Mental State Defences in Criminal Law Steven Yannoulidis, 2016-04-22 By defining appropriate boundaries for the defence of insanity and the doctrine of automatism this book presents a consistent and principled approach to the reform of mental state defences In particular by undertaking an interdisciplinary analysis of the various factors that inform these defences the book concludes with several practical and robust reform proposals There are three objectives that underpin the suggested reform proposals First to ensure that an accused will be able to raise a defence of insanity for involuntary conduct arising from mental disorder even where he or she is aware of the nature and quality of such conduct Second to provide principled means by which to establish the criminal responsibility of an accused for conduct performed in a state of drug induced psychosis Third to ensure that criminal conduct arising from a state of impaired consciousness does not automatically result in the outright acquittal of an accused In articulating the competing demands that must be balanced in order to secure a principled approach to the reform of mental state defences the book will be of relevance to all common law countries

Eyewitness Memory Charles P. Thompson, Douglas J. Herrmann, J. Don Read, Darryl Bruce, David G. Payne, 2014-03-05 The organization of the first Society for Applied Research in Memory and Cognition SARMAC conference centered around two specifically identifiable research topics autobiographical memory and eyewitness memory These two areas long time staples on the menu of investigators of memory in more natural settings differ on a variety of dimensions perhaps most notably on their specific goals for scientific inquiry and application For many questions about memory and cognition that are of interest to scientific psychology there have been historical as well as rather arbitrary reasons for their assignment to the autobiographical or eyewitness memory fields Perhaps as a result of differing historical orientations the first volume's seven autobiographical memory chapters focus upon the qualities or types of recall from research participants whereas the seven chapters in the eyewitness memory volume generally focus upon the quantity a concern for completeness and accuracy of recall This interest in the ultimate end product and its application within the legal process in general encourages eyewitness memory investigators to modify their testing procedures continually in an attempt to gain even more information from participants about an event Indeed several of the eyewitness memory chapters reflect such attempts Beyond the specific contributions of each chapter to the literature on autobiographical and eyewitness memory the editors hope that the reader will come away with some general observations the autobiographical and eyewitness memory fields are thriving these two fields are likely to remain center stage in the further investigation of memory in natural contexts although the autobiographical and eyewitness memory chapters have been segregated in these two volumes the separation is often more arbitrary than real and connections between the two areas abound the two research traditions are entirely mindful of fundamental laboratory methods research and theory sometimes drawing their research inspirations from that quarter and the two fields though driven largely by everyday memory concerns can contribute to a more basic understanding of memory at both an empirical and a theoretical level
