Global Hydrology:

Global Hydrology J. A. A. Jones, 2014-06-03 Global Hydrology illustrates in detail the growing importance of understanding hydrological processes and pathways as a means of effective and safe management of water resources It describes current management practices and past environmental impact It analyses the options for improving water supply and protecting the environment emphasizing the need for international collaboration in a changing societal and environmental context Hydrology 2020 International Association of Hydrological Sciences. Hydrology 2020 Working Group, 2006 A milestone capturing the state of the art in hydrological science at the beginning of the 21st century a chart for hydrologists exploring the new frontiers in hydrology and a guide for those involved with developing and implementing water policies It considers the capability that hydrological sciences will and should have by 2020 and what needs doing now in order to achieve this There is an emphasis on societal issues and interdisciplinary work pertinent to hydrology as hydrologists cannot work in isolation from society **Global Hydrology** Gennadii Pavlovich Kalinin, 1971 **Hydrology and Global Environmental Change** Nigel W. Arnell, 2014-10-13 Hydrology and Global Environmental Change presents the hydrological contribution to and consequences of global environmental change Assuming little or no prior knowledge on the part of the reader the book looks at the main processes of global environmental change global scale processes large regional processes repetitive processes and how the hydrological cycle processes and regimes impact on GEC and vice versa

Gupta, John C. Rodda, 2013-06-29 General circulation models GCMs

predict certain changes in the amounts and distribution of precipitation but the conversion of these predictions of impacts on water resources presents novel problems in hydrologic modeling particularly with regard to the scale of the processes involved Therefore improved distributed GCMs are required New remote sensing technologies provide the necessary spatially distributed data However there are many attendant problems with the translation of remotely sensed signals into hydrologically relevant information This book elucidates how to improve the representation of land surface hydrologic processes in GCMs and in regional and global scale climate studies It is divided into five sections Models and Data Precipitation Soil Moisture Evapotranspiration Runoff

Remote Sensing and Water Resources A. Cazenave, N. Champollion, J. Benveniste, J. Chen, 2016-05-04 This book is a collection of overview articles showing how space based observations combined with hydrological modeling have considerably improved our knowledge of the continental water cycle and its sensitivity to climate change Two main issues are highlighted 1 the use in combination of space observations for monitoring water storage changes in river basins worldwide and 2 the use of space data in hydrological modeling either through data assimilation or as external constraints The water resources aspect is also addressed as well as the impacts of direct anthropogenic forcing on land hydrology e g ground water depletion dam building on rivers crop irrigation changes in land use and agricultural practices etc Remote sensing observations offer important new information on this important topic as well which is highly useful for achieving water management objectives Over the past 15 years remote sensing techniques have increasingly demonstrated their capability to monitor components of the water balance of large river basins on time scales ranging from months to decades satellite altimetry routinely monitors water level changes in large rivers lakes and floodplains When combined with satellite imagery this technique can also measure surface water volume variations Passive and active microwave sensors offer important information on soil moisture e g the SMOS mission as well as wetlands and snowpack The GRACE space gravity mission offers for the first time the possibility of directly measuring spatio temporal variations in the total vertically integrated terrestrial water storage When combined with other space observations e g from satellite altimetry

and SMOS or model estimates of surface waters and soil moisture space gravity data can effectively measure groundwater storage variations New satellite missions planned for the coming years will complement the constellation of satellites monitoring waters on land This is particularly the case for the SWOT mission which is expected to revolutionize land surface hydrology Previously published in *Surveys in Geophysics* Volume 37 No 2 2016

What Is Water? Jamie Linton,2010-07-01 We all know what water is and we often take it for granted But the spectre of a worldwide water crisis suggests that there might be something fundamentally wrong with the way we think about water Jamie Linton dives into the history of water as an abstract concept stripped of its environmental social and cultural contexts Reduced to a scientific abstraction to mere H₂O this concept has given modern society licence to dam divert and manipulate water with apparent impunity Part of the solution to the water crisis involves reinvesting water with social content thus altering the way we see water An original take on a deceptively complex issue What Is Water offers a fresh approach to a fundamental problem
