Yaws,1994 *Droplets and Sprays: Simple Models of Complex Processes* Sergei S. Sazhin,2022-06-28 This book acts as a
guide to simple models that describe some of the complex fluid dynamics heat mass transfer and combustion processes in
droplets and sprays Attention is focused mainly on the use of classical hydrodynamics and a combination of kinetic and
hydrodynamic models to analyse the heating and evaporation of mono and multi component droplets The models were
developed for cases when small and large numbers of components are present in droplets Some of these models are used for
the prediction of time to puffing micro explosion of composite water fuel droplets processes that are widely used in
combustion devices to stimulate disintegration of relatively large droplets into smaller ones The predictions of numerical
codes based on these models are validated against experimental results where possible In most of the models droplets are
assumed to be spherical some preliminary results of the generalisation of these models to the case of non spherical droplets
approximating them as spheroids are presented **Finishing of Advanced Ceramics and Glasses** Robert Sabia,Victor A.
