Global Water Cycle:

The Global Water Cycle Elizabeth Kay Berner, Robert A. Berner, 1987 **Global Energy and Water Cycles** K. A. Browning, R. J. Gurney, 1999-02 A comprehensive treatment of models and processes related to water fluxes for meteorologists hydrologists and oceanographers *Terrestrial Water Cycle and Climate Change* Qiuhong Tang, Taikan Oki, 2016-07-25 The *Terrestrial Water Cycle Natural and Human Induced Changes* is a comprehensive volume that investigates the changes in the terrestrial water cycle and the natural and anthropogenic factors that cause these changes This volume brings together recent progress and achievements in large scale hydrological observations and numerical simulations specifically in areas such as in situ measurement network satellite remote sensing and hydrological modeling Our goal is to extend and deepen our understanding of the changes in the terrestrial water cycle and to shed light on the mechanisms of the changes and their consequences in water resources and human well being in the context of global change Volume highlights include Overview of the changes in the terrestrial water cycle Human alterations of the terrestrial water cycle Recent advances in hydrological measurement and observation Integrated modeling of the terrestrial water cycle The *Terrestrial Water Cycle Natural and Human Induced Changes* will be a valuable resource for students and professionals in the fields of hydrology water resources climate change ecology geophysics and geographic sciences The book will also be attractive to those who have general interests in the terrestrial water cycle including how and why the cycle changes

Review of USGCRP Plan for a New Science Initiative on the Global Water Cycle National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Water Science and Technology Board, Committee on a Review of A Plan for a New Science Initiative on the Global Water Cycle, 2002-05-09 In 2001 the U S Global Change Research Program produced the report *A Plan for a New Science Initiative on the Global Water Cycle* This report was designed to represent a research strategy and scientific plan for investigating the global water cycle and its interactions with climate and for developing an enhanced understanding of the fundamental processes that govern the availability and biogeochemistry of water resources The USGCRP managers are currently considering how to move forward with implementation of this ambitious broad and potentially very fruitful plan on an interagency basis and it requested that the National Research Council NRC advise them in this regard This report *Review of USGCRP Plan for a New Science Initiative on the Global Water Cycle* provides comments on the water cycle science plan as related to its recommended scientific initiatives and goals and it provides comments on the usefulness of the water cycle science plan to the USGCRP agencies in developing a coordinated global water cycle implementation plan **Global Ecodynamics** , 2004-07 Opening with a survey of contemporary global ecodynamics including its basic components this book goes on to discuss greenhouse effect problems in the context of global carbon cycle dynamics The coverage includes land ecosystem changes air sea exchange models high latitude environmental dynamics and a discussion of basic aspects of global environmental modelling and relevant monitoring systems The volume

concludes by examining society systems with emphasis on the problems of sustainable development

The Earth's Hydrological Cycle L. Bengtsson,R.-M. Bonnet,M. Calisto,G. Destouni,R. Gurney,J. Johannessen,Y. Kerr,W.A. Lahoz,M. Rast,2014-05-02 This book gives a comprehensive presentation of our present understanding of the Earth s Hydrological cycle and the problems consequences and impacts that go with this topic Water is a central component in the Earth s system It is indispensable for life on Earth in its present form and influences virtually every aspect of our planet s life support system On relatively short time scales atmospheric water vapor interacts with the atmospheric circulation and is crucial in forming the Earth s climate zones Water vapor is the most powerful of the greenhouse gases and serves to enhance the tropospheric temperature The dominant part of available water on Earth resides in the oceans Parts are locked up in the land ice on Greenland and Antarctica and a smaller part is estimated to exist as groundwater If all the ice over the land and all the glaciers were to melt the sea level would rise by some 80 m In comparison the total amount of water vapor in the atmosphere is small it amounts to 25 kg m² or the equivalent of 25 mm water for each column of air Yet atmospheric water vapor is crucial for the Earth s energy balance The book gives an up to date presentation of the present knowledge Previously published in Surveys in Geophysics Volume 35 No 3 2014

Water Trading and Global Water Scarcity Josefina Maestu,2013 Water scarcity is an increasing problem in many parts of the world yet conventional supply side economics and management are insufficient to deal with it One of the key water management options for water demand is water trading This book explores the role of water trading as an instrument of integrated water resources management

Global Carbon Cycle and Climate Change Kirill I [A]kovlevich Kondrat'ev,Vladimir F. Krapivin,Costas Varotsos,2003-09-24 Professor Kondratyev and his team consider the concept of global warming due to the greenhouse effect and put forward a new approach to the problem of assessing the impact of anthropogenic processes Considering data on both sources and sinks for atmospheric carbon and various conceptual schemes of the global carbon dioxide cycle they suggest a new approach to studies of the problem of the greenhouse effect They assess the role of different types of soil and vegetation in the assimilation of carbon dioxide from the atmosphere and discuss models of the atmosphere ocean gas exchange and its role in the carbon dioxide cycle paying special attention to the role of the Arctic Basin The authors also consider models of other global atmospheric cycles for a range of atmospheric constituents and conclude by drawing together a range of scenarios on modelling the global carbon cycle
