whether they continue on in the field or transition to medicine industry Presents concepts through extensive four color visuals appealing to a range of learning styles Promotes critical thinking through open ended questions throughout the narrative and at the end of each chapter

**Bioinorganic Chemistry** D.P. Kessissoglou, 2012-12-06 Bioinorganic chemistry is primarily concerned with the role of metal atoms in biology and is a very active research field However even though such important structures of metalloenzymes are known as the MoFeCo of nitrogenase Cu or Mn superoxide dismutase and plastocyanin the synthetic routes to the modelling of such centers remains a matter of acute scientific interest Other metalloenzymes such as the Mn center of the oxygen evolving complex of PSII are still the focus of in depth examination both spectroscopic and structural Another area of concern is the interaction between drugs and metals and metal ion antagonism Understanding the chemistry of metal ions in biological systems will bring benefits in terms of understanding such problems as biomineralization and the production of advanced materials by micro organisms The 29 contributions to Bioinorganic Chemistry An Inorganic Perspective of Life give an excellent summary of the state of the art in this field covering areas from the NMR of paramagnetic molecules to the use of lanthanide porphyrins in artificial batteries

**Biomineralization** Erich Königsberger, LanChi Königsberger, 2006-07-11 This title takes an interdisciplinary approach to the central role of solubility in pathological biomineralisation ranging from traditional thermodynamics and kinetics to unusual concepts such as the PILP process The scientific background and expertise of the contributors ranges accordingly from solubility modelling and database development renal stone and bone implant research Mossbauer spectroscopy and structural chemistry to biochemistry and crystallisation The chapters all have a quantitative physico chemical component rather than giving purely phenomenological descriptions The contributors deal with aspects and concepts that have not previously been common in the study of pathological biomineralisation processes

Handbook of Polymer Synthesis Hans R. Kricheldorf, Oskar Nuyken, Graham Swift, 2004-11-27 An in depth review of important preparative methods for the synthesis and chemical modification of polymers this authoritative second edition examines the advantages and limitations of various polymerization applications and procedures It features new approaches and innovative strategies from the most prominent industry and academic laboratories

*Metal Complex - DNA Interactions* Nick Hadjiladis, Einar Sletten, 2009-03-30 Metal ions and metal complexes have long been recognized as critically important components of nucleic acid chemistry both in regulation of gene expression and as promising therapeutic agents Understanding how metal complexes interact with DNA has become an active research area at the interface between chemistry molecular biology and medicine Metal Complex DNA Interactions provides a comprehensive overview of this increasingly diverse field presenting recent developments and the latest research with particular emphasis on metal based drugs and metal ion toxicity The text is divided into four parts Basic Structural and Kinetic Aspects includes chapters on sequence selective metal binding to DNA and thermodynamic models Medical Applications focuses on anticancer platinum drugs including discussions on DNA repair in antitumor effects of platinum drugs and photo

dynamic therapy DNA Recognition Nucleases and Sensor describes probes for DNA recognition artificial restriction agents metallo DNazymes for metal sensing applications and metal ion independent catalysis in nucleic acid enzymes Toxicological Aspects deals with structural studies of mercury DNA interactions chromium induced DNA damage and repair and the effect of arsenic and nickel on DNA integrity This book will be a valuable resource for academic researchers and professionals from a range of pharmaceutical and chemical industries particularly those involved in the development of new and less toxic anticancer metallo drugs and in the field of environmental and toxicological chemistry

**Copper and Zinc in Inflammatory and Degenerative Diseases** K. D. Rainsford, Roberto Milanino, J.R.J. Sorenson, G.P. Velo, 2012-12-06

Abnormal metabolism and distribution of both copper and zinc occurs in many inflammatory and degenerative diseases The pattern of these changes varies at different stages of these diseases and with differing types of conditions The corollary to this situation is the possibility of using drugs or metal complexes to modify both the perturbed status of copper and zinc and thus the disease states This book comprehensively reviews the clinical and experimental data on the changes in copper and zinc status in different diseases and the use of various complexes of these metals or drugs to treat a diversity of inflammatory and degenerative conditions
