**Heatwave** Philip Steele, Tony Kenyon, 1991-01-01 Explains how a high pressure system can cause prolonged periods of high temperatures Includes related activities and experiments

**The Nature, Causes, Effects and Mitigation of Climate Change on the Environment** Stuart Harris, 2022-03-09 This book examines global warming and climate change over the past five decades in mainly subtropical and tropical countries The amount and types of changes in these countries vary with the environment but are often less than those occurring in the Arctic and northern countries Chapters address such topics as the controversy surrounding global warming the effects of climate change on agriculture changes in land use and hydrology and more

**Heatwaves** Glenn McGregor, 2024-10-09 Distinctively this book brings together an end to end understanding of heatwaves that is a consideration of their causes consequences for human and natural systems and societal responses to them in the form of adaptation and mitigation actions It advocates for recognizing the heatwave imperative and emphasizes that heatwaves matter Together the individual chapters make the point that knowing heatwaves from a holistic interdisciplinary perspective will assist with efforts towards heatwave risk reduction and building resilience to what is probably the most pervasive of a range of climate hazards The book will be of interest to upper level undergraduate and taught postgraduate students and researchers in geography climatology environmental atmospheric and population health sciences as well as climate and health researchers urban planners policy makers and the informed public with an interest in climate and society issues

**Extreme Weather - Understanding the Causes, Impacts and Solutions** Grant Kelly, 2024-10-04 Extreme Weather Understanding the Causes Impacts and Solutions explores the science behind hurricanes heatwaves floods and other extreme weather phenomena It examines their devastating effects on communities and ecosystems highlights human contributions to climate change and provides actionable solutions for mitigation and adaptation to help build a resilient future

**River, Sediment and Hydrological Extremes: Causes, Impacts and Management** Manish Pandey, Anil Kumar Gupta, Giuseppe Oliveto, 2023-10-17 This edited book provides a platform for knowledge sharing in all areas related to the rivers sediment and hydrological extremes It explains the hypothesis that river flow and sediment transport are intimately linked to erosion scour and sediment deposition Sediment transport erosion and deposition are driven by local base level changes and are highly variable in space and time These concepts have serious implication for understanding the recent development of the River Sediment and Hydrological Extremes The natural hazards posed by hydrologic events and river systems depend on the uncertainty of hydrological events This ability is affected by change in climatic conditions Climate change studies have revealed that the frequency of extreme weather phenomena with increasing damage to human assets has gradually grown worldwide As a consequence rainfall events concentrated in time and space are expected to lead to serious local flooding and sediment transport in many parts of the world Floods are remarkable hydro meteorological phenomena and forceful agents of geomorphic evolution in most physical geographical belts and from the

viewpoint of human society among the most important environmental hazards According to the Indian Environment Agency floods rank as number one on the list of natural disasters in India over the past decade This book is an attempt to fill the gap in literature and bring forth evidence based latest research about precise estimation of erosion and scour which is essential to reduce the hazards The book explains that lack of preparedness and appropriate adaptation strategy makes people more risk prone It highlights the vulnerability in South Asia region about the impacts of flood sediments and river hazards because a large portion of its population depends on sensitive sectors like agriculture and forestry for livelihoods and several other reasons The book is relevant for academicians researchers and students of disaster management hydrology and ecology

*Climate Change and the Health Sector* Alexander Thomas, K. Srinath Reddy, Divya Alexander, Poornima Prabhakaran, 2021-11-22 The health sector is known to be one of the major contributors towards the greenhouse gas emissions causing the climate crisis the greatest health threat of the 21st century This volume positions the health sector as a leader in the fight against climate change and explores the role of the health system in climate policy action It delivers an overview of the linkages between climate change and the health sector with chapters on the impact of climate change on health its connection to pandemics and its effects on food nutrition and air quality while examining gendered and other vulnerabilities It delves into the different operational aspects of the health sector in India and details how each one can become climate smart to reduce the health sector's overall carbon footprint by looking at sustainable procurement green and resilient healthcare infrastructure and the management of transportation energy water waste chemicals pharmaceuticals and plastics in healthcare Well supplemented with rigorous case studies the book will be indispensable for students teachers and researchers of environmental studies health sciences and climate change It will be useful for healthcare workers public health officials healthcare leaders policy planners and those interested in climate resilience and preparedness in the health sector The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license **Climate Change Science** Shreya

Joshi, 2025-02-20 *Climate Change Science A Comprehensive Synthesis* delves into the complex field of climate change science exploring the causes impacts and potential solutions to the changes in our climate system While the Earth's climate has always experienced natural variations the current changes are largely driven by human activities primarily the increase in greenhouse gases from burning fossil fuels and deforestation These gases trap heat leading to the greenhouse effect Scientists study climate change using direct observations paleoclimate data and climate models that simulate interactions between the atmosphere oceans land and ice These models help predict future climate scenarios and understand the mechanisms shaping our climate The evidence for climate change is overwhelming with rising global temperatures melting ice caps rising sea levels and more frequent extreme weather events impacting ecosystems agriculture water resources and

human health A key challenge in climate change science is distinguishing natural climate variability from human induced changes By studying paleoclimate data scientists can compare past climate conditions to the present and establish the role of human activities Climate models despite uncertainties consistently project that without significant reductions in greenhouse gas emissions global temperatures will continue to rise leading to severe impacts Mitigating climate change requires reducing greenhouse gas emissions and transitioning to cleaner energy sources increasing energy efficiency adopting renewable energy technologies and promoting sustainable land use practices International agreements like the Paris Agreement aim to limit global warming and reduce its impacts

**Urban Overheating: Heat Mitigation and the Impact on Health** Nasrin Aghamohammadi, Mat Santamouris, 2022-10-05 The book reviews and reports the recent progress and knowledge on the specific impact of current and projected urban overheating as well as of the urban mitigation technologies on mortality and morbidity and urban vulnerability It presents recent data and developments on the topic reported by some of the more distinguished researchers in this area In parallel it discusses new findings related to the characteristics and the magnitude of urban overheating and reports and analyzes the recent knowledge on the synergies between urban heat island and heatwaves This book helps to advance our understanding on the interaction between Urban Heat Island UHI and overheating as well as their impact on energy demand and public health globally Exploring the interaction between UHI and energy consumption requires the understanding on the dynamics of UHI intensity and air pollution index in different land use and how such interactions may vary in different cities in the world Moreover this book focuses on different cities in Australia Austria Belgium Brazil Canada Cyprus Greece Hong Kong India Asia Spain UK and USA Livable Cities Mohsen Aboulnaga, Antonella Trombadore, Mona Mostafa, Ahmed Abouaiana, 2024-07-01 Livable Cities Urban Heat Islands Mitigation for Climate Change Adaptation Through Urban Greening elucidates on livability in urban areas providing readers with definitions and indicators of what makes a city livable It comprehensively introduces the urban heat island effect UHIE and offers strategies for mitigating high surface temperatures in metropolitan areas and adapting to climate change CC The coverage highlights the linkage between UHIE and Sustainable Development Goals SDGs the socio economic impacts of urban heat islands UHIs their effect on livability for citizens and the costs and benefits of mitigating UHI In addition it encompasses background information about the problems and challenges that megacities face in the 21st century followed by the cooling benefits that can be achieved from the different types of urban green coverage UGC whether conventional or innovative The book presents case studies on six cities that have successfully applied UGC Chicago United States Curitiba Brazil Stuttgart Germany Tokyo Asia Melbourne Australia and Johannesburg South Africa Additional case studies illustrate UHIE mapping in greater Cairo Egypt and Rome Italy to determine hot spot areas that need interventions and prioritization of UGC Highlights also include the role of blue and green infrastructures in creating livable cities in the post COVID 19 world trends of bi correlation between urban green spaces UGSs UGC and COVID 19 and global patterns of UGSs to shape better

Emmanuel,2021-09-02 This book is relevant to architects urban designers planners and policy makers concerned with enhancing climate sensitive urban form and planning It discusses building and neighborhood design layout and design features that maximize energy efficiency and thermal comfort without compromising the ability of other buildings to enjoy similar benefits the use of interstitial spaces piazzas streets and parks to improve the microclimate at the neighbourhood level design intervention case studies innovative uses of interstitial spaces to improve the local climate at the neighborhood level and urban radiative cooling solutions to mitigate the unintended climate consequences of urban growth and suggestions for ways forward      **Urban Heat Island (UHI) Mitigation** Napoleon Enteria,Matteos Santamouris,Ursula

Eicker,2020-12-14 This book discusses the concepts and technologies associated with the mitigation of urban heat islands UHIs that are applicable in hot and humid regions It presents several city case studies on how UHIs can be reduced in various areas to provide readers researchers and policymakers with insights into the concepts and technologies that should be considered when planning and constructing urban centres and buildings The rapid development of urban areas in hot and humid regions has led to an increase in urban temperatures a decrease in ventilation in buildings and a transformation of the once green outdoor environment into areas full of solar energy absorbing concrete and asphalt This situation has increased the discomfort of people living in these areas regardless of whether they occupy concrete structures This is because indoor and outdoor air quality have both suffered from urbanisation The development of urban areas has also increased energy consumption so that the occupants of buildings can enjoy indoor thermal comfort and air quality that they need via air conditioning systems This book offers solutions to the recent increase in the number of heat islands in hot and humid regions

*Modern Climatology* Pijushkanti Saha,2012-06-05 Climate study appears to be closely related to the environmental studies In a degrading environment climate conditions particularly changing situation happens to be of a great concern for sustainable future In this context the book has been written understanding the tenets of underlying principles and processes of global climate      **Climate Change** Suhaib A. Bandh,2022-03-04 Beginning in the second half of the twentieth century the impacts of climate change have been fierce causing loss of human life and irreparable destruction to natural and man made infrastructure in many parts of the world The difference between climate change now and in the past is that of sudden and disproportionate disruption of the natural energy dynamics by the changing consumption patterns of billions of human beings who have polluted terrestrial and aquatic ecosystems The picture that emerges from the exhaustive analysis of international data drawn from the most reliable sources indicates that we have possibly gained access to the gateway of extinction and it is

time that we take corrective steps immediately Global climate change is further altering our relationship with the environment modifying relatively stable climatic factors and making them uncertain unpredictable and threatening Changes in land use and an increasing demand for water resources due to climate change have affected the capacity of ecosystems to sustain food production ensure the supply of freshwater resources provide ecosystem services and promote rural multi functionality Ensuring food production does not just depend on increasing water efficiency promoting climate resilient crop production or reducing land use competition for urbanization but also on a more suitable and stable climate as the changes in climatic factors like precipitation temperature radiation evaporation and wind bring about some major shifts in global food supplies According to Special Report on Emission Scenarios SRES focused on greenhouse gas emissions projections and Representative Concentration Pathways RCPs conducted by the Intergovernmental Panel on Climate Change IPCC climate change increases the risk of simultaneous crop failures including corn rice legumes and vegetables if irrigation systems are not fully adapted to water stress situations A changing climate could have many adverse impacts on other sectors of our environment This book offers concrete up to date and appropriate study cum research material for students researchers academicians and policymakers It will be of a greater interest to students and researchers in the field of environmental science agriculture science agronomy and sustainable development *Advances in Modern and Applied Sciences* Sujay Pal, Tushar Kanti Biswas, 2022-11-10 This book *Advances in Modern and Applied Science* materializes our long cherished dream of publishing a series of volumes consisting of review papers on contemporary research fields from a broad spectrum of basic sciences The present volume which is our first baby step towards that fulfilment includes a collection of twenty five review articles contributed by about fifty researchers and scientists whose vocations are in diverse fields of science including astrophysics astronomy high energy physics space science atmospheric sciences computer sciences to material sciences
