The Arrows of Time Laura Mersini-Houghton, Rudy Vaas, 2012-05-30 The concept of time has fascinated humanity throughout recorded history and it remains one of the biggest mysteries in science and philosophy Time is clearly one of the fundamental building blocks of the universe and thus a deeper understanding of nature at a fundamental level also demands a comprehension of time Furthermore the origins of the universe are closely intertwined with the puzzle of time Did time emerge at the Big Bang Why does the arrow of time conspire with the order of the initial state of the universe This book addresses many of the most important questions about time What is time and is it fundamental or emergent Why is there such an arrow of time closely related to the initial state of the universe and why do the cosmic thermodynamic and other arrows agree These issues are discussed here by leading experts and each offers a new perspective on the debate Their contributions delve into the most difficult research topic in physics also describing the latest cutting edge research on the subject The book also offers readers a comparison between the different outlooks of philosophy physics and cosmology on the puzzle of time This volume is intended to be useful for research purposes but most chapters are also accessible to a more general audience of scientifically educated readers looking for deeper insights

String Gravity and Physics at the Planck Energy Scale

Norma G. Sánchez, Antonino Zichichi, 2012-12-06 The contemporary trends in the quantum unification of all interactions including gravity motivate this Course The main goal and impact of modern string theory is to provide a consistent quantum theory of gravity This Course is intended to provide an updated understanding of the last developments and current problems of string theory in connection with gravity and the physics at the Planck energy scale It is also the aim of this Course to discuss fundamental problems of quantum gravity in the present day context irrespective of strings or any other models Emphasis is given to the mutual impact of string theory gravity and cosmology within a deep a well defined programme which provides in addition a careful interdisciplinarity Since the most relevant new physics provided by strings concerns the quantization of gravity we must at least understand string quantization in curved space times to start Curved space times besides their evident relevance in classical gravitation are also important at energies of the order of the Planck scale At the Planck energy gravitational interactions are at least as important as the rest and can not be neglected anymore Special care is taken here to provide the grounds of the different lines of research in competition not just only one approach this provides an excellent opportunity to learn about the real state of the discipline and to learn it in a critical way **Mathematical Reviews**, 2006 Progress of Theoretical Physics, 2006 **Dictionary of Geophysics, Astrophysics, and Astronomy** Richard A.
