Global Energy Perspectives:

Global Energy Perspectives Nebojsa Nakicenovic, Arnulf Grubler, Alan McDonald, 1998-10-15 Global energy needs are expanding substantially as populations grow and economies develop around the world There is clear evidence that continued use of fossil fuels as the world's dominant energy supply is damaging the environment and causing changes in global climate patterns People want higher levels of more efficient cleaner and less obtrusive energy services How much of those needs will be met by fossil fuels how much by alternative fuels and how much by efficiency increases and expanded energy conservation is a wide open question Global Energy Perspectives describes the results of a five year joint study by the International Institute for Applied systems Analysis and the World Energy Council It presents six long term energy futures which lay out the alternatives among future fuels technologies efficiency gains conservation patterns and pollution levels and pinpoints the key choices that are most likely to characterize the twenty first century The primary audience will include researchers educators policy makers in private and public sectors and other workers in the energy technology economics and environmental areas but the book will appeal to anyone interested in the future of energy production as a prerequisite for human development Global Energy Perspectives 2000-2020, 1989 **Global Energy Perspectives to 2050 and Beyond**, 1995

The Powers That Be Scott L. Montgomery, 2010-07-15 Thirty years ago our global energy landscape did not look

remarkably different from what it does today Three or four decades from now it certainly will dwindle oil reserves will clash with skyrocketing demand as developing nations around the world lead their citizens into the modern energy economy and all the while the grave threat of catastrophic climate change looms ever larger Energy worries are at an all time high just how will we power our future With *The Powers That Be* Scott L Montgomery cuts through the hype alarmism and confusion to give us a straightforward informed account of where we are now and a map of where we're going Starting with the inescapable fact of our current dependence on fossil fuels which supply 80% of all our energy needs today Montgomery clearly and carefully lays out the many alternative energy options available ranging from the familiar like water and solar to such nascent but promising sources as hydrogen and geothermal power What is crucial Montgomery explains is understanding that our future will depend not on some single wondrous breakthrough instead we should focus on developing a more diverse adaptable energy future one that draws on a variety of sources and is thus less vulnerable to disruption or failure An admirably evenhanded and always realistic guide Montgomery enables readers to understand the implications of energy funding research and politics at a global scale At the same time he doesn't neglect the ultimate connection between those decisions and the average citizen flipping a light switch or sliding behind the wheel of a car making *The Powers That Be* indispensable for our ever more energy conscious age *All in!* Franz Josef Prof. Dr. Dr. h.c. Radermacher, Bert Beyers, 2024-12-10 Today more than 80 percent of global energy comes from coal gas and oil A completely renewable and electric energy system All Electric is a distant dream perhaps not even that Time is of the essence That is why we need to use all climate neutral and secure energy sources immediately Renewable fossil with CO2 capture and nuclear energy ALL IN instead of All Electric Because fossil emissions are the problem not fossil fuels Climate neutrality can only be achieved pragmatically open to technology and together in a symbiosis of technology and nature Whether we get climate change under control will not be decided in Germany or Europe not even in the USA but in China India and Africa At best climate nationalism helps our own conscience *Pandora's Toolbox* Wake Smith, 2022-03-24 Net zero emissions is only the beginning Smith explains the need for carbon dioxide removal and even solar radiation management to preserve our societies and ecosystems **Financing Global Energy Perspectives to 2050** Nebojša Nakićenović, Hans-Holger Rogner, 1996
