Evolution of Marine Coastal Ecosystems under the Pressure of Global Changes

Hubert-Jean Ceccaldi, Yves Hénocque, Teruhisa Komatsu, Patrick Prouzet, Benoit Sautour, Jiro Yoshida, 2020-06-15 Coastal and estuarine environments at the interface of terrestrial and marine areas are among the most productive in the world. However, since the beginning of the industrial era, these ecosystems have been subjected to strong anthropogenic pressures intensified from the second half of the 20th century when there was a marked acceleration in the warming climate change of the continents, particularly at high latitudes. Coastal ecosystems are highly vulnerable to alteration of their physical, chemical, and biological characteristics: marine intrusion, acidification of marine environments, changes in ecosystems, evolution, and artificialization of the coastline, etc. In contact with heavily populated areas, these environments are often the receptacle of a lot of chemical and biological pollution sources that significantly diminish their resilience. In this context of accelerated evolution and degradation of these areas, important for food security of many populations around the world, it is necessary to better identify the factors of pressure and understand, at different scales of observation, their effects and impacts on the biodiversity and on the socio-eco systems in order to determine the degree of vulnerability of these coastal ecosystems and the risks they face. A transdisciplinary and integrated approach is required to prevent risks. Within this framework, operational coastal oceanography occupies an important place, but also the implementation of a true socio-eco system approach in order to set up an environmentally friendly development.

Global Fisheries B. J. Rothschild,2012-12-06 This series is dedicated to serving the growing community of scholars and practitioners concerned with the principles and applications of environmental management Each volume is a thorough treatment of a specific topic of importance for proper management practices A fundamental objective of these books is to help the reader discern and implement man's stewardship of our environment and

the world's renewable resources. For we must strive to understand the relationship between man and nature, act to bring harmony to it, and nurture an environment that is both stable and productive. These objectives have often eluded us because the pursuit of other individual and societal goals has diverted us from a course of living in balance with the environment. At times, therefore, the environmental manager may have to exert restrictive control, which is usually best applied to man, not nature. Attempts to alter or harness nature have often failed or backfired, as exemplified by the results of imprudent use of herbicides, fertilizers, water, and other agents. Each book in this series will shed light on the fundamental and applied aspects of environmental management. It is hoped that each will help solve a practical and serious environmental problem.

Inequality, Geography and Global Value Chains Jong Min Lee, J. Eduardo Ibarra-Olivo, Katuscia Lavoratori, Liang (Arthur) Li, 2023-04-24. This contributed volume provides theoretical and empirical insights into a variety of contemporary issues about inequality, geography, and global value chains in today's world, where global disruptions are prevalent, globalization is being transformed, and multinational enterprises (MNEs) are under pressure to promote sustainability. Many challenges and tensions created by growing inequality within and between countries, cities, and individuals, coupled with recent disruptions in the global economy, beg important questions regarding the role of MNEs. A valuable resource for scholars and students in international business, the book provides a richer understanding of how MNE activities are being affected by the complex dynamics of the modern global business environment and discusses what strategies they need to implement in order to adapt to a changing world while accounting for the interests of a broader range of stakeholders.

Global Value Chains and Production Networks Fengru Cui, Guitang Liu, 2018-12-05. Global Value Chains and Production Networks: Case Studies of Siemens and Huawei presents theories and frameworks that facilitate the evolution of GPN studies from macro perspectives based on territory and industry to the use of micro-firm level data. The book explores these theories and frameworks through detailed case studies of two major corporations, Siemens and Huawei. With the GPN/GVC structure of Chinese firms not well known outside China, despite the growing importance of Chinese firms in the global economy, this guide plays a pivotal role in facilitating the use of data that promise to unlock economic cooperation and value. Emphasizes micro-data analytical models and their methodological underpinnings. Illustrates how these data illuminate the economic structures of two comparable GPNs within highly divergent institutional contexts. Suggests how companies can cooperate with foreign partners to enhance their global management capacity and reshape their advantages in international competition.
