Astrophysical Concepts Martin Harwit, 2013-03-14 My principal aim in writing this book was to present a wide range of astrophysical topics in sufficient depth to give the reader a general quantitative understanding of the subject The book outlines cosmic events but does not portray them in detail it provides a series of astrophysical sketches I think this approach befits the present uncertainties and changing views in astrophysics The material is based on notes I prepared for a course aimed at seniors and beginning graduate students in physics and astronomy at Cornell This course defined the level at which the book is written For readers who are versed in physics but are unfamiliar with astronomical terminology Appendix A is included It gives a brief background of astronomical concepts and should be read before starting the main text The first few

chapters outline the scope of modern astrophysics and deal with elementary problems concerning the size and mass of cosmic objects. However, it soon becomes apparent that a broad foundation in physics is needed to proceed. This base is developed in Chapters 4 to 7 by using as examples specific astronomical situations. Chapters 8 to 10 enlarge on the topics first outlined in Chapter I and show how we can obtain quantitative insights into the structure and evolution of stars, the dynamics of cosmic gases, and the large-scale behavior of the universe.

Digital Expressions of the Self(ie) Avishek Ray, Ethiraj Gabriel Dattatreya, Usha Raman, Martin Web, Neha Gupta, Sai Amulya Komaraju, Anuja Premika, Riad Azam, Farhat Salim, Pranavesh Subramanian, 2024-02-06. The book examines the social and cultural role of selfies in India. It looks at how the selfie, unlike the photograph which was a gesture towards an external reality, remains intimately self-referential yet reconfigures social ordering, identity formation, agency, and spaces in curious ways. This volume approaches questions about the construction and performance of the self through the digital selfie and uses this situated, contextualized, and culturally specific phenomenon as a site to explore the themes of self-making, place-making, gender subjectivity, and power. Highlighting the specific contexts of production, the authors examine the array of self-expressive capabilities realized in a multitude of uses of the selfie that simultaneously reconfigure the self, the space, and the world. An important study of visual social media culture, the volume will be useful for interpreting everyday media experiences and will be of interest to students and researchers of image studies, visual studies, photography studies, visual culture, media studies, culture studies, cultural anthropology, digital humanities, popular culture, sociology of technology, and South Asian studies.

Blackstar Theory Leah Kardos, 2021-12-16. Blackstar Theory takes a close look at David Bowie's ambitious last works: his surprise comeback project *The Next Day* (2013), the off-Broadway musical *Lazarus* (2015), and the album that preceded the artist's death in 2016 by two days. The book explores the swirl of themes that orbit and entangle these projects from a starting point in musical analysis and features new interviews with key collaborators from the period: producer Tony Visconti, graphic designer Jonathan Barnbrook, musical director Henry Hey, saxophonist Donny McCaslin, and assistant sound engineer Erin Tonkon. These works tackle the biggest of ideas: identity, creativity, chaos, transience, and immortality. They enact a process of individuation for the Bowie meta-persona and invite us to consider what happens when a star dies. In our universe, dying stars do not disappear; they transform into new stellar objects, remnants, and gravitational forces. The radical potential of the Blackstar is demonstrated in the rock star supernova that creates a singularity, resulting in cultural iconicity. It is how a man approaching his own death can create art.

that illuminates the immortal potential of all matter in the known universe **Problems of Cosmogony** ,1960 **High Energy Astrophysics** Malcolm S.
