Free Boundary Problems J I Diaz, Juan Luis Vazquez, M A Herrero, Amable Linan, 1995-04-04 This research note consists of selected contributions from the 1993 International Conference on Free Boundary Problems Theory and Applications These represent coherent and high level research in the field of free boundary problems Topics include mean curvature flows phase transitions and material sciences fluid mechanics and combustion problems

Free Boundary Problems Involving Solids J M Chadam, Helen Rasmussen, 1993-02-22 This is the second of three volumes containing the proceedings of the International Colloquium Free Boundary Problems Theory and Applications held in Montreal from June 13 to June 22 1990 The main theme of this volume is the concept of free boundary problems associated with solids The first free boundary problem the freezing of water the Stefan problem is the prototype of solidification problems which form the main part of this volume The two sections treating this subject cover a large variety of topics and procedures ranging from a theoretical mathematical treatment of solvability to numerical procedures for practical problems Some new and interesting problems in solid mechanics are discussed in the first section while in the last section the important new subject of solid solid phase transition is examined

Emerging Applications in Free Boundary Problems J M Chadam, 2020-12-22 This Research Note presents a collection of papers on emerging applications in free boundary problems The subjects covered include microgravity chemical and biological reactions and electromagnetism and electronics

Mathematical Topics in Fluid Mechanics Jose Francisco Rodrigues, Adelia Sequeira, 2020-10-02 This Research Note presents several contributions and mathematical studies in fluid mechanics namely in non Newtonian and viscoelastic fluids and on the Navier Stokes equations in unbounded domains It includes review of the mathematical analysis of incompressible and compressible flows and results in magnetohydrodynamic and electrohydrodynamic stability and thermoconvective flow of Boussinesq Stefan type These studies along with brief communications on a variety of related topics comprise the proceedings of a summer course held in Lisbon Portugal in 1991 Together they provide a set of comprehensive survey and advanced introduction to problems in fluid mechanics and partial differential equations

Extending Modules Nguyen Viet Dung, 2019-01-22 Module theory is an

important tool for many different branches of mathematics as well as being an interesting subject in its own right Within module theory the concept of injective modules is particularly important Extending modules form a natural class of modules which is more general than the class of injective modules but retains many of its

Random Geometrically Graph Directed Self-Similar Multifractals Lars Olsen,2017-07-12 Multifractal theory was introduced by theoretical physicists in 1986 Since then multifractals have increasingly been studied by mathematicians This new work presents the latest research on random results on random multifractals and the physical thermodynamical interpretation of these results As the amount of work in this area increases Lars Olsen presents a unifying approach to current multifractal theory Featuring high quality original research material this important new book fills a gap in the current literature available providing a rigorous mathematical treatment of multifractal measures

Common Zeros of Polynomials in Several Variables and Higher Dimensional Quadrature Yuan Xu,1994-10-10 Presents a systematic study of the common zeros of polynomials in several variables which are related to higher dimensional quadrature The author uses a new approach which is based on the recent development of orthogonal polynomials in several variables and differs significantly from the previous ones based on algebraic ideal theory Featuring a great deal of new work new theorems and in many cases new proofs this self contained work will be of great interest to researchers in numerical analysis the theory of orthogonal polynomials and related subjects

Complex Analysis and Its Applications C.C. Yang,Guo-Chun Wen,K Y Li,Y M Chiang,1994-04-05 This volume presents a collection of contributions to an international conference on complex analysis and its applications held at the newly founded Hong Kong University of Science and Technology in January 1993 The aim of the conference was to advance the theoretical aspects of complex analysis and to explore the application of its techniques to physical and engineering problems Three main areas were emphasised Value distribution theory Complex dynamical system and geometric function theory and the Application of complex analysis to differential equations and physical engineering problems

Nonlinear Partial Differential Equations and Their Applications Doina Cioranescu,Jacques-Louis Lions,1998-08-15 This book presents the texts of selected lectures on recent work in the field of nonlinear partial differential equations delivered by leading international experts at the well established weekly seminar held at the Coll ge de France Emphasis is on applications to numerous areas including control theory theoretical physics fluid and continuum mechanics free boundary problems dynamical systems scientific computing numerical analysis and engineering Proceedings of this seminar will be of particular interest to postgraduate students and specialists in the area of nonlinear partial differential equations

Functional Analysis with Current Applications in Science, Technology and Industry Martin Brokate,Abul Hasan Siddiqi,1997-12-08 This volume constitutes the proceedings of a conference on functional analysis and its applications which took place in India during December 1996 Topics include topological vector spaces Banach algebras meromorphic functions partial differential equations variational equations and inequalities optimization wavelets elastoplasticity numerical

integration fractal image compression reservoir simulation forest management and industrial maths Integral Transforms, Reproducing Kernels and Their Applications Saburo Saitoh, 2020-11-26 The general theories contained in the text will give rise to new ideas and methods for the natural inversion formulas for general linear mappings in the framework of Hilbert spaces containing the natural solutions for Fredholm integral equations of the first kind **Numerical Analysis 1993** D.F. Griffiths, G.A. Watson, 2020-10-07 This volume contains invited papers presented at the 15th Dundee Biennial Conference on Numerical Analysis held at the University of Dundee in June of 1993 The Dundee Conferences are important events in the numerical analysis calendar and the papers published here represent accounts of recent research work by leading numerical analysts covering a wide range of fields of interest The book is a valuable guide to the direction of current research in many areas of numerical analysis It will be of particular interest to graduate students and research workers concerned with the theory and application of numerical methods for solving ordinary and partial differential equations **Quantum Mechanics** D. A. Dubin, Mark A. Hennings, 1990-08-20 These notes present a rigorous mathematical formulation of quantum mechanics based on the algebraic framework of observables and states The underlying mathematics is that of topological algebras locally convex spaces and distribution theory Harmonic Maps Into Homogeneous Spaces Malcolm Black, 2018-05-04 Harmonic maps and the related theory of minimal surfaces are variational problems of long standing in differential geometry Many important advances have been made in understanding harmonic maps of Riemann surfaces into symmetric spaces In particular twistor methods construct some and in certain cases all such mappings from holomorphic data These notes develop techniques applicable to more general homogeneous manifolds in particular a very general twistor result is proved When applied to flag manifolds this wider viewpoint allows many of the previously unrelated twistor results for symmetric spaces to be brought into a unified framework These methods also enable a classification of harmonic maps into full flag manifolds to be established and new examples are constructed The techniques used are mostly a blend of the theory of compact Lie groups and complex differential geometry This book should be of interest to mathematicians with experience in differential geometry and to theoretical physicists **Nonlinear Partial Differential Equations** A Benkirane, J P Gossez, 1996-04-11 This book presents a collection of selected contributions on recent results in nonlinear partial differential equations from participants to an international conference held in Fes Morocco in 1994 The emphasis is on nonlinear elliptic boundary value problems but there are also papers devoted to related areas such as monotone operator theory calculus of variations Hamiltonian systems and periodic solutions Some of the papers are exhaustive surveys while others contain new results published here for the first time This book will be of particular interest to graduate or postgraduate students as well as to specialists in these areas *A Method for Computing Unsteady Flows in Porous Media* R Raghavan, 2017-11-22 Self contained and concise this Research Note provides a basis to study unsteady flow in saturated porous media It provides for the development of algorithms that examine three dimensional flows subject to complicated boundary conditions that are a

natural consequence of flow in geological systems A new way to understand the flow in porous media is presented The authors pay attention to computational considerations and options for developing codes are addressed The note consists of five chapters the first is introductory the second and third are devoted to showing how one arrives at the solutions of interest the fourth chapter presents various reformulations to aid computations and presents a few illustrative examples the fifth chapter is a natural progression of the first four chapters to more complicated visualizations of flow in porous media
