French Military Aviation:

A History of French Military Aviation Charles Christienne, Pierre Lissarrague, 1986 **The Rise and Fall of the French Air Force** Greg Baughen, 2018-04-17 On 10 May 1940 the French possessed one of the largest air forces in the world On paper it was nearly as strong as the RAF Six weeks later France had been defeated For a struggling French Army desperately looking for air support the skies seemed empty of friendly planes In the decades that followed the debate raged Were there unused stockpiles of planes Were French aircraft really so inferior Baughen examines the myths that surround the French defeat He explains how at the end of the First World War the French had possessed the most effective air force in the world only for the lessons learned to be forgotten Instead air policy was guided by radical theories that predicted air power alone would decide future wars Baughen traces some of the problems back to the very earliest days of French aviation He describes the mistakes and bad luck that dogged the French efforts to modernise their air force in the twenties and thirties He examines how decisions made just months before the German attack further weakened the air force Yet defeat was not inevitable If better use had been made of the planes that were available the result might have been different

French Aircraft in the First World War Vital Ferry, 2015-01-31 During the cradle of aviation at the beginning of the Great War France had access to only a few dozen military aircraft with a staff who didn't quite know what to do with them However during the course of the conflict the embryonic Air Force dedicated to the creation of reconnaissance and bombing missions evolved like wildfire to the point that by the Armistice of 11 November 1918 French military aviation had become one of the world's most powerful as a result of the construction of 10 000 aircraft spread throughout nearly 300 squadrons Having become the first nation equipped with an air force the French aviation industry in its infancy before the war had been able to produce in four years 50 000 aircraft many of which would go on to support a number of her allies including Britain Russia and especially the United States This book provides a comprehensive overview of the evolution of the French Air Force from 1914 to 1918 through a historical narrative peppered with anecdotes and illustrated with many unpublished pictures from the period and profiles of the most iconic devices The work is complete with full specifications of aircraft built and used by France during the four years of the Great War French military aviation Paul A. Jackson, 1979 *Military Aviation of the First World War* Alan Sutton, Alan C. Wood, 2017-04-21 over 470 black and white photographs This beautifully illustrated book provides details of every power that took part in Military aircraft activity during the First World War The war was a global conflict with 57 nations involved but with aviation being in its infancy only eight nations had a major air arm to their fighting Services The Allies Britain America Italy Belgium France and Russia and then the Central Powers comprising Germany and Austria Hungary The book covers the formation establishment and wartime exploits of all the major air powers during the war as well as providing thumbnail sketches of all the major aces for each country giving full coverage to The Allies The Royal Flying Corps The French Military Air Service The United States Air Service Aeronautica de Regio Esercito Italy The

Belgian Air Arm The Russian Imperial Air Services The Central Powers The Imperial German Air Service and the Austro Hungarian flying service However smaller powers at the time like Australia Canada and Japan as well as Portugal Serbia Romania and South Africa are all featured in this fascinating book The Birth of Military Aviation Hugh Driver, 1997 A survey of the development of British military aviation from 1903 to 1914 revealing the consequences of its annexation by the state as a branch of armaments as an underlying cause of aircraft inadequacies on the outbreak of war A mine of information drawing on an impressive range of archives It will become an important point of reference **ENGLISH HISTORICAL REVIEW** This book aims to demonstrate how the crisis evident in British military aviation in the early years of the First World War was inherent in the entire development of aviation in the years preceding the conflict After outlining the work of the early pioneers and the growth of an aviation industry as a branch of armaments Dr Driver considers the objectives of the War Office in increasingly seeking to divert design development to their research establishment at Farnborough He shows how the resultant virtual state monopoly in design and procurement had disastrous consequences for aircraft innovation and development suffocating both competition and initiative and leading to the maintenance of inadequate aircraft by the Royal Flying Corps following the outbreak of war The continuing dispute and its culmination in the Fokker Scourge controversy of 1915 1916 graphically characterise the strained development of military industrial relations in this area Dr HUGH DRIVER gained an MA in War Studies from King's College London and a D Phil in modern history at Oriel College Oxford **Military Aircraft, 1919-1945** Justin D. Murphy, Matthew A. McNiece, 2008-12-08 An in depth history of the time when airpower became the great equalizer changing military strategy forever and bringing once safe targets in reach **Military Aircraft 1919 1945 An Illustrated History of Their Impact** covers a crucial era in modern warfare technology Ranging from the development of airpower doctrines in the aftermath of World War I to the aircraft and missions that put those doctrines into action during World War II it provides an expert summing up of the decades when the use of aircraft in battle came of age In chapters covering both the history of air power and specific types of aircraft fighters bombers reconnaissance and auxiliary planes **Military Aircraft 1919 1945** introduces key theorists and designers describes important changes in technology and production and recreates spectacular episodes from Pearl Harbor to the London Blitz to the Enola Gay Readers will see the dramatic impact of the first generation of modern military aircraft on land and sea They will also see how the expansion of war to the skies brought economic opportunity to some home fronts and looming terror and devastation to others

History of French Military Aviation Charles Christienne, Pierre Lissarrague, 1983* Military Aircraft, Origins to 1918 Justin D. Murphy, 2005-04-27 An expert examination of the evolution of military aviation and its profound impact on warfare from the employment of balloons during the French Revolutionary wars to the use of aircraft in World War I **Military Aircraft Origins to 1918 An Illustrated History of Their Impact** is a detailed authoritative exploration of the role and development of military aviation from its beginnings to the conclusion of World War I Military history scholar Justin Murphy

carefully illustrates the impact of aircraft on military warfare examines the different types of aircraft and includes a wealth of photographs and descriptions Organized thematically the work covers everything from the origins of military aviation and the impact of aircraft on World War I to the role of reconnaissance missions auxiliary aircraft fighters and bombers Each chapter highlights key individuals advancements in aviation technology industrial organization and aircraft production and the influence of aircraft on military tactics and strategy Murphy also demonstrates how aircraft contributed to the development of total war and blurred the lines that had traditionally separated combatants and noncombatants *A clash of military cultures German & French...* , **The French Army's Tank Force and Armoured Warfare in the Great War** Tim Gale,2016-03-16 Recent scholarship has challenged the assumption that military commanders during the First World War were inflexible backward looking and unwilling to exploit new technologies Instead a very different picture is now emerging of armies desperately looking to a wide range of often untested and immature scientific and technological innovations to help break the deadlock of the Western Front Nowhere is this better illustrated than in the development of tank warfare which both the British and the French hoped would give them a decisive edge in their offensives of 1917 and 1918 Whilst the British efforts to develop armoured warfare have been well chronicled there has been no academic study in English on the French tank force the Artillerie Sp ciale during the Great War As such this book provides a welcome new perspective on an important but much misunderstood area of the war Such was the scale of the French tanks failure in their first engagement in 1917 it was rumoured that the Artillerie Sp ciale was in danger of being disbanded yet by the end of the war it was the world s largest and most technologically advanced tank force This work examines this important facet of the French army s performance in the First World War arguing that the AS fought the war in as intelligent and sensible a manner as was possible given the immature state of the technology available No amount of sound tank doctrine could compensate for the fragility of the material for the paucity of battlefield communication equipment and for the lack of tank infantry training opportunities Only by 1918 was the French army equipped with enough reliable tanks as well as aircraft and heavy artillery to begin to exercise a mastery of the new form of combined arms warfare The successful French armoured effort outlined in this study including a listing of all the combat engagements of the French tank service in the Great War highlights a level of military effectiveness within *Air Force Magazine* ,1987 *Air Power in the Age of Total War* John Buckley,2006-05-09 Warfare in the first half of the 20th century was fundamentally and irrovocably altered by the birth and subsequent development of air power This work assesses the role of air power in changing the face of battle on land and sea Utilizing late 1990s research the author demonstrates that the phenomenon of air power was both a cause and a crucial accelerating factor contributing to the theory and practice of total war For instance the expansion of warfare to the homefront was a direct result of bombing and indirectly due to the extent of national economic mobilization required to support first rate air power status In addition the move away from the principle of total war with the onset of the Cold War and the replacement of

air power by ICBMs is thoroughly examined This work should provide students of international history war studies defence and strategic studies with an insight into 20th century warfare **Armaments and the Coming of War** David
