Electronics has become the largest industry surpassing agriculture auto and heavy metal industries It has become the industry of choice for a country to prosper already having given rise to the phenomenal prosperity of Japan Korea Singapore Hong Kong and Ireland among others At the current growth rate total worldwide semiconductor sales will reach 300B by the year 2000 The key electronic technologies responsible for the growth of the industry include semiconductors the packaging

of semiconductors for systems use in auto telecom computer consumer aerospace and medical industries displays magnetic and optical storage as well as software and system technologies There has been a paradigm shift however in these technologies from mainframe and supercomputer applications at any cost to consumer applications at approximately one tenth the cost and size Personal computers are a good example going from 500IMIP when products were first introduced in 1981 to a projected 1IMIP within 10 years Thin light portable user friendly and very low cost are therefore the attributes of tomorrow s computing and communications systems Electronic packaging is defined as interconnection powering cooling and protecting semiconductor chips for reliable systems It is a key enabling technology achieving the requirements for reducing the size and cost at the system and product level

Microelectronic Interconnections and Assembly G.G. Harman,Pavel Mach,2012-12-06 MICROELECTRONIC INTERCONNECTIONS AND MICROASSEMBLY WORKSHOP 18 21 May 1996 Prague Czech Republic Conference Organizers George Harman NIST USA and Pavel Mach Czech Republic Summary of the Technical Program Thirty two presentations were given in eight technical sessions at the Workshop A list of these sessions and their chairpersons is attached below The Workshop was devoted to the technical aspects of advanced interconnections and microassembly but also included papers on the education issues required to prepare students to work in these areas In addition to new technical developments several papers presented overviews predicting the future directions of these technologies The basic issue is that electronic systems will continue to be miniaturized and at the same time performance must continue to improve Various industry roadmaps were discussed as well as new smaller packaging and interconnection concepts The newest chip packages are often based on the selection of an appropriate interconnection method An example is the chip scale package which has horizontal x y dimensions 20% larger

than the actual silicon chip itself The chip is often flip chip connected to a micro ball grid array but direct chip attach was described also Several papers described advances in the manufacture of such packages **Chip On Board** John H. Lau,1994-06-30 This book is a one stop guide to the state of the art of COB technology For professionals active in COB and MCM research and development those who wish to master COB and MCM problem solving methods and those who must choose a cost effective design and high yield manufacturing process for their interconnect systems here is a timely summary of progress in al aspects of this fascinating field It meets the reference needs of design material process equipment manufacturing quality reliability packaging and system engineers and technical managers working in electronic packaging and interconnection Microelectronics Packaging Handbook R. R. Tummala,Eugene J Rymaszewski,Alan G Klopfenstein,1997-01-31 **Ceramic Interconnect Technology Handbook** Fred D. Barlow, III,Aicha Elshabini,2018-10-03 Ceramics were among the first materials used as substrates for mass produced electronics and they remain an important class of packaging and interconnect material today Most available information about ceramic electronics is either outdated or focused on their materials science characteristics The Ceramic Interconnect Technology Handbook goes beyond the traditional approach by first surveying the unique properties of ceramics and then discussing design processing fabrication and integration as well as packaging and interconnect technologies Collecting contributions from an outstanding panel of experts this book offers an up to date overview of modern ceramic electronics from design and material selection to manufacturing and implementation Beginning with an overview of the development properties advantages and applications of ceramics coverage spans electrical design testing simulation thermomechanical design screen printing multilayer ceramics photo defined and photo imaged films copper interconnects for ceramic substrates and integrated passive devices in ceramic substrates It also offers a detailed review of the surface thermal mechanical and electrical properties of various ceramics as well as the processing of high and low temperature cofired ceramic HTCC and LTCC substrates Opening new vistas and avenues of advancement the Ceramic Interconnect Technology Handbook is the only source for comprehensive discussion and analysis of nearly every facet of ceramic interconnect technology and applications Robust Electronic Design Reference Book: no special title John R.
