Handbook of Moisture Determination and Control A Pande, 1974 **Handbook of Moisture Determination and Control** A. Pande, 1975 **Handbook of Moisture Determination and Control** A. Pande, 1975 Handbook of moisture determination and control : principles, techniques, applications. In four volumes. 1 (1974) A. Pande, 1974 **Water Relationships in Foods** Harry Levine, Louise Slade, 1991-09-30 This book was developed from the papers presented at a symposium on Water Relationships in Foods which was held from April 10 14 1989 at the 197th National Meeting of the American Chemical Society in Dallas Texas under the auspices of the Agricultural and Food Chemistry Division of ACS The editors of this book organized the symposium to bring together an esteemed group of internationally respected experts currently active in the field of water relationships in foods to discuss recent advances in the 1980 s and future trends for the 1990 s It was the hope of all these contributors that this ACS symposium would become a memorable keystone above the foundation underlying the field of water in foods This strong foundation has been constructed in large part from earlier technical conferences and books such as the four milestone International Symposia on the Properties of Water ISOPOW I IV the recent IFT Basic Symposium on Water Activity and Penang meeting on Food Preservation by Moisture Control as well as the key fundamental contributions from the classic 1980 ACS Symposium Series 127 on Water in Polymers and from Felix Franks famous seven volume Comprehensive Treatise on Water plus five subsequent volumes of the ongoing Water Science Reviews The objective of the 1989 ACS symposium was to build on this foundation by emphasizing the most recent and major advances *NMR Applications in Biopolymers* John W. Finley, Siegfried J. Schmidt, A.S. Serianni, 2012-12-06 Elucidating the structures of biopolymers as they exist in nature has long been a goal of biochemists and biologists Understanding how these substances interact with themselves other solutes and solvents can provide useful insights into many areas of biochemistry agriculture food science and medicine Knowledge of the structure of a protein or complex carbohydrate in its native form provides guidelines for the chemical or genetic modifications often desired to optimize these compounds to specific needs and applications For example in the pharmaceutical industry structure function relationships involving biopolymers are studied routinely as a means to design new drugs and improve their efficacies The tools to conduct structure investigations of biopolymers at the molecular level are limited in number Historically X ray crystallography has been the most attractive method to conduct studies of this type However X ray methods can only be applied to highly ordered crystalline materials thus obviating studies of solution dynamics that are often critical to attaining a global understanding of biopolymer behavior In recent years nuclear magnetic resonance NMR spectroscopy has evolved to become a powerful tool to probe the structures of biopolymers in solution and in the solid state NMR provides a means to study the dynamics of polymers in solution and to examine the effects of solute solvent and other factors on polymer behavior With the development of 2D and 3D forms of NMR spectroscopy it is now possible to assess the solution conformations of small proteins oligonucleotides and
