Granular Activated Carbon Design Operation And Cost:

Granular Activated Carbon Clark, 1989-10-01 This new book presents design cost and performance information on the application of GAC in drinking water including the use of GAC both in the U S and overseas Various design concepts for the unit operations that make up the GAC process are presented in 11 comprehensive complete chapters including a special chapter that provides cost equations and comparative cost studies for full scale application of GAC Water Treatment Unit Processes David W. Hendricks, 2018-10-03 The unit process approach common in the field of chemical engineering was introduced about 1962 to the field of environmental engineering An understanding of unit processes is the foundation for continued learning and for designing treatment systems The time is ripe for a new textbook that delineates the role of unit process principles in environmental engineering Suitable for a two semester course Water Treatment Unit Processes Physical and Chemical provides the grounding in the underlying principles of each unit process that students need in order to link theory to practice Bridging the gap between scientific principles and engineering practice the book covers approaches that are common to all unit processes as well as principles that characterize each unit process Integrating theory into algorithms for practice Professor Hendricks emphasizes the fundamentals using simple explanations and avoiding models that are too complex mathematically allowing students to assimilate principles without getting sidelined by excess calculations Applications of unit processes principles are illustrated by example problems in each chapter Student problems are provided at the end of each chapter the solutions manual can be downloaded from the CRC Press Web site Excel spreadsheets are integrated into the text as tables designated by a CD prefix Certain spreadsheets illustrate the idea of scenarios that emphasize the idea that design solutions depend upon assumptions and the interactions between design variables The spreadsheets can be downloaded from the CRC web site The book has been designed so that each unit process topic is self contained with sidebars and examples throughout the text Each chapter has subheadings so that students can scan the pages and identify important topics with little effort Problems references and a glossary are found at the end of each chapter Most chapters contain downloadable Excel spreadsheets integrated into the text and appendices with additional information Appendices at the end of the book provide useful reference material on various topics that support the text This design allows students at different levels to easily navigate through the book and professors to assign pertinent sections in the order they prefer The book gives your students an understanding of the broader aspects of one of the core areas of the environmental engineering curriculum and knowledge important for the design of treatment systems **Pure and Functionalized Carbon Based Nanomaterials** Pawel K. Zarzycki, 2020-07-02 This book describes in a comprehensive manner latest studies conducted by various research groups worldwide focusing on carbon and related nanomaterials Fourteen chapters of this book deal with a number of key research topics and applications of pure and functionalized carbon nanomaterials and their hybrid nanocomposites Specifically the authors have presented interdisciplinary investigations including i carbon

nanoparticles and layers synthesis ii analytical aspects of carbon nanomaterials and their characterisation under different conditions as well as iii various applications of carbon nanoparticles They have reported and summarised key applications of carbon particles or nanoobjects in pharmacy biomedicine agriculture and food industry water treatment physicochemical analysis optoelectronics electronic and magnetic materials for supercapacitors or radar adsorbing materials tribology chromatography electrophoresis bioanalysis nanobiocatalysis biofuels production as well as environmental remediation

Atimtay, Subhas K. Sikdar, 2011-08-30 Over time the increased use of fresh water for agriculture and industry together with contamination from discharges of pollutants mean that ever more areas of the planet are becoming water stressed Because of the competing needs of communities and industry for fresh water industry will be challenged to meet its growing demands for water which is essential for producing the goods and services that would boost human welfare Thus

industry will need to learn how to cost effectively purify and recycle its wastewater for reuse ultimately approaching a net zero discharge condition The chapters in this book written by international experts treat the technical issues of such treatment and water management and also provide guidance on technologies either existing or in development that can potentially achieve the goal of recycle reuse The book will serve as a useful reference for academics government and industry professionals alike Estimating Costs for Water Treatment as a Function of Size and Treatment Efficiency Robert C.
