Handbook of Phosphorus-31 Nuclear Magnetic Resonance Data John C. Tebb, 1990-12-26 To fully utilize Nuclear Magnetic Resonance NMR spectroscopy a comprehensive and well organized compilation of NMR data is necessary While compilations have been available for other important NMR nuclei such as carbon and fluorine no comprehensive collection of data has been prepared for phosphorus until now The CRC Handbook of Phosphorus 31 Nuclear Magnetic Resonance Data provides a collection of  $^{31}\text{P}$  NMR chemical shifts for nearly 20 000 organic and inorganic phosphorus compounds Each class of phosphorus compound is discussed Bond types stereochemistry with the exception of metal complexes media important coupling constants and data sources are included The information is systematically organized according to coordination state the atoms bound to phosphorus and their connectivities A comprehensive series of bar charts is also included to allow structure types to be assigned to chemical shift data This handbook is an invaluable resource for all scientists working with phosphorus compounds including chemists biochemists medical researchers and pharmaceutical chemists

**Phosphorus-31 NMR Spectroscopy** Olaf Kühl, 2008-08-22 Nuclear Magnetic Resonance is a powerful tool especially for the identification of 1  $^{13}\text{C}$  hitherto unknown organic compounds H and C NMR spectroscopy is known and applied by virtually every synthetically working Organic Chemist Consequently the factors governing the differences in chemical shift values based on chemical environment bonding temperature solvent pH etc are well understood and specialty methods developed for almost every conceivable structural challenge Proton and carbon NMR spectroscopy is part of most bachelors degree courses with advanced methods integrated into masters degree and other graduate courses In view of this universal knowledge about proton and carbon NMR spectroscopy within the chemical community it is remarkable that heteronuclear NMR is still looked upon as something of a curiosity Admittedly most organic compounds contain only nitrogen oxygen and sulfur atoms as well as the obligatory hydrogen and carbon atoms elements that have an unfavourable

isotope distribution when it comes to NMR spectroscopy Each of these three elements has a dominant isotope  $^{14}\text{N}$  99.63% natural abundance  $^{16}\text{O}$  99.76% and  $^{32}\text{S}$  95.02% with  $^{15}\text{N}$  and  $^{34}\text{S}$  4.21% NMR silent  $^{14}\text{N}$  has a nuclear moment  $I = 1$  and a sizeable quadrupolar moment that makes the NMR signals usually very broad and difficult to analyse **CRC**

**Handbook of Basic Tables for Chemical Analysis** Thomas J. Bruno, Paris D.N. Svoronos, 2010-12-13 Winner of an Outstanding Academic Title Award for 2011 Researchers in organic chemistry chemical engineering pharmaceutical science forensics and environmental science make routine use of chemical analysis but the information these researchers need is often scattered in different sources and difficult to access The CRC Handbook of Basic Tables **Organophosphorus**

**Synthesis and Original Reactivity of Copper and Gold Complexes** Maximilian Joost, 2015-06-13 This thesis addresses the coordination chemistry and reactivity of copper and gold complexes with a focus on the elucidation of i the metal mediated activation of bonds and ii the migratory insertion reaction Both processes are of considerable importance in organometallic chemistry but remain elusive for Cu and Au complexes In this work the author contributes significant advances The first SiH complexes of copper are experimentally and computationally characterized yielding valuable insights into bond activation processes for copper Evidence for a highly unusual migratory syn insertion of unsaturated organic molecules into the gold silicon bond of silylgold I complexes is provided and the corresponding mechanism identified The intermolecular oxidative addition of SiSi CC and CX X halogen bonds with molecular gold I complexes is studied in detail effectively demonstrating that this reaction usually considered to be impossible for gold is actually highly favored provided an adequate ligand is employed The use of small bite angle bis phosphine gold I complexes allows for the first time the oxidative addition of CC and CX bonds for gold I These results shed light on an unexpected reactivity pattern of gold complexes and may point the way to 2 electron redox transformations mediated by this metal opening up new perspectives in gold catalysis
