Seismicity, Fault Rupture and Earthquake Hazards in Slowly Deforming Regions A. Landgraf, S. Kuebler, E. Hintersberger, S. Stein, 2017-01-30 Palaeoseismic records and seismological data from continental interiors increasingly show that these areas of slow strain accumulation are more subject to seismic and associated natural hazards than previously thought Moreover some of our instincts developed for assessing hazards at plate boundaries might not apply here Hence assessing hazards and drawing implications for the future is challenging and how well it can be done heavily depends on the ability to assess the spatiotemporal distribution of past large earthquakes This book explores some key issues in understanding hazards in slowly deforming areas Examples include classic intraplate regions such as Central and Northern Europe Mongolia Inner Mongolia Australia and North and South America and regions of widely distributed strain such as the Tien Shan Mountains in Central Asia The papers in this volume are grouped into two sections The first section deals with instrumental and historical earthquake data and associated hazard assessments The second section covers methods from structural geology palaeoseismology and tectonic geomorphology and incorporates field evidence **Engineering Geology for Society and Territory - Volume 2** Giorgio Lollino, Daniele Giordan, Giovanni B.

Crosta, Jordi Corominas, Rafiq Azzam, Janusz Wasowski, Nicola Sciarra, 2014-09-16 This book is one out of 8 IAEG XII Congress volumes and deals with Landslide processes including field data and monitoring techniques prediction and forecasting of landslide occurrence regional landslide inventories and dating studies modeling of slope instabilities and secondary hazards e g impulse waves and landslide induced tsunamis landslide dam failures and breaching hazard and risk assessment

earthquake and rainfall induced landslides instabilities of volcanic edifices remedial works and mitigation measures
 development of innovative stabilization techniques and applicability to specific engineering geological conditions use of
 geophysical techniques for landslide characterization and investigation of triggering mechanisms Focuses is given to
 innovative techniques well documented case studies in different environments critical components of engineering geological
