Asks whether and to what effect the widespread adoption of digital technology has led to large scale or structural economic changes in business **Corporate Governance** Bob Tricker,2025 *Circular economy in action: Regional adaptation of global strategies. The case of Georgia* Leila Abdullina,2025-04-02 Represents a significant contribution to understanding the challenges faced by countries with different levels of economic development in their efforts to implement circular economy principles The book evaluates key aspects of the transition from a linear to a circular model examining the role of innovation and technology Special attention is given to practical guidance and the simulation of economic adaptation methods demonstrated through the case of Georgia *Decolonization in St. Lucia* Tennyson S. D. Joseph,2011-08-16 Tennyson S D Joseph builds upon current research on the anticolonial and nationalist experience in the Caribbean He explores the impact of global transformation upon the independent experience of St Lucia and argues that the island s formal decolonization roughly coincided with the period of the rise of global neoliberalism hegemony Consequently the concept of limited sovereignty became the defining feature of St Lucia s understanding of the possibilities of independence Central to the analysis is the tension between the role of the state as a facilitator of domestic aspirations on one hand and a facilitator of global capital on the other Joseph examines six critical phases in the St Lucian experience The first is 1940 to 1970 when the early nationalist movement gradually occupied state power within a framework of limited self government The second period is 1970 to 1982 during which formal independence was attained and an attempt at socialist oriented radical nationalism was pursued by the St Lucia Labor Party The third distinctive period was the period of neoliberal hegemony 1982 1990 The fourth period 1990 1997 witnessed a heightened process of neoliberal adjustment in global trade which destroyed the banana industry and transformed the domestic political economy A later period 1997 2006 involved the SLP s return to political power resulting in tensions between an earlier radicalism and a new and contradictory accommodation to global neoliberalism The final period 2006 2010 coincides with the onset of a crisis in global neoliberalism during which a series of domestic conflicts reflected the contradictions of the dominant understanding of sovereignty in narrow materialist terms at the expense of its wider anti systematic progressive and emancipator connotations **Proceedings of the Forty-eighth Pugwash Conference on Science and World Affairs, Jurica, Mexico, 29 September-4 October 1998** Joseph Rotblat,2001 In this book scientists who are pre eminent in their fields focus on the crucial role of science in the transition away from a culture of war towards the construction of peace based on a capacity to anticipate and prevent destructive conflicts The subject matter wide ranging and of great concern to people everywhere includes the progress and prospects for a nuclear weapon free world non nuclear threats to peace and security the building of legitimate world institutions conflict resolution and the construction of peace the local and global environmental dimensions of peace the health hazards of nuclear chemical and biological weapons and the interactions between health problems and poverty Contents Chiapas Politics or War R Benitez Manaut Nuclear Disarmament Is This as Good as It Gets M M Bosch The Future of Nuclear

S&T Strategies of Six Countries National Research Council, Division on Engineering and Physical Sciences, Standing Committee on Technology Insightâ" Gauge, Evaluate, and Review, Committee on Global Science and Technology Strategies and Their Effect on U.S. National Security, 2010-10-04 An increase in global access to goods and knowledge is transforming world class science and technology S T by bringing it within the capability of an unprecedented number of global parties who must compete for resources markets and talent In particular globalization has facilitated the success of formal S T plans in many developing countries where traditional limitations can now be overcome through the accumulation and global trade of a wide variety of goods skills and knowledge As a result centers for technological research and development R D are now globally dispersed setting the stage for greater uncertainty in the political economic and security arenas These changes will have a potentially enormous impact for the U S national security policy which for the past half century was premised on U S economic and technological dominance As the U S monopoly on talent and innovation wanes arms export regulations and restrictions on visas for foreign S T workers are becoming less useful as security strategies The acute level of S T competition among leading countries in the world today suggests that countries that fail to exploit new technologies or that lose the capability for proprietary use of their own new technologies will find their existing industries uncompetitive or obsolete The increased access to information has transformed the 1950s paradigm of control and isolation of information for innovation control into the current one of engagement and partnerships between innovators for innovation creation Current and future strategies for S T development need to be considered in light of these new realities This book analyzes the S T strategies of Japan Brazil Russia India China and Singapore JBRICS six countries that have either undergone or are undergoing remarkable growth in their S T capabilities for the purpose of identifying unique national features and how they are utilized in the evolving global S T environment *The Blue Planet* Michael D. Bayer, 2010 Mike Bayer s book *The Blue Planet*

Informal International Police Networks and National Intelligence makes a powerful argument for why the United States needs to make better use of its federal law enforcement agencies abroad as an integral part of our national counterterrorism strategy Bayer's book criticizes the primacy of the military intelligence model in our foreign counterintelligence strategy arguing that the counterterrorism role reserved for the FBI makes insufficient use of the global networking capabilities of our many other American law enforcement agencies abroad Bayer's book makes an important contribution to the literature on international governmental networks such as the work of Anne Marie Slaughter and Kal Raustiala describing the unique ability that informal networks of cooperating law enforcement agencies have to collect information about local conditions and local communities that may prove crucial in identifying terrorist threats and preventing terrorist attacks Bayer argues that such networks have proven immensely successful in investigating organized crime but that these capabilities have been underused against international terrorist networks By virtue of their omnipresence around the globe police are natural anticipatory collectors of vast amounts of information They are for that reason well placed to detect suspicious activities particularly given the overlap between terrorist cells and criminal networks Law enforcement personnel have a unique ability to draw on trust and a common culture with their counterparts in other countries resulting in a regular informal interchange of useful information Building on the work of Mathieu Deflem Bayer recognizes the particular advantage that the police enjoy by virtue of their professional autonomy and relative independence from the centers of political decision making Quoted From Defense Technical Information Center citation to the book on the Internet
