**Globalization, Health, and the Environment** Greg Guest, 2005-09-29 Leading health scholars reveal the impact of globalization on human health as it is mediated through environmental change They explore the destabilizing impact of globalization on the planet's ecology and on the health of the human populations that are dependent on the delicate global bionetwork Their timely case studies describe the cultural adaptations of indigenous populations to their changing environments evaluating their technological and global political economic processes The authors analyze local and global public health strategies examine the association between globalization and demographics and offer creative solutions for future health policies This book will be a valuable resource for professionals in international health medical anthropology sociology and geography environmental studies and globalization studies

*Globalization and the World Ocean* Peter Jacques, 2006-05-04 Jacques offers a unique analysis of the connections between global marine and atmospheric science to global political phenomena He shows how human survival is intricately linked to the sustainability of the world ocean a singular connected body of regional oceans that is by definition a global resource that touches all other ecosystems Jacques warns that the world ocean now offers evidence of several existential crises for global human populations including declining global fisheries coral reef losses and climate change but there has been a lack of global or regional cooperation in sustaining this complex ecosystem He suggests how we can synthesize and coordinate global ecological information exploring three regional areas in their local and global context the South Pacific Caribbean basin and Southeast Asia His book will be a valuable resource for researchers and students in environmental studies marine sciences and globalization studies

Routledge Handbook of Environmental Anthropology Helen Kopnina, Eleanor Shoreman-Ouimet, 2016-08-12 Environmental Anthropology studies historic and present human environment interactions This volume illustrates the ways in which today's environmental anthropologists are constructing new paradigms for understanding the multiplicity of players pressures and ecologies in every environment and the value of cultural knowledge of landscapes This Handbook provides a comprehensive survey of contemporary topics in environmental anthropology and thorough discussions on the current state and prospective future of the field in seven key sections As the

contributions to this Handbook demonstrate the subfield of environmental anthropology is responding to cultural adaptations and responses to environmental changes in multiple and complex ways As a discipline concerned primarily with human environment interaction environmental anthropologists recognize that we are now working within a pressure cooker of rapid environmental damage that is forcing behavioural and often cultural changes around the world As we see in the breadth of topics presented in this volume these environmental challenges have inspired renewed foci on traditional topics such as food procurement ethnobiology and spiritual ecology and a broad new range of subjects such as resilience nonhuman rights architectural anthropology industrialism and education This volume enables scholars and students quick access to both established and trending environmental anthropological explorations into theory methodology and practice     **A**

**Companion to the Anthropology of Environmental Health** Merrill Singer, 2016-05-31 A Companion to the Anthropology of Environmental Health presents a collection of readings that utilize a medical anthropological approach to explore the interface of humans and the environment in the shaping of health and illness around the world Features the latest ethnographic research from around the world related to the multiple impacts of the environment on health and of societies on their environments Includes contributions from international medical anthropologists conservationists environmental experts public health professionals health clinicians and other social scientists Analyzes the conditions of cultural and social transformation that accompany environmental and ecological impacts in all areas of the world Offers critical perspectives on theoretical and methodological advancements in the anthropology of environmental health along with future directions in the field     *The World's Scavengers* Martin Medina, 2007-05-03 Medina tells us that up to 2% of the urban population in

developing countries survives by salvaging materials from waste for recycling which represents up to 64 million scavengers in the world today Despite these numbers we know little about the impact of scavenging on global capitalism development The author examines its historical evolution and its linkages with formal and informal sector productive activities in capitalist and non capitalist societies in case studies from Mexico Brazil Colombia Argentina Egypt the Philippines and India His new book radically alters popular perceptions on scavenging demonstrating that many widely held beliefs are wrong scavenging is not primarily the activity of the poor nor is it a strictly marginal activity the economic impact of scavenging is significant and can increase industrial competitiveness and scavenging can be compatible with a sustainable waste management system Scavenging represents an adaptive response to poverty yet at the same time it can be a resource to cities whose contributions should be recognized and understood     **Computing Our Way to Paradise?** Robert Rattle, 2010 Rattle's new

book challenges key assumptions concerning the role of Internet and communication technologies ICTs in globalization processes The author argues that while globalization is predicated upon a strong extensive and interconnected global ICT network of products processes and services the real environmental and health benefits remain far from certain ICTs have been promoted as the next economic wave with the potential to generate jobs wealth and prosperity to surpass that of the

industrial era It is assumed the environmental impacts will be negligible or even beneficial in this shift towards a service economy Rattle investigates these current and expected trends in ICTs and their potential contribution to sustainable development His book is an indispensable overview for researchers and instructors in globalization Internet communication technologies and environmental anthropology or sociology as well as a resource for policy makers in environmental protection sustainable development sustainable consumption and the social role of science and technology sustainable consumption and the social role of science and technology sustainable consumption and the social role of science and technology *Global Capitalism and Climate Change* Hans A. Baer, 2012-06-28 Many progressive scholars particularly in the social sciences have increasingly come to acknowledge that anthropogenic climate change constitutes yet another contradiction of global capitalism This book constitutes an effort to develop a critical social science of climate change one that posits its roots in global capitalism with its emphasis on profit making a treadmill of production and consumption heavy reliance on fossil fuels and commitment to ongoing economic expansion It explores the systemic changes necessary to create a more socially just and sustainable world system that would possibly start to move humanity toward a safer climate and discusses the role of a burgeoning climate movement in this effort

**Saving Forests, Protecting People?** John Schelhas, Max J. Pfeffer, 2009-03-16 Tropical forest conservation is attracting widespread public interest and helping to shape the ways in which environmental scientists and other groups approach global environmental issues Schelhas and Pfeffer show that globally driven forest conservation efforts have had different results in different places ranging from violent protest to the discovery of common ground among conservation programs and the various interests of local peoples The authors examine the connections between local values material needs and environmental management regimes *Saving Forests Protecting People* explores that difficult terrain where culture the environment and social policies meet

**World in Motion** Gary M. Kroll, Richard H. Robbins, 2008-12-16 The essays collected in *World in Motion* all address the same issue The global paradox that modern prosperity has entailed extreme environmental degradation Gary M Kroll and Richard H Robbins present readings covering all principal viewpoints on this matter from the neoliberal belief that environmental and social problems can be fixed through a growing economy to the critics of globalization who equate growth with environmental degradation This book asks an important question Can we simply accelerate growth under the assumption that increased prosperity and new technologies will allow us to reverse environmental damage Or do we need to transform our modes of living radically to maintain the health of the world around us

**War and Nature** Jurgen Brauer, 2009-10-15 The inherent dangers of war zones constrain even the most ardent researchers with the consequence that little has been known for certain about the effects of war on stable environments *War and Nature* sifts through the available data from past wars to evaluate the actual impact that combat has on natural surroundings Examining conflicts of various kinds the long war in tropical Vietnam the relatively brief and highly technical

wars in the Persian Gulf and various civil wars in Africa and South Central Asia fought with small arms Brauer asks whether differences in technology location and duration are critical in causing environmental and humanitarian harm A number of unexpected conclusions are drawn from this data including practical agendas for collecting scientific evidence in future wars and suggestions about what the world s environmental and conservation organizations can do One thing War and Nature does is to show us how globalization can be a force harnessed for good ends
