resources are available and clear conservation targets are set Cousine Island Seychelles is a tropical island that has received such intensive restoration From a highly degraded island in the 1960s the island has now been restored to what is believed to be a semblance of the natural state All alien vertebrates have been eradicated as have 25 invasive alien plants Cultivated plants are now confined to one small section of the island Poaching of nesting marine turtles has been stopped leading to an increase in turtle breeding numbers The shearwater population has increased in size with poaching activities under control The Sooty tern has also returned to the island to breed The coastal plateau has been restored with over 2500 indigenous shrubs and trees which have now grown into a forest carpet There are strict quarantine procedures on the island keeping it free of rats mice various alien invertebrates and potentially invasive alien plants Three threatened Seychelles endemic land birds Seychelles warbler Seychelles magpie robin and Seychelles white eye have been introduced and are thriving with these introductions contributing to both the magpie robin and the white eye being downgraded from CR to EN the warbler remains at VU Ecotourism and nature conservation for the local inhabitants have been introduced in a way that does not reduce the improved compositional structural and functional

biodiversity of the island The result of the restoration effort appears to be sustainable in the long term although challenges still remain especially with regards to adequate clean water and a non polluting power supply on the island Cousine is thus paving the way in the art and science of tropical island restoration as a legacy for future generations There is no other book available on this case study The need for the book arises from the fact that here is a positive note for conservation in these times of so much negative news on the state of our environment More importantly the book shows how such restoration should be done and is therefore a model for many other islands around the world The book has many illustrations so as to give the book wide appeal and literally to show what can be done in terms of restoration All this is based on much scientific detail including many new data The aim is by way of example to demonstrate how practical restoration based on sound scientific research can be carried out for the betterment of ecological integrity and ecosystem health

Restoration of Ecosystems – Bridging Nature and Humans Stefan Zerger, 2023-02-13 In this interdisciplinary textbook which bridges the gap between the natural and social sciences both the scientific principles of restoration ecology and practical aspects of ecosystem restoration are comprehensively presented The diversity of land use types with a focus on Central Europe is highlighted and case studies of practical restoration projects are presented The textbook offers students who deal with the environment as well as scientists and practitioners a profound and up to date but also critical overview of the state of knowledge This book opens up the broad spectrum of degraded ecosystems of Central European natural and cultural landscapes In further chapters marine ecosystems and their restoration as well as development potentials and the limits of restoration are discussed in more detail The ecological fundamentals are expanded through an interdisciplinary perspective taking into account environmental ethics sociology anthropology and economics In addition to an up to date overview of the various areas and fields of activity in restoration ecology and ecosystem restoration the textbook provides a valuable basis for studies science and practice The students also receive assistance in searching for literature and critical fact analysis and the lecturers on teaching formats and interdisciplinary approaches to discussion in restoration ecology

River Channel Management Peter Downs, Ken Gregory, 2014-02-24 River Channel Management is the first book to deal comprehensively with recent revolutions in river channel management It explores the multi disciplinary nature of river channel management in relation to modern management techniques that bear the background of the entire drainage basin in mind use channel restoration where appropriate and are designed to be sustainable River Channel Management is divided into five sections The Introduction outlines the need for river channel management Retrospective Review offers an overview of twentieth century engineering methods and the ways that river channel systems operate Realisation explains how greater understanding of river channel adjustments channel hazards and river basin planning created a context for twenty first century management Requirements for Management explains and examines environmental assessment restoration based approaches and methods that work towards design with nature Final Revision speculates about prospects for twenty first century river channel management

River Channel Management is written for higher level undergraduates and for postgraduates in geography ecology engineering planning geology and environmental science for professionals involved in river channel management and for staff in environmental agencies

Dynamic Aquaria Walter H. Adey, Karen Loveland, 2011-08-29 In its third edition this praised book demonstrates how the living systems modeling of aquatic ecosystems for ecological biological and physiological research and ecosystem restoration can produce answers to very complex ecological questions Dynamic Aquaria further offers an understanding developed in 25 years of living ecosystem modeling and discusses how this knowledge has produced methods of efficiently solving many environmental problems Public education through this methodology is the additional key to the broader ecosystem understanding necessary to allow human society to pass through the next evolutionary bottleneck of our species Living systems modeling as a wide spectrum educational tool can provide a primary vehicle for that essential step This third edition covers the many technological and biological developments in the eight plus years since the second edition providing updated technological advice and describing many new example aquarium environments Includes 16 page color insert with 57 color plates and 25% new photographs Offers 300 figures and 75 tables New chapter on Biogeography Over 50% new research in various chapters Significant updates in chapters include The understanding of coral reef function especially the relationship between photosynthesis and calcification The use of living system models to solve problems of biogeography and the geographic dispersal and interaction of species populations The development of new techniques for global scale restoration of water and atmosphere The development of new techniques for closed system sustainable aquaculture

Biosecurity Andrew Dobson, Kezia Barker, Sarah L. Taylor, 2013-08-15 Biosecurity is the assessment and management of potentially dangerous infectious diseases quarantined pests invasive alien species living modified organisms and biological weapons It is a holistic concept of direct relevance to the sustainability of agriculture food safety and the protection of human populations including bio terrorism the environment and biodiversity Biosecurity is a relatively new concept that has become increasingly prevalent in academic policy and media circles and needs a more comprehensive and inter disciplinary approach to take into account mobility globalisation and climate change In this introductory volume biosecurity is presented as a governance approach to a set of concerns that span the protection of indigenous biological organisms agricultural systems and human health from invasive pests and diseases It describes the ways in which biosecurity is understood and theorized in different subject disciplines including anthropology political theory ecology geography and environmental management It examines the different scientific and knowledge practices connected to biosecurity governance including legal regimes ecology risk management and alternative knowledges The geopolitics of biosecurity is considered in terms of health biopolitics and trade governance at the global scale Finally biosecurity as an approach to actively secure the future is assessed in the context of future risk and uncertainties such as globalization and climate change

Ecology - Volume I Antonio Bodini , Stefan Klotz, 2009-10-20 Ecology is a component of Encyclopedia of Environmental and Ecological

Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Ecology is the study of the interrelationships between living organisms and their environment The term ecology was introduced by Ernst Haeckel at the end of the nineteenth century Since that time spectacular advances have been made Much has been learned about the relationship between organisms and environmental factors and about the processes that regulate the abundance and distribution of species The Theme on Ecology with contributions from distinguished experts in the field discusses the Science of Ecology for a Sustainable World The two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Handbook of Regenerative Landscape Design Robert L. France, 2007-10-18 What if environmentally damaged landscapes could not only be remediated from an ecological standpoint but also designed to replenish an entire community as well as the nature surrounding it The Handbook of Regenerative Landscape Design incorporates ecology engineering sociology and design elements into a new paradigm for environmental r

The Palgrave Handbook of Environmental Policy and Law Robert C. Brears, Jade Lindley, 2025-09-01 The Palgrave Handbook of Environmental Policy and Law provides readers with information on developments in the two fields of environmental policy and environmental law in both developed and developing countries In particular the Handbook analyses policies and statutes used at the local regional national and international level in locations of differing climates governance and levels of development that aim to protect the environment and ensure ecologically sustainable development Furthermore the Handbook not only examines the substance of these policies and laws but also enforcement challenges alternative legal mechanisms for advancing environmental policies the role of market based instruments in addressing environmental problems and constitutional restrictions on environmental regulation
