Global History Of Philosophy The Period Of Scholasticism Part 2:

Global History of Philosophy C. Plott, 2000-12-01 The fourth and fifth volumes of the Global History of Philosophy are designated The Period of Scholasticism part one 800 1150 part two 1150 1350 in order to stress that the scholastic method with its emphasis on thesis antithesis and attempts at synthesis became universal throughout Eurasia Scholasticism should not be taken in the pejorative sense as the juggling of arguments by straw men but in the sense of a challenge even in our own era to work for consistent and comprehensive systematic synthesis All the older traditions need to be reinterpreted in terms of modern conditions which after all is what the Eurasian scholastics of these centuries were doing for their own time The major developments of this period are Monism in Many Moods during the ninth century through Exfoliation and Elaboration of those seminal systems in the tenth and eleventh centuries until the time of the Great Summas in the twelfth and thirteenth centuries It was during this time that philosophy and theology developed a very highly sophisticated technique of balancing arguments and refutations and counter arguments and counter refutations Most of these architectonic structurings were in the form of commentaries on basic handbook texts handed down as authoritative scripture In every culture of Eurasia systematic philosophy as well as intuitive wisdom had reached a high degree of sophistication from which it might be said that it has never quite completely recovered In terms of method seldom since has there been such thoroughness in treatment of every single topic with arguments and counter arguments architectonically juxtaposed and counter balanced into such a grand harmony As is true of the whole series these volumes are a new way of exploring the accumulative wisdom of mankind and in the process explode many of the ethnocentric stereotypes which still hinder intercultural communications and world peace through intercultural understanding **Global History of Philosophy** John C. makes it possible to discern a close connection between scholasticism and contemporary imaginative literature She shows how encyclopedists employed the same practices of figuration narrative and citation as poets and romanciers while much of the difficulty of the imaginative writing of this period derives from a juxtaposition of heterogeneous discourses inspired by encyclopedias With rich and innovative readings of texts both familiar and neglected Reading the World reveals how the study of encyclopedism can illuminate both the intellectual work and the imaginative writing of the scholastic age

Language as a Scientific Tool Miles MacLeod,Rocío G. Sumillera,Jan Surman,Ekaterina Smirnova,2016-01-29

Language is the most essential medium of scientific activity Many historians sociologists and science studies scholars have investigated scientific language for this reason but only few have examined those cases where language itself has become an object of scientific discussion Over the centuries scientists have sought to control refine and engineer language for various epistemological communicative and nationalistic purposes This book seeks to explore cases in the history of science in which questions or concerns with language have bubbled to the surface in scientific discourse This opens a window into the particular ways in which scientists have conceived of and construed language as the central medium of their activity across different cultural contexts and places and the clashes and tensions that have manifested their many attempts to engineer it to both preserve and enrich its function The subject of language draws out many topics that have mostly been neglected in the history of science such as the connection between the emergence of national languages and the development of science within national settings and allows us to connect together historical episodes from many understudied cultural and linguistic venues such as Eastern European and medieval Hebrew science
