**International Perspectives on the Design of Technology-supported Learning Environments** Stella Vosniadou, Erik De Corte, Robert Glaser, Heinz Mandl, 2012-10-12 In recent years the use of technology for the purposes of improving and enriching traditional instructional practices has received a great deal of attention However few works have explicitly examined cognitive psychological and educational principles on which technology supported learning environments are based This volume attempts to cover the need for a thorough theoretical analysis and discussion of the principles of system design that underlie the construction of technology enhanced learning environments It presents examples of technology supported learning environments that cover a broad range of content domains from the physical sciences and mathematics to the teaching of language and literacy The emphasis in this book is not on the design of educational software but on the design of learning environments A great deal of research on learning and instruction has recently moved out of the laboratory into the design of applications in instructional settings By designing technology supported learning environments instructional scientists attempt to better understand the theories and principles that are explicit in their theories of learning The contributors to this volume examine how factors such as social interaction the creation of meaningful activities the use of multiple perspectives and the construction of concrete representations influence the acquisition of new information and transfer

The Evolution of American Educational Technology Paul Saettler, 2004-03-01 The primary purpose of this book is to trace the theoretical methodological foundations of American educational technology It must be emphasized that this work is essentially as history of the process of educational technology rather than of products in the form of devices or media Although media have played an important role in educational technology the reader should not lose sight of the central process which characterizes and underlies the true historical meaning and function of educational technology Moreover the assumption is made that all current theory methodology and practice rests upon the heritage of the past Indeed a common problem in the field has been the failure in many instances to take adequate account of past history in planning for the

present or the future A related purpose of this book is to provide a selective survey of research in educational technology as it relates to the American public schools Such research reviews are not intended to be comprehensive but were included because of their historical importance and their relevance in understanding the process of educational technology
