Societal and medical responses to the problem are far from optimal, but the appearance of new technologies offers room for improvement, and lots of new initiatives have been launched and developed. In this Special Issue, we will describe and discuss how these new tools are helping to improve the assessment and treatment of substance use disorders. We will cover a wide variety of novelties that are being applied to addiction: e-health, APPs, digital phenotyping, ecological momentary assessment, and interventions. Wearable technology, computer-assisted tests, transcranial magnetic stimulation, and virtual reality are just some examples of developments in a field that promises to create a real revolution in the assessment and treatment of addictions. **The Global Methamphetamine Problem: Approaches to Elucidate the Neurobiology, Epidemiology and Therapeutic Effectiveness** Maximilian Pilhatsch, Christian Beste, Milky Kohno, 2020-10-12.
