Fighting for the Farm Jane Adams, 2013-03-26 In North America industrial agriculture has now virtually displaced diversified family farming. The prevailing system depends heavily on labor supplied by migrants and immigrants and its reliance on monoculture raises environmental concerns. In this book Jane Adams and contributors anthropologists and political scientists among them analyze the political dynamics that have transformed agriculture in the United States and Canada since the 1920s. The contributors demonstrate that people become politically active in arenas that range from the state to public discourse to relations between growers and their contractors or laborers and that politics is a process that is intimately local as well as global. The farm financial crisis of the 1980s precipitated rapid consolidation of farms and a sharp decline in rural populations. It brought new actors into the political process including organic farmers and environmentalists. *Fighting for the Farm: Rural America Transformed* considers the politics of farm policy and the consequences of the increasing alignment of agricultural interests with the global economy. The first section of the book places North American agriculture in the context of the world system; the second a series of case studies examines the foundations of current U.S. policy; subsequent sections deal with the political implications for daily life and the politics of the environment. Recognizing the influence of an array of political constituencies and arenas *Fighting for the Farm* charts a decisive shift since the early part of the twentieth century from a discursive regime rooted in economics to one that now incorporates a variety of environmental and quality of life concerns. **The Global Restructuring of Agro-food Systems** Philip McMichael, 1994

*Taking Southeast Asia to Market* Joseph Nevins, Nancy Lee Peluso, 2018-09-05 Recent changes in the global economy and in Southeast Asian national political economies have led to new forms of commodity production and new commodities. Using insights from political economy and commodity studies the essays in *Taking Southeast Asia to Market* trace the myriad ways recent alignments among producers, distributors and consumers are affecting people and nature throughout the region. In case studies ranging from coffee and hardwood products to mushroom pickers and Vietnamese factory workers the authors detail the Southeast Asian articulations of these processes while also discussing the broader implications of these shifts. Taken together the cases show how commodities illuminate the convergence of changing social forces in Southeast Asia today as they transform the terms, practices and experiences of everyday life and politics in the global economy. **The Global Food Economy** Tony Weis, 2008-12-08 The *Global Food Economy* examines the human and ecological cost of what we eat. The current food economy is characterized by immense contradictions. Surplus food mountains, bountiful supermarkets and rising levels of obesity stand in stark contrast to widespread hunger and malnutrition. Transnational companies dominate the market in food and benefit from subsidies whilst farmers in developing countries remain impoverished. Food miles, mounting toxicity and the ecological footprint of livestock mean that the global food economy rests on increasingly shaky environmental foundations. This book looks at how such a system came about and how it is being enforced by the WTO.

Ultimately Weis considers how we can find a way of building socially just ecologically rational and humane food economies
