The Cordilleran Miogeosyncline in North America Henry V. Lyatsky, Vadim B. Lyatsky, 2006-04-10 Steep crustal scale faults having their origins in the Late Archean and Early Proterozoic and trending NE SW which define the fundamental block lithospheric structure of the North American craton are seen from geological and geophysical evidence to continue far into the interior of the Late Proterozoic Phanerozoic Canadian Cordilleran mobile megabelt This suggests that variously reworked ex cratonic basement blocks underlie much of the Cordillera The western edge of the modern craton is probably near the Rocky Mountain Omineca belt boundary the Rocky Mountain fold and thrust belt on the east side of the Cordillera is evidently rootless and overlies the undisturbed cratonic basement Phanerozoic differences between the Cordilleran tectonic belts resulting from a long dissimilar multi cycle history of waxing and waning orogenesis apparent from the rock record lie chiefly in the degree of indigenous tectonic remobilization and reworking of the ancient crust

Ramberg, 2008 The Making of a Land Geology of Norway takes the reader on a journey in geological time from primordial times to the present day A fantastic journey from the summits of Norway's spectacular rugged and weather beaten mountains to the riches concealed in the sedimentary rocks on the continental shelf This book displays the treasures of Norwegian geology for everyone to see Norway's geological resources represent the foundation of its welfare state During several centuries first the mining and then the oil industries have been economic mainstays and this will continue in the future The book presents a description both of Norway and the planet we inhabit and depend on for our survival It is lavishly illustrated with photographs and maps from all over the country Patina on Historic Glass Penelope Clifford, Vic Semeniuk, 2020-12-15 This book explores patina a micro crust of interlaminated silica and calcite developed on bottle glass that was partially buried for 70 100 years in dunes at Cossack Western Australia and is a world first in the detailed holistic study of this phenomenon It maps out a multifaceted approach involving soil chemistry granulometry mineralogy soil water hydrochemistry glass chemistry SEM mapping of patina and XRD and SEM EDS analyses as well as experimental leaching and pellicular water analyses of sand and dust in which the glass was embedded to highlight that to fully use patina for archaeological hydrochemical geochemical and climate studies there must be a multidisciplinary approach The patina on glass from Cossack yielded a wealth of micro structures providing insights into the processes of its formation Patination is complex reflecting wet and dry vadose conditions alternating acid and alkaline conditions and requiring many factors to be taken into account to obtain a comprehensive understanding of its development In practical terms properly used patina and its internal structures can date glass for use in archaeology determine soil and hydrochemical processes of solution precipitation and illuviation and unravel local intra decadal climate patterns The weathering metastability of glass also points to potential problems in recycling glass for use in infrastructure construction materials and containers for toxic waste and nuclear waste The Terrane Puzzle Robert B. Blodgett, George D. Stanley, 2008 Displaced or tectonostratigraphic terranes comprise a huge portion of real estate in the North American Cordillera Terranes are discrete fault bound blocks of regional extent with rocks and fossils that differ to a great extent from those of adjacent blocks The allochthonous nature of most terranes relative to adjacent craton is well established When mapped they resemble a collage of mixed rock types tectonic styles metamorphism and volcanic origins each part resembling the pieces of a puzzle Terrane studies remain integral to understanding the geological evolution of western North America Since the initiation of the concept summarized in 1979 by the late David L Jones the significance of fossils and stratigraphy has been key to solving the puzzle Chapters of this book written by experts in their field provide a sense of the diversity of approaches in paleontology and stratigraphy Contributions span geologic time from the Precambrian Vendian to Cretaceous and address over 20 Cordilleran terranes Publisher's website Proterozoic Tectonic Evolution of the Grenville Orogen in North America Richard P.
