our daily lives Chess is an activity in which we deploy almost all our available cognitive resources therefore it makes an ideal laboratory for investigation into the workings of the mind Indeed research into artificial intelligence AI has used chess as a model for intelligent behavior since the 1950s In Chess Metaphors Diego Rasskin Gutman explores fundamental questions about memory thought emotion consciousness and other cognitive processes through the game of chess using the moves of thirty two pieces over sixty four squares to map the structural and functional organization of the brain Rasskin Gutman focuses on the cognitive task of problem solving exploring it from the perspectives of both biology and AI Examining AI researchers efforts to program a computer that could beat a flesh and blood grandmaster and win a world chess championship he finds that the results fall short when compared to the truly creative nature of the human mind **Chess**
