Rationality Riccardo Viale, 2020-12-02 Herbert Simon's renowned theory of bounded rationality is principally interested in cognitive constraints and environmental factors and influences which prevent people from thinking or behaving according to formal rationality. Simon's theory has been expanded in numerous directions and taken up by various disciplines with an interest in how humans think and behave. This includes philosophy, psychology, neurocognitive sciences, economics, political science, sociology, management, and organization studies. The Routledge Handbook of Bounded Rationality draws together an international team of leading experts to survey the recent literature and the latest developments in these related fields. The chapters feature entries on key behavioural phenomena including reasoning, judgement, decision making, uncertainty, risk, heuristics, and biases, and fast and frugal heuristics. The text also examines current ideas such as fast and slow thinking, nudge, ecological rationality, evolutionary psychology, embodied cognition, and neurophilosophy. Overall, the volume serves to provide the most complete state of the art collection on bounded rationality available. This book is essential reading for students and scholars of economics, psychology, neurocognitive sciences, political sciences, and philosophy. Theory, Policy and Dynamics in International Trade Wilfred J. Ethier, Wilfred Ethier, Elhanan Helpman, J. Peter Neary, 1993. This book presents a representative collection of papers on international trade, one of the most dynamic sub-fields in economics. The contributions range over all the major areas of research, including articles on the geographical aspects of international trade by Paul Krugman and Alan Deardorff, on dynamic stochastic economies by Avinash Dixit, and on endogenous growth by Gene Grossman and Elhanan Helpman. In addition to the theoretical contributions, the book also contains work on important policy issues such as auction quotas discussed by Kala Krishna, and the role of government in economic development by Anne Krueger. Also included is an assessment by Bill Ethier of the theoretical achievements of a leading authority in international trade theory, Ronald Jones, in whose honour the essays were written. IMF Staff papers International Monetary Fund, Research Dept., 1995-01-01. This paper provides a critical survey of the literature on politico-institutional determinants of the government budget. We organize our discussion around two questions: Why did certain OECD countries but not others accumulate large public debts? Why did these fiscal imbalances appear in the last twenty years rather than sooner? We begin by discussing the tax smoothing model and conclude that this approach alone cannot provide complete answers to these questions. We then proceed to a discussion of political economy models which we organize into six groups: 1. models based upon opportunistic policy makers and naive voters with fiscal illusion; 2. models of intergenerational redistributions; 3. models of debt as a strategic variable linking the current government with the next one; 4. models of coalition governments; 5. models of geographically dispersed interests; and 6. models emphasizing the effects of budgetary institutions. We conclude by briefly discussing policy implications. *Who's who in Economics* Mark Blaug, 1986.
