## **Handbook Of Enology:**

Handbook of Enology, Volume 1 Pascal Ribéreau-Gayon, Denis Dubourdieu, B. Donèche, A. Lonvaud, 2006-05-01 The Microbiology volume of the new revised and updated Handbook of Enology focuses on the vinification process. It describes how yeasts work and how they can be influenced to achieve better results. It continues to look at the metabolism of lactic acid bacteria and of acetic acid bacteria and again how they can be treated to avoid disasters in the winemaking process and how to achieve optimal results. The last chapters in the book deal with the use of sulfur dioxide, the grape and its maturation process, harvest and pre-fermentation treatment and the basis of red, white and speciality wine making. The result is the ultimate text and reference on the science and technology of the vinification process, understanding and dealing with yeasts and bacteria involved in the transformation from grape to wine. A must for all serious students and practitioners involved in winemaking.

Handbook of Enology, Volume 2 Pascal Ribéreau-Gayon, Yves Glories, Alain Maujean, Denis Dubourdieu, 2021-04-13 As an applied science, Enology is a collection of knowledge from the fundamental sciences including chemistry, biochemistry, microbiology, bioengineering, psychophysics, cognitive psychology, etc., and nourished by empirical observations. The approach used in the Handbook of Enology is thus the same. It aims to provide practitioners, winemakers, technicians and enology students with foundational knowledge and the most recent research results. This knowledge can be used to contribute to a better definition of the quality of grapes and wine, a greater understanding of chemical and microbiological parameters with the aim of ensuring satisfactory fermentations and predicting the evolution of wines and better mastery of wine stabilization processes. As a result, the purpose of this publication is to guide readers in their thought processes with a view to preserving and optimizing the identity and taste of wine and its aging potential. This third English edition of The Handbook of Enology is an enhanced translation from the 7th French 2017 edition and is published as a two-volume set describing aspects of winemaking using a detailed scientific approach. The authors, who are highly respected enologists, examine winemaking processes, theorizing what constitutes a perfect technique and the proper combination of components necessary to produce a quality vintage. They also illustrate methodologies of common problems, revealing the mechanism behind the disorder, thus enabling a diagnosis and solution.

**Volume 2: The Chemistry of Wine and Stabilization and Treatments** looks at the wine itself in two parts. Part One analyzes the chemical makeup of wine, including organic acids, alcoholic volatile and phenolic compounds, carbohydrates and aromas. Part Two describes the procedures necessary to achieve a perfect wine, the clarification processes of fining, filtering and centrifuging, stabilization and aging. Coverage includes Wine chemistry, Organic acids, Alcohols and other volatile products, Carbohydrates, Dry extract and mineral matter, Nitrogen substances, Phenolic compounds, The aroma of grape varieties, The chemical nature, origin and consequences of the main organoleptic defects, Stabilization and treatment of wines, The chemical nature, origin and consequences of the main organoleptic defects, The concept of clarity and colloidal phenomena, Clarification and stabilization treatments, Clarification of

wines by filtration and centrifugation The stabilization of wines by physical processes The aging of wines in vats and in barrels and aging phenomena The target audience includes advanced viticulture and enology students professors and researchers and practicing grape growers and vintners Handbook of Enology, Volume 2 Pascal Ribéreau-Gayon,Yves Glories,Alain Maujean,Denis Dubourdieu,2006-05-01 The Handbook of Enology Volume 2 The Chemistry of Wine Stabilization and Treatments uniquely combines chemical theory with the descriptions of day to day work in the latter stages of winemaking from clarification and stabilization treatments to ageing processes in vats and barrels The expert authors discuss Compounds in wine such as organic acids carbohydrates and alcohol Stabilization and treatments The chemical processes taking effect in bottled wine The information provided helps to achieve better results in winemaking providing an authoritative and complete reference manual for both the winemaker and the student Handbook of Enology, Volume 1 Pascal Ribéreau-Gayon,Denis Dubourdieu,Bernard B.
