It has become an essential tool in creating a greener chemical industry by replacing more traditional stoichiometric reactions which have high energy consumption and high waste production with mild processes which increasingly resemble Nature's enzymes. *Metal Catalysis in Industrial Organic Processes* considers the major areas of the field and discusses the logic of using catalysis in industrial processes. The book provides information on oxidation, hydrogenation, carbonylation, C-C bond formation, metathesis, and polymerization processes, as well as on the mechanisms involved. In addition, two appendices offer a concise treatment of homogeneous and heterogeneous catalysis. Numerous exercises referring to problems of catalytic processes and research perspectives complete the book. This definitive reference source, written by practising experts in the field, provides detailed and up-to-date information on key aspects of metal catalysis.
