Global Events And Event Stratigraphy In The Phanerozoic:

Global Events and Event Stratigraphy in the Phanerozoic Otto H. Walliser, 2012-12-06 The existence of rapid and even catastrophic turnovers within the Phanerozoic ecosystems has been discussed controversially for more than 170 years Since 1980 this discussion has become even more intensive after the hypothesis of Alvarez explaining the end Cretaceous mass extinction as the result of a huge asteroid impact on the Earth This theory stimulated several thousand papers and is still controversial The international research programme on Global Biological Events in Earth History attempts to bring the discussion back to the facts by using multidisciplinary investigations of the major Phanerozoic events The results of an international group of experts are presented giving a wealth of information and a thorough discussion of the causes of the various global events

Devonian Events and Correlations R. T. Becker, W. T. Kirchgasser, 2007 The Devonian was a peculiar period characterized by simplified plate tectonic configurations climatic overheating and widely flooded continents The bloom of fishes and ammonoids extensive reef complexes and the conquest of land indicate major biosphere innovations punctuated by many global events including two of the biggest mass extinctions The Devonian was the first system for which subdivisions were formally defined This was achieved by significant advances in pelagic biostratigraphy The chronostratigraphic framework and interdisciplinary techniques allow us to correlate intervals or sudden events across facies boundaries in order to reconstruct the sedimentary and evolutionary history of the system with highest precision This volume honors the lifetime stratigraphic achievements of Michael Robert House 1930-2002 Based on case studies from Europe North Africa and North America it shows how the combination of biostratigraphy chemostratigraphy magnetostratigraphy sequence stratigraphy and event stratigraphy can contribute to a much deeper understanding of both regional and global environmental change

The Great Ordovician Biodiversification Event Barry D. Webby, Florentin Paris, Mary L. Droser, Ian G. Percival, 2004-04-14 Two of the greatest evolutionary events in the history of life on Earth occurred during Early Paleozoic time The first was the Cambrian explosion of skeletonized marine animals about 540 million years ago The second was the Great Ordovician Biodiversification Event which is the focus of this book During the 46 million year Ordovician Period 489-443 m.y. a bewildering array of adaptive radiations of Paleozoic and Modern type biotas appeared in marine habitats the first animals arthropods walked on land and the first non vascular bryophyte like plants based on their cryptospore record colonized terrestrial areas with damp environments This book represents a compilation by a large team of Ordovician specialists from around the world who have enthusiastically cooperated to produce this first globally orientated internationally sponsored IGCP International Geological Correlation Program project on Ordovician biotas The major part is an assembly of genus and species level diversity data for the many Ordovician fossil groups The book also presents an evaluation of how each group diversified through Ordovician time with assessments of patterns of change and rates of origination and extinction As such it will become the standard work

and data source for biotic studies on the Ordovician Period **Cataclysms** Michael R. Rampino, 2017-08-22 In 1980 the science world was stunned when a maverick team of researchers proposed that a massive meteor strike had wiped the dinosaurs and other fauna from the Earth 66 million years ago Scientists found evidence for this theory in a crater of doom on the Yucatán Peninsula showing that our planet had once been a target in a galactic shooting gallery In **Cataclysms** Michael R Rampino builds on the latest findings from leading geoscientists to take neocatastrophism a step further toward a richer understanding of the science behind major planetary upheavals and extinction events Rampino recounts his conversion to the impact hypothesis describing his visits to meteor strike sites and his review of the existing geological record The new geology he outlines explicitly rejects nineteenth century uniformitarianism which casts planetary change as gradual and driven by processes we can see at work today Rampino offers a cosmic context for Earth's geologic evolution in which cataclysms from above in the form of comet and asteroid impacts and from below in the form of huge outpourings of lava in flood basalt eruptions have led to severe and even catastrophic changes to the Earth's surface This new geology sees Earth's position in our solar system and galaxy as the keys to understanding our planet's geology and history of life Rampino concludes with a controversial consideration of dark matter's potential as a triggering mechanism exploring its role in heating Earth's core and spurring massive volcanism throughout geologic time Cretaceous Project 200, Volume 1: The Cretaceous World M.B.

Hart, S.J. Batenburg, B.T. Huber, G.D. Price, N. Thibault, M. Wagnreich, I. Walaszczyk, 2025-04-02 The Cretaceous was first mentioned in the legend of a geological map largely centred on France published in 1822 by Jean Baptiste Julien d'Omalius de Halloy Two hundred years of research have demonstrated that the Cretaceous records some of the highest sea levels atmospheric temperatures and extreme events in Earth history It was also a time of significant palaeogeographical changes and continental fragmentation This volume draws together a collection of papers that demonstrate these particularly Cretaceous events of warm climates sea level change and the impact of major volcanic events on the fauna and flora of the time Geochemical and stable isotope data are used to interpret these changing environments and their impact on the Cretaceous ecosystem The volume closes with a description of the recent drilling of the Chicxulub bolide impact site

Understanding Late Devonian and Permian-Triassic Biotic and Climatic Events Jeff Over, Jared Morrow, P. Wignall, 2005-12-02 The Late Devonian and Permian-Triassic intervals are among the most dynamic episodes of Earth history marked by large secular changes in continental ecosystems dramatic fluctuations in ocean oxygenation major phases of biotic turnover volcanism bolide impact events and rapid fluctuations in stable isotope systems and sea level This volume highlights contributions from a broad range of geological sub-disciplines currently striving to understand these critical intervals of geologically rapid global scale changes Provides updated current models for the mid-Late Devonian and Permian-Triassic mass extinction episodes Highlights several new analytical approaches for developing quantitative datasets Takes an integrated approach presenting datasets from a broad range of sub-disciplines **Applied Stratigraphy** Eduardo A.M.

Koutsoukos,2007-08-16 Stratigraphy has come to be indispensable to nearly all branches of the earth sciences assisting such endeavors as charting the course of evolution understanding ancient ecosystems and furnishing data pivotal to finding strategic mineral resources This book focuses on traditional and innovative stratigraphy techniques and how these can be used to reconstruct the geological history of sedimentary basins and in solving manifold geological problems and phenomena

Ammonoid Paleobiology: From macroevolution to paleogeography Christian Klug,Dieter Korn,Kenneth De Baets,Isabelle Kruta,Royal H. Mapes,2015-07-22 This two volume work is a testament to the abiding interest and human fascination with ammonites We offer a new model to explain the morphogenesis of septa and the shell we explore their habitats by the content of stable isotopes in their shells we discuss the origin and later evolution of this important clade and we deliver hypotheses on its demise The Ammonoidea produced a great number of species that can be used in biostratigraphy and possibly this is the macrofossil group which has been used the most for that purpose Nevertheless many aspects of their anatomy mode of life development or paleobiogeographic distribution are still poorly known Themes treated are biostratigraphy paleoecology paleoenvironment paleobiogeography evolution phylogeny and ontogeny Advances such as an explosion of new information about ammonites new technologies such as isotopic analysis tomography and virtual

paleontology in general as well as continuous discovery of new fossil finds have given us the opportunity to present a comprehensive and timely state of the art compilation Moreover it also points the way for future studies to further enhance our understanding of this endlessly fascinating group of organisms

Evolutionary Patterns Alan H. Cheetham,2001-08 With all the recent advances in molecular and evolutionary biology one could almost wonder why we need the fossil record Molecular sequence data can resolve taxonomic relationships experiments with fruit flies demonstrate evolution and development in real time and field studies of Galapagos finches have provided the strongest evidence for natural selection ever measured in the wild What then can fossils teach us that living organisms cannot Evolutionary Patterns demonstrates the rich variety of clues to evolution that can be gleaned from the fossil record Chief among these are the major trends and anomalies in species development revealed only by deep time such as periodic mass extinctions and species that remain unchanged in form for millions of years Contributors explore modes of development the tempo of speciation and extinction and macroevolutionary patterns and trends The result is an important contribution to paleobiology and evolutionary biology and a spirited defense of the fossil record as a crucial tool for understanding evolution and development The contributors are Ann F Budd Efstathia Bura Leo W Buss Mike Foote J rn Geister Stephen Jay Gould Eckart H kansson Jean Georges Harmelin Lee Ann C Hayek Jeremy B C Jackson Kenneth G Johnson Nancy Knowlton Scott Lidgard Frank K McKinney Daniel W McShea Ross H Nehm Beth Okamura John M Pandolfi Paul D Taylor and Erik Thomsen

Warr,2019-02-26 This richly illustrated book presents Germany s geological evolution in the context of the Earth s dynamic

history It starts with an introduction to Geology and explains the plate tectonic development as well as the formation of both ancient and recent mountain belts namely the Caledonian Variscan and the modern day Alps that formed this part of Europe A dedicated chapter discusses the origin of earthquakes in Germany the occurrence of young volcanic rocks and the various episodes of rock deformation and metamorphism at these complex crossroads of plate tectonic history The book highlights Germany s diverse geological history ranging from the origin of the Earth the formation of deep crystalline rocks and their overlying sedimentary sequences to its more recent ice age quaternary cover The last chapter addresses the shaping of the modern landscape Though the content is also accessible for non geologists it is primarily intended for geoscience students and an academic audience

Palaeogeography and Palaeobiogeography: Biodiversity in Space and Time Paul Upchurch, Alistair J. McGowan, Claire S.C. Slater, 2011-10-24 Biogeography represents one of the most complex and challenging aspects of macroevolutionary research requiring input from both the earth and life sciences Palaeogeographic reconstruction is frequently carried out by researchers with backgrounds in geology and palaeontology who are less likely to be familiar with the latest biogeographic techniques conversely biogeographic methods are often devised by neontologists who may be less familiar with the fossil record stratigraphy and palaeogeography Palaeogeography and Palaeobiogeography Biodiversity in Space and Time bridges the gap between these two communities of researchers who work on the same issues but typically use different types of data The book covers a range of topics and reflects some of the major overall questions in the field such as Which approaches are best

suited to reconstructing biogeographic histories under a range of circumstances How do we maximize the use of organismal and earth sciences data to improve our understanding of events in earth history How well do analytical techniques devised for researching the biogeography of extant organisms perform in the fossil record Can alternative biodiversity metrics particularly those based on morphological measurements enhance our understanding of biogeographic patterns and processes This book approaches palaeobiogeography with coverage of technological applications and detailed case studies It spans a wide selection of overlapping and integrative disciplines including evolutionary theory vicariance biogeography extinctions and the philosophical aspects of palaeogeography It also highlights new technological innovations and applications for research Presenting a unique discussion of both palaeogeography and palaeobiogeography in one volume this book focuses both historically and philosophically on the interface between geology climate and organismal distribution

The Cretaceous-Tertiary Event and Other Catastrophes in Earth History Graham Ryder, David E. Fastovsky, Stefan Gartner, 1996-01-01 This volume attempts to explore and clarify the relationship among the geological records the extinctions and the causes of catastrophes for life in Earth's history Most of the papers address the geological record and the extinctions across the Cretaceous-Tertiary boundary and the buried Chicxulub structure that is now consensually deemed to be of impact origin and to be intimately related to that boundary GSA website
