Toxins Philip Rosenberg, 2013-10-02 **Toxins Animal Plant and Microbial** is a collection of materials from the proceedings of the Fifth International Symposium on Animal Plant and Microbial toxins held in Costa Rica in August 1976. The book deals with research done on reptiles, arthropods, marine, fresh water, amphibians, plants, bacteria, and multispecies, focusing on topics such as biology, anatomy, immunology, biochemistry, physiology, and pharmacology. The paper starts with the feeding methods and diet for snakes that will be used for venom collection. Another paper describes the venom apparatus and amount of venom yields of the snake *Hydrophiidae*. The book also describes the ultrastructure of the skin of the soapfish *Grammistes sexlineatus* known to release an irritating substance when threatened or disturbed. One paper presents the effect of toxins derived from the scorpion venom on neuromuscular transmission, while another study describes anti-scorpion serum and antivenin with a corresponding table representing the correct serum dosage. The book then presents a method to use for quantitative separation and analysis of certain mycotoxins that can be present in foodstuffs. One paper also addresses the effects of mycotoxins on immunity levels such as lowered resistance to diseases, interference with acquired immunity, and changes in antibody production. Chemists, students, and professors in organic chemistry and laboratory technicians whose work is related to pharmacology and toxicology will find this book relevant. **Catalog of Copyright Entries. Explorations in Developmental Biology Chandler Fulton, Attila O. Klein, 1976 **Explorations in Developmental Biology** is a revolutionary departure from time-honored introductory texts. The book is based on the premise that the substance, concepts, and excitement of contemporary developmental biology are best communicated to students by using the same form in which they were first communicated to the scientific community: original research reports. But a simple collection of original papers is not sufficient; it is too limited in scope and too disjointed, and students are not prepared to read them with understanding. In this book, designed to serve as the principal text for a first or second course in developmental biology, basic concepts are presented in a series of 22 chapters that focus on major, often unsolved problems ranging from self-assembly to embryonic induction to cellular communication by surface contact. Within each chapter, the authors provide the necessary background in developmental biology and also describe the specific experimental procedures that enable the student to understand and appreciate the contributions of significant research papers that are included. The authors' texts and the reprinted papers are integrated into a cohesive whole so that each chapter provides up-to-date information about an important area of developmental biology and raises specific questions. Throughout the text is profusely illustrated with original drawings and with figures taken from the literature, and each chapter contains a brief guide to pertinent publications. **Explorations in Developmental Biology** makes it possible for teachers and students to penetrate the perennial barrier between classroom and research laboratory. Students who use this book are well equipped to move on to more advanced

studies in biology for they will have acquired the ability to use and to evaluate original scientific communications and will have assimilated the subject matter of a science that is at the center of modern biology

Physiology Or Medicine Jan Lindsten,1992 The quality of life for millions of people all over the globe has been improved by the work of diligent biologists and doctors working in the many branches of life science An improved knowledge of how the body functions at the genetic cellular physiological and behavioural levels and a greater understanding of disease and pharmacology have resulted in a reduction in human suffering The way is being paved for the effective treatment of some of the greatest health problems of the late twentieth century cancer AIDS and diseases caused by parasites These two volumes are collections of the Nobel Lectures delivered by the laureates together with their biographies portraits and the presentation speeches for the periods 1971 1980 and 1981 1990 respectively Each Nobel Lecture is based on the work for which the laureate was awarded the prize New biographical data of the laureate are also included These volumes of inspiring lectures by outstanding scientists should be on the bookshelf of every keen student teacher and professor of biological and medical sciences as well as of those in related fields During the period 1971 1980 important areas of research being recognized were as diverse as hormone action and radioimmunoassays infectious diseases molecular genetics immunology computerized tomography and social behaviour The laureates according to the specific year are 1971 E W SUTHERLAND JR for his discoveries concerning the mechanisms of the action of hormones 1972 G M EDELMAN 1973 K VON FRISCH K LORENZ 1974 A CLAUDE C DE DUVE 1975 D BALTIMORE R DULBECCO 1976 B S BLUMBERG 1977 R GUILLEMIN and R S YALOW for the development of radioimmunoassays of peptide hormones 1978 W ARBER D NATHANS 1979 A M CORMACK 1980 B BENACERRAF J DAUSSET G D SNELL for their discoveries concerning genetically determined structures on the cell surface that regulate immunological reactions
