Interpreting Forest and Grassland Biome Productivity Utilizing Nested Scales of Image Resolution and Biogeographical Analysis ,1987 **Revisiting the Biome Concept with a Functional Lens** Daniel M.

Griffith,Christopher J. Still,Colin P. Osborne,2019-08-02 Early biogeographers such as Alexander von Humboldt recognized the broad scale coupling of vegetation and climate This observation shaped the modern biome concept which organizes ecosystems by assumed relationships to environmental controls This approach has been criticized for missing key impacts on the distribution and functioning of biomes like historical contingency biogeographic history disturbance ecology and evolution Are biomes still a convenient framework for organizing our understanding of biodiversity What factors determine the functional differences among and within biomes and at what spatial temporal and phylogenetic scales are those drivers most important How can we better represent the functional characteristics and dynamics of ecosystems This Research Topic highlights the latest discussions and research on biomes drawing from a wide range of approaches spanning from macroecology and phylogeography to remote sensing and modelling ecosystem responses to global change Grasses and

Grassland Ecology David J. This book is for advanced students researchers and professionals from Earth and Environmental Sciences The Argentinean Pampa plain is an extensive region of ca 673 000 km² between 30 S and 38 S in South America The region encompasses a large number of lakes 50 000 of highly variable sizes Pampean lakes have been very sensitive to past and recent climatic change Thus paleolimnological research across the Pampa plain provides unique insights into regional environmental variability since the Late Pleistocene up to the most recent hydroclimatic changes These lakes are sensors of both the documented increase in precipitation that occurred after the 1970 s seventies as well as substantial changes in land use It compiles the most outstanding information of the region for the last 30 years regarding ecological aspects changes in land

use processes and their impact on water bodies paleolimnological reconstructions archeology hydroclimatic variability and associated human dimension This knowledge provides environmental information that is fundamental to develop integrated water management projects **Ecology and Conservation of Mountaintop grasslands in Brazil** Geraldo Wilson

Fernandes,2016-04-20 This book is a pioneer attempt to bring forward the first synthesis on the most diverse and threatened mountain top vegetation of South America the rupestrian grasslands It brings to light the state of the art information on this ecosystem geology soil formation and distribution environmental filters that lead to biodiversity species interactions and their fine tuned adaptations to survive the harsh mountain environment The human dimensions of the rupestrian grassland are also addressed including the anthropogenic threats that may irreversibly impact biodiversity and ecosystem services The book also highlights the ongoing studies on ecological restoration and first attempt to model the impacts of climate change on its speciose biota **Patterns, functions, and processes of alpine grassland ecosystems under global change** Jian
