Heating And Cooling:

Heating and Cooling of Buildings Jan F. Kreider, Peter S. Curtiss, Ari Rabl, 2009-12-28 The art and the science of building systems design evolve continuously as designers practitioners and researchers all endeavor to improve the performance of buildings and the comfort and productivity of their occupants Retaining coverage from the original second edition while updating the information in electronic form Heating and Cooling of Buildings Design for Efficiency Revised Second Edition presents the technical basis for designing the lighting and mechanical systems of buildings Along with numerous homework problems the revised second edition offers a full chapter on economic analysis and optimization new heating and cooling load procedures and databases and simplified procedures for ground coupled heat transfer calculations The accompanying CD ROM contains an updated version of the Heating and Cooling of Buildings HCB software program as well as electronic appendices that include over 1 000 tables in HTML format that can be searched by major categories a table list or an index of topics Ancillary information is available on the book s website www.hbccentral.com From materials to computers this edition explores the latest technologies exerting a profound effect on the design and operation of buildings Emphasizing design optimization and critical thinking the book continues to be the ultimate resource for understanding energy use in buildings

System Performance: Maximizing Energy Efficiency in Heating and Cooling Randy F. Petit, Sr., Turner L. Collins, Earl Delatte, Erik Rasmussen, 2014-07-01 Heating Ventilation Air Conditioning HVAC equipment is only as good as the installation Studies show that the majority of HVACR equipment is not installed to manufacturer specifications costing the consumer more money 68% of all air conditioning systems are improperly charged 70% of all systems have improper airflow 91% of systems remain untested for combustion safety and efficiency The System Performance training manual is broken into four sections Each section covers the techniques and procedures required for a technician to maximize the energy efficiency of HVAC systems 1 Airflow Covers the properties of air airflow measuring tools CFM calculations requirements blower performance and sensible heat ratios 2 Critical Charging Reviews the three charging methods by weight system superheat and condenser subcooling It gives examples of calculating the total charge based on line sizes and provides an easy method to check whether a system is operating to rated capacity 3 Psychrometrics Covers the parts of a psychrometric chart and calculating the thermodynamic properties of air Also this section demonstrates using wet and dry bulb temperatures to plot air conditions being heated or cooled which enables the technician to obtain a systems effect on sensible and latent building load 4 Combustion Analysis This section reviews the basic combustion process and the factors that affect heating efficiency Proper methods for furnace setting of airflow adjustment and testing fuel pressure and flue gas venting

Cabeza,2008-08-15 The years 2006 and 2007 mark a dramatic change of peoples view regarding climate change and energy consumption The new IPCC report makes clear that mankind plays a dominant role on climate change due to CO emissions from energy consumption and that a significant reduction in CO emissions is necessary within decades At the same time the supply of fossil energy sources like coal oil and natural gas becomes less reliable In spring 2008 the oil price rose beyond 100 barrel for the first time in history It is commonly accepted today that we have to reduce the use of fossil fuels to cut down the dependency on the supply countries and to reduce CO emissions The use of renewable energy sources and increased energy efficiency are the main strategies to achieve this goal In both strategies heat and cold storage will play an important role People use energy in different forms as heat as mechanical energy and as light With the discovery of fire humankind was the first time able to supply heat and light when needed About 2000 years ago the Romans started to use ceramic tiles to store heat in under floor heating systems Even when the fire was out the room stayed warm Since ancient times people also know how to cool food with ice as cold storage *Solar Home Heating and Cooling Demonstration Act, Hearings Before the Subcommittee on Housing and Urban Affairs of ..., 93-2 on S. 2540 ..., S. 2650 ..., H.R. 11864 ..., 93-2,*
