**Geriatric Medicine** Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja Rosen, 2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by

interdisciplinary and interprofessional experts in geriatric medicine      **Manual of Geriatric Medicine** Tischa J. M. Hwang, Maura Kennedy, Don Melady, Vaishal Tolia, Scott Wilbur, 2016-05-19 The elderly represent the fastest growing segment of the population in developed countries reflected in the patient population presenting to EDs and hospitals. These patients more often than not have greater comorbidities, more complicated workups, and utilize more laboratory and radiologic services. This text is designed to teach emergency physicians how best to care for this specific demographic of patients. It addresses physiologic changes, high risk conditions, and atypical presentations associated with elderly patients in the ED that result in frequent misdiagnosis or delays in diagnosis. It instructs the readers how best to care for elderly patients in order to minimize morbidity and mortality, addressing some of the difficult psychosocial issues that confront health care providers that care for elderly patients such as psychiatric disease and end of life care. The utility of this text is not limited to emergency physicians but it should be useful to all health care providers involved in the treatment of elderly patients with acute medical or surgical conditions. **Technical Manual** United States Department of the Army, 1970

Lee, Jane F. Potter, G. Michael Harper, 2021-08-31 This book aims to be a single point of reference for advances in the care of geriatric populations across medical and surgical specialties. The aging population is a unique demographic with its own health challenges. practices of many medical and surgical specialists are dominated by older patients who may themselves see many specialists but rarely visit geriatricians This updated edition elucidates the most common medical conditions seen in aging patients and translates approaches to those conditions for physicians across specialties Divided into three sections that assemble crosscutting issues medical specialties and surgical and related specialties this book serves as a guide for clinicians of all backgrounds who will work with older patients as the demographic ages further This second edition of Geriatrics for Specialists expands the number of specialist chapters to reflect growth in research in aging and clinical care for older people in dermatology plastic surgery and behavioral neurology All original chapters from the first edition are extensively revised and updated to reflect the rapid growth of new knowledge in the field

**Principles and Practice of Geriatric Surgery** Ronnie Ann Rosenthal, Michael E. Zenilman, Mark R. Katlic, 2011-07-12

In the preface to this impressive and well produced book the editors state that their aim is not to describe a new surgical specialty since most surgeons will soon need to be geriatric surgeons but to assemble a comprehensive account that will allow all providers of healthcare to the elderly to understand the issues involved in choosing surgery as a treatment option for their patients. This is a useful book that deserves to do well. I hope that the editors and their publisher will have the stamina to make this the first of several editions as it is clear that updated information about surgery in the elderly will be required to keep pace with this important field.
