Insect Conservation and Australia's Grasslands Tim R. New, 2019-11-13 Australia's varied grasslands have suffered massive losses and changes since European settlement and those changes continue under increasingly intensive human pressures for development and agricultural production The values of native grasslands for conservation of endemic native biodiversity both flora and fauna have led to strong interests in the protection of remaining fragments especially near urban centres and documentation of the insects and other inhabitants of grasslands spanning tropical to cool temperate parts of the country Attention to conservation of grassland insects in Australia is relatively recent but it is increasingly apparent that grasslands harbour many localised and ecologically specialised endemic species Their conservation necessarily advances from very incomplete documentation and draws heavily on lessons from the far better documented grasslands elsewhere most notably in the northern hemisphere and undertaken over far longer periods From those cases and the extensive background to grassland management to harmonise conservation with production and amenity values through honing use of processes such as grazing mowing and fire the needs and priorities for Australia can become clearer together with needs for grassland restoration at a variety of scales This book is a broad overview of conservation needs of grassland insects in Australia drawing on the background provided elsewhere in the world on the responses to disturbances and the ecological importance of some key insect groups notably Orthoptera Hemiptera and Lepidoptera to suggest how insect conservation in native pastoral and urban grasslands may be advanced The substantial references given for each chapter facilitate entry for non entomologist grassland managers and stewards to appreciate the diversity and importance of Australia s grassland

insects their vulnerabilities to changes and the possibilities for conserving them and the wider ecological roles in which they North American Cornucopia Ernest Small, 2013-09-23 Many North American plants have characteristics that participate are especially promising for creating varieties needed to expand food production and there are excellent prospects of generating new economically competitive crops from these natives The inadequacy of current crops to meet the food demands of the world's huge growing population makes the potential of indigenous North American food plants even more significant These plants can also generate crops that are more compatible with the ecology of the world and many also have inherent health benefits Presenting detailed scholarship a thoroughly accessible style and numerous entertaining anecdotes North American Cornucopia Top 100 Indigenous Food Plants is a full color book dedicated to the most important 100 native food plants of North America north of Mexico that have achieved commercial success or have substantial market potential The introductory chapter reviews the historical development of North American indigenous crops and factors bearing on their future economic success The rest of the book consists of 100 chapters each dedicated to a particular crop The book employs a user friendly chapter format that presents the material in sections offering in depth coverage of each plant The first section of each chapter provides information on the scientific and English names of the plants followed by a section on the geography and ecology of the wild forms accompanied by a map showing the North American distribution A section entitled Plant Portrait comprises a basic description of the plant its history and its economic and social importance This is followed by Culinary Portrait concerned with food uses and culinary vocabulary The chapters then provide an analysis of the economic future of each crop discuss notable and interesting scientific or technological observations and accomplishments and present extensive references Identification Guide to the Non-Native Invasive Plants of Britain and Ireland Fran Giaquinto, Phoebe O'Brien, 2025-04-29 This accessible guide gives you the tools to be confident in identifying and managing frequently encountered non native invasive plants in Britain and Ireland Invasive alien species IAS are one of the biggest drivers of global biodiversity loss along with climate change and habitat fragmentation If allowed to colonise unchecked they can have irreversible negative impacts on the integrity of the natural environment and associated ecosystem services In spite of widescale efforts there has been an almost exponential increase in new introductions to Britain and Ireland in the last 20 years The only way we can tackle them is to engage both professionals and the public in mapping their distribution and to encourage everyone to take the right actions to contain them This book will help you Identify frequently encountered non native invasive plants and know their potential impacts Differentiate lookalikes including how to separate native species from closely related non native invasive species Understand the extent of invasive potential including trees grasses freshwater aquatics and seaweeds Quickly check the legislation so you know which species should be reported and to whom Prevent mistakes often with best intentions people take action which makes the situation worse Avoid introducing invasive species into your gardens and local environment Packed with illustrations maps and tips this book is a practical tool and reference
