of Dutch and the impact of such new varieties as Poldernederlands in Holland and Verkavelingsvlaams in Flanders Placing the Dutch story in the context of other West Germanic languages like German and English Dutch Biography of a Language is the only English language history of Dutch and will be sure to interest a global audience of students of Dutch those of Dutch descent and linguists and other scholars wishing to learn more about Dutch

Pragmemes and Theories of Language Use Keith Allan, Alessandro Capone, Istvan Kecskes, 2017-01-10 This volume offers recent developments in pragmatics and adjacent territories of investigation including important new concepts such as the pragmatic act and the pragme and combines developments in neighboring disciplines in an integrative holistic pragmatic approach The young science of pragmatics has from its inception differentiated itself from neighboring fields in the humanities especially the disciplines dealing with language and those focusing on the social and anthropological aspects of human behavior by focusing on the language user in his or her societal environment This collection of papers continues that emphasis on language use and pragmatic acts in their context The editors and contributors share a perspective that essentially considers language as a system for communication and wants to look at language from a societal perspective and accept the view that acts of interpretation are essentially embedded in culture In an interdisciplinary approach some authors explore connections with social theory in particular sociology or socio linguistics some offer a political stance critical discourse analysis others explore connections with philosophy and philosophy of language and several papers address problems in theoretical pragmatics

Dimensions of Diffusion and Diversity Janice Fon, 2019-01-14 Variation is the norm in language It is the universal trait that has never been embarrassed by counterexamples As language is a joint product of human cognition and human society the dimensions underlying language variation could potentially reveal the complexity of the human mind and defines us of what we are as cognitive and social beings be it Austrians speaking German or Nepalis speaking Dumi This volume includes eight papers highlighting three dimensions underlying language variation The linguistic dimension explores how language changes across the physical time span and across linguistic breadth The cognitive dimension examines how the human mind handles experiential frequency and life experiences and how it copes with suboptimal processing faculties Finally the contextual dimension focuses on how language interacts with its ambiance either in the form of geographical surroundings or in the form of artistic styles The uniqueness of this volume lies not only in its wide range of dimensions investigated but also in its broad spectrum of languages covered This enables us to form a fuller understanding of how language evolves and interacts with human cognition

Perspectives on Variation Nicole Delbecq, Johan van der Auwera, Dirk Geeraerts, 2011-06-24 The significant advances witnessed over the last years in the broad field of linguistic variation testify to a growing convergence between sociolinguistic approaches and the somewhat older historical and comparative research traditions Particularly within cognitive and functional linguistics the evolution towards a maximally dynamic approach to language goes hand in hand with a renewed interest in corpus research and quantitative methods of analysis Many

researchers feel that only in this way one can do justice to the complex interaction of forces and factors involved in linguistic variability both synchronically and diachronically. The contributions to the present volume illustrate the ongoing evolution of the field. By bringing together a series of analyses that rely on extensive corpuses to shed light on sociolinguistic historical and comparative forms of variation, the volume highlights the interaction between these subfields. Most of the contributions go back to talks presented at the meeting of the *Societas Linguistica Europaea* held in Leuven in 2001. The volume starts with a global typological view on the sociolinguistic landscape of Europe offered by Peter Auer. It is followed by a methodological proposal for measuring phonetic similarity between dialects designed by Paul Heggarty. April McMahon and Robert McMahon. Various papers deal with specific phenomena of socially and conceptually driven variation within a single language. For Dutch, Jos Tummers, Dirk Speelman and Dirk Geeraerts analyze inflectional variation in Belgian and Netherlandic Dutch. Reinhild Vandekerckhove focuses on interdialectal convergence between West Flemish urban dialects and Arjan van Leuvensteijn studies competing forms of address in the 17th century Dutch standard variety. The cultural and conceptual dimension is also present in the diachronic lexicosemantic explorations presented by Heli Tissari. Clara Molina and Caroline Gevaert for English expressions referring to the experiential domains of love, sorrow and anger respectively, the history of words is systematically linked up with the images they convey and the evolving conceptualizations they reveal. The papers by Heide Wegener and by Marcin Kilarski and Grzegorz Krynicki constitute a plea against arbitrariness of alternations at the level of nominal morphology dealing with marked plural forms in German and with gender assignment to English loanwords in the Scandinavian languages respectively. Their distributional accounts bring into the picture a variety of motivating factors. The four cross linguistic studies that close the volume focus on the differing ways in which even closely related languages exploit parallel morphosyntactic patterns. They share the same methodological concern for combining rigorous parametrization and quantification with conceptual and discourse functional explanations. While Griet Beheydt and Katleen Van den Steen confront the use of formally defined competing constructions in two Germanic and two Romance languages respectively, Torsten Leuschner as well as Gisela Harras and Kirsten Proost analyze how a particular speaker's attitude is expressed differently in various Germanic languages.
