Specifications of Letters Patent for Inventions and Provisional Specifications ,1879 The History of the French First Army Marshal de Lattre de Tassigny, 2021-11-21 This book first published in 1952 gives a detailed first hand account by its commanding officer of the French First Army from its successful landings in the South of France through its liberation of Marseilles and breakout across the Rhine and victory beyond the Danube It is a remarkable campaign overshadowed by the armies of the British and Americans in Northern Europe and detailed here with precision and passion by one of France s leading military minds **Grassland-Invertebrate Interactions: Plant Productivity, Resilience and Community Dynamics** Ivan Hiltpold, Michael Rostás, 2017-10-13 Natural and anthropogenic grasslands such as prairies meadows

rangelands and pastures cover more than 40% of the planet's surface and provide a wealth of ecological services. Grasslands alone store one third of the global carbon stocks and grass roots through their specific architectures ensure water cycling and prevent the erosion of fertile topsoil. In addition, grasslands are of vital importance for human food production as vast areas of rangelands and pastures provide feed for livestock. Pastoral legumes mobilize atmospheric nitrogen and improve fertility of arable soils. Not least, grasslands are an essential genetic resource. The three major crop species that feed half of the global population have been bred from wild grasses. Ancestors of our contemporary turf cultivars, common components of urban landscapes and recreation spaces originated from wild grasslands. Although natural and managed grasslands represent pivotal ecosystems, many aspects of how they function are poorly understood. To date, most attention has focused on grassland primary producers, i.e. forage plants and mammalian grazers, but invertebrates are likely to play an equally if not more important role in grassland ecosystem functioning. In Australian pastures, for example, the biomass of root-feeding scarab beetles can often exceed that of sheep, and plant damage caused by invertebrates is sometimes equivalent to an average dairy cow's grass consumption. Indeed, grasslands are one of the most densely populated ecosystems, with invertebrates being probably the most important engineers that shape both plant communities and the grassland as a whole. In a rapidly changing world with increasing anthropogenic pressure on grasslands, this Research Topic focuses on:

1. How grassland habitats shape invertebrate biodiversity
2. Impacts of climate change on grassland invertebrate interactions
3. Plant and invertebrate pest monitoring and management
4. Plant-mediated multitrophic interactions and biological control in grasslands
5. Land use and grassland invertebrates
6. Plant resistance to invertebrate pests

Given the increasing demand for food and land for human habitation, unprecedented threats to grasslands are anticipated. Resilient to some extent, these key ecosystems need to be better comprehended to guarantee their sustainable management and ecosystem services.

Business Groups in the West Asli M. Colpan, Takashi Hikino, 2018-02-15 This volume aims to explore the long-term evolution of different varieties of large enterprises in today's developed economies. It focuses on the economic institution of business groups and attempts to comprehend the factors behind their rise, growth, struggle, and resilience, their behavioral and organizational characteristics, and their roles in national economic development. The volume seeks to enhance the scholarly and policy-oriented understanding of business groups in developed economies by bringing together state-of-the-art research on the characteristics and contributions of large enterprises in an evolutionary perspective. While business groups are a dominant and critical organization model in contemporary emerging economies and have lately attracted much attention in academic circles, and business presses, their counterparts in developed economies have not been systematically

examined This book aims to fill this gap in the literature and is the first scholarly attempt to explore the evolutionary paths and contemporary roles of business groups in developed economies from an internationally comparative perspective In doing so it argues that business groups actually rose to function as a critical factor of industrial dynamics in the context of Second Industrial Revolution in the late nineteenth century They have adapted their characteristic roles and transformed to fit to the changing market and institutional settings As they flexibly co evolve with the environment the volume shows that business groups can remain as a viable organization model in the world s most advanced economies today New York Court of Appeals.
