## **Globular Cluster Systems:**

Globular Cluster Systems Keith M. Ashman, Stephen E. Zepf, 1998 The first comprehensive review of globular cluster systems for researchers and graduate students      **The Harlow-Shapley Symposium on Globular Cluster Systems in Galaxies** Jonathan E. Grindlay, A.G. Davis Philip, 2012-12-06 In the centennial year 1985 86 of Harlow Shapley's birth the study of globular clusters was no less important to the development of astronomy than in 1915 when Shapley first noted their concentration on the sky By 1917 Shapley had used the properties of the system of globular clusters to complete the Copernican revolution and locate the solar system and its Earth bound observers far from the center of the Galaxy and the globular cluster distribution Seven decades later in the year of these proceedings globular cluster research and the study of the system of globular clusters in our own and distant galaxies is undergoing a renaissance of activity The introduction of new observational tools particularly CCD imagers and digital spectrographs as well as powerful theoretical methods have transformed the study of globular clusters into one of the main line areas of modern astrophysics Thus it seemed particularly appropriate to one of us when considering how the Harvard College Observatory might mark the Shapley centennial to propose and plan for an IAU Symposium on Globular Cluster Systems in Galaxies Planning for the Shapley Symposium as it came to be called was even more drawn out than the preparation of this volume The Symposium was originally proposed to the IAU Secretariat in time for it to be held in August 1985 so that it might occur in the centennial calendar year

Globular Cluster Systems and Their Implications of Galaxy Formation Jaeil Cho, 2008      **Globular Clusters - Guides to Galaxies** Tom Richtler, Søren Larsen, 2008-11-23 The principal question of whether and how globular clusters can contribute to a better understanding of galaxy formation and evolution is perhaps the main driving force behind the overall endeavour of studying globular cluster systems Naturally this splits up into many individual problems The objective of the Joint ESO FONDAP Workshop on Globular Clusters Guides to Galaxies was to bring together researchers both observational and theoretical to present and discuss the most recent results Topics covered in these proceedings are internal dynamics of globular clusters and interaction with host galaxies tidal tails evolution of cluster masses accretion of globular clusters detailed descriptions of nearby cluster systems ultracompact dwarfs formations of massive clusters in mergers and elsewhere the ACS Virgo survey galaxy formation and globular clusters dynamics and kinematics of globular cluster systems and dark matter related problems With its wide coverage of the topic this book constitutes a valuable reference of the scientific knowledge of the field      **The Harlow-Shapley Symposium on Globular Cluster Systems in Galaxies** Jonathan E. Grindlay, A.G. Davis Philip, 2012-07-05 In the centennial year 1985 86 of Harlow Shapley's birth the study of globular clusters was no less important to the development of astronomy than in 1915 when Shapley first noted their concentration on the sky By 1917 Shapley had used the properties of the system of globular clusters to complete the Copernican revolution and locate the solar system and its Earth bound observers far from the center of the Galaxy and the globular cluster distribution Seven

decades later in the year of these proceedings globular cluster research and the study of the system of globular clusters in our own and distant galaxies is undergoing a renaissance of activity The introduction of new observational tools particularly CCD imagers and digital spectrographs as well as powerful theoretical methods have transformed the study of globular clusters into one of the main line areas of modern astrophysics Thus it seemed particularly appropriate to one of us when considering how the Harvard College Observatory might mark the Shapley centennial to propose and plan for an IAU Symposium on Globular Cluster Systems in Galaxies Planning for the Shapley Symposium as it came to be called was even more drawn out than the preparation of this volume The Symposium was originally proposed to the IAU Secretariat in time for it to be held in August 1985 so that it might occur in the centennial calendar year

**Dynamics of Globular Cluster Systems** Carl J. Grillmair,1992 *Globular Cluster Systems as Clues to the Formation and Evolution of Early Type Galaxies* Markus Kissler-Patig,1997 Extragalactic Globular Cluster Systems Markus Kissler-Patig,2003-07-21 Dramatic progress is a trademark of the recent study of globular cluster systems Considerations about the formation and evolution compose the first chapter followed by a chapter on young star clusters Then come four chapters reviewing the globular cluster system of early type late type and dwarf galaxies as well as of groups of galaxies One chapter is dedicated to stellar population models and their applications to the field Finally a chapter reviews the kinematics of galaxies derived from globular cluster systems and another their role in the context of galaxy formation and evolution studies As a whole the book gives an up to date view of the field at the beginning of the new decade which will without doubt again bring significant progress in our understanding of globular cluster systems and galaxy formation and evolution

*~Theæ properties of globular cluster systems in galaxies* Tom Richtler,1992 Globular Cluster Systems in Galaxies Harlow Shapley,International Astronomical Union,1988 Star Clusters B.W. Carney,W.E. Harris,2006-04-18 Star clusters are at the heart of astronomy being key objects for our understanding of stellar evolution and galactic structure Observations with the Hubble Space Telescope and other modern equipment have revealed fascinating new facts about these galactic building blocks This book provides two comprehensive and up to date pedagogically designed reviews on star clusters by two well known experts in the field Bruce Carney presents our current knowledge of the relative and absolute ages of globular clusters and the chemical history of our Galaxy Bill Harris addresses globular clusters in external galaxies and their use as tracers of galaxy formation and cosmic distance indicators The book is written for graduate students as well as professionals in astronomy and astrophysics

**Dynamical Evolution of Dense Stellar Systems (IAU S246)** International Astronomical Union. Symposium,2008-06-12 Dense stellar systems lie at the interface between dynamics stellar evolution and galaxy formation and they provide us with an ideal laboratory to understand many different aspects of these important fields as well as to

explore the interplay between them The complete study of dense stellar systems is a very challenging task which requires the collaboration and the exchange of ideas of astronomers and physicists with observational and theoretical expertise in galactic and extra galactic astronomy stellar dynamics hydrodynamics stellar evolution as well as knowledge of many aspects of computational physics IAU Symposium 246 brought together experts in all these areas to cover the broad field of dense stellar systems with particular emphasis on the interplay between them and on the comparison between observations and simulations This volume provides a complete review of the most recent studies in this topical research

Globular Clusters GCs are powerful tools for understanding the formation of galaxies GCs are located in the halos of galaxies and due to their age and density have borne witness to the major formation events of a galaxy's lifetime One may study these objects using a wide array of techniques and datasets including wide field ground based imaging deep space based imaging and spectroscopy All approaches involve tradeoffs and in this work we consider a variety of ways to study GC systems in imaging data We examine a wide field HST ACS mosaic of the nearby lenticular galaxy NGC 3115 selecting a high quality GC sample using the superior resolution of the ACS data We find strong color bimodality in the GC system of NGC 3115 and examine a number of trends in the properties of the GC system Next we consider the situation where one is limited to ground based imaging where contaminants to the GC population are a major concern We detail a novel statistical methodology in which we treat the GC population and the contaminant population as a mixture model and evaluate the model in a Bayesian context We demonstrate the performance of the model on mock data and note some areas where current analysis of GC systems may be missing information using traditional selection techniques We also apply this Bayesian methodology to a subset of SLUGGS survey galaxies with high quality photometry from either the MegaCam instrument on the Canada France Hawaii Telescope or the SuprimeCam instrument on the Subaru Telescope In most cases the mixture model recovers the GC system well often finding the traditional bimodality and providing well calibrated statistical uncertainties for the global parameters of the GC system Finally we examine the object NGC 3628 UCD1 a star cluster slightly more massive than the largest GCs We identify that UCD1 is located in a stellar stream around the galaxy NGC 3628 and therefore is in the process of being accreted We characterize UCD1 both in wide field SuprimeCam imaging and in Keck ESI spectroscopy and identify a number of interesting parallels between UCD1 and omega Cen the largest Milky Way GC

**Nearly Normal Galaxies** Sandra M. Faber, 2012-12-06 It is sometimes said that astronomy is the crossroads of physics In the same spirit it can forcefully be argued that galaxies are the crossroads of astronomy Internal processes within galaxies involve all of the fundamental components of astrophysics stellar evolution star formation low density

astrophysics dynamics hydrodynamics and high energy astrophysics Indeed one can hardly name an observational datum in any wavelength range on any kind of celestial object that does not provide a useful clue to galaxy formation and evolution Although internal processes in galaxies until recently occupied most of our attention we now know that it is also vital to relate galaxies to their environment How galaxies congregate in larger structures and are in turn influenced by them are crucial questions for galactic evolution On a grander level we have also come to regard galaxies as the basic building blocks of the universe the basic units whereby the large scale structure of the universe is apprehended and quantified On a grander level still we also believe strongly that galaxies are the direct descendents of early density irregularities in the Big Bang Galaxy properties are now viewed as providing a crucial constraint on the physics of the Big Bang and a vital link between the macroscopic and microscopic structure of the universe      **Newsletter** ,1992
