Instructions for Using the *PMF* CD-ROM Software

The *PMF* CD-ROM contains three applications: the *PMF Tutor*, the *PMF Problem-Solver*, and the *PMF Excel Spreadsheet Templates*. These solutions are designed to run on any computer running Windows 98, ME, NT 4.0, 2000, or XP and Microsoft Excel version 97, 2000, or XP or higher. Be sure to visit the book's Web site at <http://www.aue.com/giftman> to see if any updates have been made to this software since the book was published.

For your convenience, chapter and section references are shown on the screen for each associated computation in the *Problem-Solver* and the *Tutor*. As noted in the text preface as well as in Chapter 1, applicability of the software throughout the text and the study guide is keyed to related text discussions, end-of-chapter problems, and end-of-chapter and end-of-part cases by icons for all of the computational routines. Thus you can integrate the procedures on the disk with the corresponding text discussions.

What Is the *PMF Tutor*?

The *PMF Tutor* is an Excel workbook containing a collection of managerial finance problem types with the problems varied by random-number generation. Its purpose is to give you an essentially unlimited number of problems to work through so that you can practice until you are satisfied that you understand a concept. In using the *Tutor*, the following sequence should produce the best results:

1. **Work the problem first yourself.** It is tempting to save time by letting the computer solve the problem for you and then studying the computer's answer. You won't learn much that way. Even if you make mistakes when you try the problem on your own, you will learn from those mistakes.

Hydrology and Water Management Gert A. Schultz, Edwin T. Engman, 2012-12-06 The authors of this book have been approached by consulting engineers You know about remote sensing and thus you can obtain hydrological information where no data exist even without ground measurements so that I can design the required capacity of a drinking water supply reservoir in a developing country On the other hand the authors have been told Remote sensing is not of much use since it is still impossible to estimate ground water resources or surface water flows from remote sensing data The major aim of this book is to correct such unjustified illusions as well as exaggerated criticism by providing the reader with sound information on the potential and the limitations of remote sensing in the field of hydrology and water management The book is meant to be a reference and text it is not a collection of papers from some meeting The book is intended to provide methods to help the readers solve their own problems in hydrology and water management Therefore scientific issues are presented only as far as they are necessary for the application of remote sensing The reader will see that in some fields e g evapotranspiration soil moisture hydrological modeling the scientific development is still on the way while in others operational techniques are already available e g snow melt run off model land use classification and detection of land use changes flood forecasting and control Commerce Business Daily ,1998-05

Project Woksape Renee A. Holoien, 1989 Diode Laser Materials and Devices - A Worldwide Market and Technology Overview to 2005 R. Szweda, 2001-12-20 This report examines the development of the diode laser industry over a six year period 2000 to 2005 incorporating analysis of trends in markets technologies and industry structure It is designed to provide key information to users and manufacturers of substrates epitaxial wafers epiwafers and devices The coverage includes components laser diodes and the semiconducting SC wafers and epiwafers on which most of these devices are made The geographical coverage of the report includes North America Japan and Europe which together will account for over 90% of the production and consumption of diode laser materials and devices over the next five years However many other countries have activities in this field including South East Asia Taiwan South Korea Singapore Malaysia etc China India Australia and Eastern Europe Russia Poland Hungary the Czech Republic amongst others Activities in these countries are commented on in the text where relevant but are not quantified in the market data Chapter 1 is an introduction to the market study Chapter 2 contains an executive summary Chapter 3 overviews materials markets The size quality and particularly the price of substrates and wafers are key factors in determining the ability of companies to produce competitive laser products Chapter 3 also examines trends in materials technologies for laser diodes the impact of the device markets on wafer demand and the main suppliers This chapter introduces the semiconductor materials that are presently or will likely become important to the fabrication of diode laser devices The principal distinguishing properties of these materials are explained with reference to their application Chapter 4 chapter examines the basic application sectors for laser diode devices as well as the basic commercial opportunities changes and forces acting within each sector The chapter also examines the market for the basic types of device as well as the promising newer types

For each type of device market data and forecasts are provided and future prospects described The application data are presented for the following industrial groups Automotive Computers Consumer Industrial Military and Aerospace Telecommunications Others A full 5 year forecast and analysis is provided by application and region Chapter 5 is a technology overview In this chapter a background and overview of developments in the principal technological R D and production processes for devices is provided The main focus is on the most important enabling technology for the production of the present and future generations of laser diodes and related devices This process is crystal growth and involves the following sequence Bulk growth of single crystals Epitaxial growth of semiconductor single crystal layers Ion implantation Device fabrication ie gate and contact formation etc Packaging test Chapter 6 profiles substrate suppliers epiwafers suppliers and merchant and captive producers of GaAs devices Chapter 7 lists universities and selected industrial labs involved in the areas of diode laser research Chapter 8 is a directory of suppliers Chapter 9 provides acronyms and exchange rates
