National Library of Medicine Current Catalog National Library of Medicine (U.S.),1982 *Food Additives, Second Edition Revised And Expanded* , *Reducing Salt in Foods* David Kilcast,Fiona Angus,2007-02-14 Concerns have grown that consumption levels of salt are well above those needed for nutritional purposes and that this can lead to adverse effects on health in particular cardiovascular disease Consumers are increasingly looking to reduce their salt intake making salt reduction a priority for food manufacturers This is not straightforward though as salt plays an important role in food preservation taste and processability Written by a team of international experts Reducing salt in foods provides a unique review of current knowledge in this field This book is divided into three parts and discusses the major issues concerned with salt reduction and how it may be achieved Part one reviews the key health issues driving efforts to reduce salt government action regarding salt reduction and the implications of salt labelling Consumer perception of salt and views on salt reduction and are also discussed The second part focuses on the technological microbiological and sensory functions of salt and strategies that can be taken to reduce salt The final part of the book outlines strategies which have been taken to reduce salt in particular food groups meat and poultry seafood bread snack foods dairy products and canned foods Reducing salt in foods is an essential reference for health professionals governments and food manufacturers Discusses methods to reduce salt while maintaining food sensory quality shelf life and processability Provides a unique review of current knowledge in this field An essential reference for health professionals governments and food manufacturers **Adverse Effects of Foods** E. F. Jelliffe,2012-12-06 **Emotion and Decision Making Explained** Edmund T. Rolls,2014 What produces emotions Why do we have emotions How do we have emotions Why do emotional states feel like something What is the relation between emotion and reward value and subjective feelings of pleasure These are just some of the question considered in this book written by a leading neuroscientist in this field Dietary Reference Intakes for Energy, Carbohydrate, Fiber, Fat, Fatty Acids, Cholesterol, Protein, and Amino Acids Institute of Medicine,Food and Nutrition Board,Standing Committee on the Scientific Evaluation of Dietary Reference Intakes,Subcommittee on Interpretation and Uses of Dietary Reference Intakes,Subcommittee on Upper Reference Levels of Nutrients,Panel on the Definition of Dietary Fiber,Panel on Macronutrients,2005-11-28 Responding to the expansion of scientific knowledge about the roles of nutrients in human health the Institute of Medicine has developed a new approach to establish Recommended Dietary Allowances RDAs and other nutrient reference values The new title for these values Dietary Reference Intakes DRIs is the inclusive name being given to this new approach These are quantitative estimates of nutrient intakes applicable to healthy individuals in the United States and Canada This new book is part of a series of books presenting dietary reference values for the intakes of nutrients It

establishes recommendations for energy carbohydrate fiber fat fatty acids cholesterol protein and amino acids This book presents new approaches and findings which include the following The establishment of Estimated Energy Requirements at four levels of energy expenditure Recommendations for levels of physical activity to decrease risk of chronic disease The establishment of RDAs for dietary carbohydrate and protein The development of the definitions of Dietary Fiber Functional Fiber and Total Fiber The establishment of Adequate Intakes AI for Total Fiber The establishment of AIs for linolenic and a linolenic acids Acceptable Macronutrient Distribution Ranges as a percent of energy intake for fat carbohydrate linolenic and a linolenic acids and protein Research recommendations for information needed to advance understanding of macronutrient requirements and the adverse effects associated with intake of higher amounts Also detailed are recommendations for both physical activity and energy expenditure to maintain health and decrease the risk of disease

Regulatory Mechanisms of Synaptic Transmission R. Tapia, 2012-12-06 This book which originated in the presentations of a symposium sponsored by the Universidad Nacional Autonoma de Mexico held in Mexico City on April 14 16 1980 represents an attempt to analyze some of the most relevant aspects of synaptic transmission This topic was chosen on the strong belief that the progress of the neurosciences depends to a great extent on the understanding of the basic mechanisms of synaptic function Rather than selecting only a specific approach or speciality the book intends to cover this field in a multi disciplinary way This means that neurochemical neurophysiological and morphological studies are mingled throughout the book which hopefully will help the reader to integrate the different faces of the same problem Across the book the presynaptic component of synaptic transmission and its regulation is stressed much more than the postsynaptic phenomena Although this might be a limitation it has the advantage of increasing the focus of the book on a series of events which are gaining importance and interest every day

Emotion Explained Edmund T. Rolls, 2005 What produces emotions Why do we have emotions How do we have emotions Why do emotional states feel like something This book seeks explanations of emotion by considering these questions Emotion continues to be a topic of enormous scientific interest This new book a successor to *The Brain and Emotion* OUP 1998 describes the nature functions and brain mechanisms that underlie both emotion and motivation *Emotion Explained* goes beyond examining brain mechanisms of emotion by proposing a theory of what emotions are and an evolutionary Darwinian theory of the adaptive value of emotion It also shows that there is a clear relationship between motivation and emotion The book also examines how cognitive states can modulate emotions and in turn how emotions can influence cognitive states It considers the role of sexual selection in the evolution of affective behaviour It also examines emotion and decision making with links to the burgeoning field of neuroeconomics The book is also unique in considering emotion at several levels the neurophysiological neuroimaging neuropsychological behavioural and computational neuroscience levels

Neural Mechanisms in Taste Robert H. Cagan, 2020-02-03 The purpose of NEURAL MECHANISM in TASTE is to emphasize physiological principles and reveal new insights of this most recent research This book is aimed to

reach scientists within the broad area of neurophysiology as well as those in other disciplines who have interests in sensory mechanisms The focus is on two major themes peripheral mechanisms and neural processing at the central level Every chapter is written by an expert on the subject matter including definitive updates on the status of each topic This work is not only useful to researchers in taste but also to basic and applied scientists in related fields such as food technology doctoral and postdoctoral students

Sourcebook of Flavors Gary Reineccius,1994 Covers all aspects of the flavor industry Discusses mechanisms of flavor formation in plants and animal tissues means of manufacturing flavors including the handling and extraction of plant materials liquid flavors the creation of emulsions and dry flavorings quality control sensory analysis sensory instrumental correlations safety of flavorings and legal considerations in the flavor industry Features updated and expanded information on the role of the flavorist uses of biotechnology for the production of flavoring material essential oils plant materials and volatile and nonvolatile chemicals used in flavors and a comprehensive list of flavoring ingredients and their legal status

Comparative Invertebrate Neurochemistry G. G. Lunt,R. W. Olsen,2012-12-06 The attractions of invertebrate nervous systems have long been appreciated by neurophysiologists Indeed some of the milestones in our understanding of nervous systems have their foundations in experiments done on invertebrate preparations typified by the role of the squid axon in dissecting the events that constitute the action potential More recently we have seen how the relatively simple nervous system of Aplysia has permitted new insights into the molecular mechanisms of memory and learning Neurochemists however have not been enthusiastic about invertebrate tissues as their experimental material Much of the biochemical information on invertebrate nervous systems that has accrued has been incidental almost as a by product of what were primarily physiological investigations Fortunately the field is changing and research groups are making a positive choice to turn to invertebrate tissues Two important factors have contributed to this First the study of analogous systems in invertebrates and vertebrates can tell us much about the evolution of nervous systems The application of the techniques of molecular genetics to the study of such molecules as receptors and ion channels can provide detailed information about their composition that in turn allows us to better understand their function By extending such studies to the invertebrates we should be able to understand how such systems have developed Secondly invertebrate pests are responsible for enormous losses of agricultural crops and are major vectors of disease in man

Comprehensive Natural Products II ,2010-03-05 This work presents a definitive interpretation of the current status of and future trends in natural products a dynamic field at the intersection of chemistry and biology concerned with isolation identification structure elucidation and chemical characteristics of naturally occurring compounds such as pheromones carbohydrates nucleic acids and enzymes With more than 1 800 color figures Comprehensive Natural Products II features 100% new material and complements rather than replaces the original work 1999 Reviews the accumulated efforts of chemical and biological research to understand living organisms and their distinctive effects on health and medicine Stimulates new ideas among the

established natural products research community which includes chemists biochemists biologists botanists and pharmacologists Informs and inspires students and newcomers to the field with accessible content in a range of delivery formats Includes 100% new content with more than 6 000 figures 1 3 of these in color and 40 000 references to the primary literature for a thorough examination of the field Highlights new research and innovations concerning living organisms and their distinctive role in our understanding and improvement of human health genomics ecology environment and more Adds to the rich body of work that is the first edition which will be available for the first time in a convenient online format giving researchers complete access to authoritative Natural Products content

Molecular Pathology of Nerve and Muscle Antony D. Kidman, John K. Tomkins, Carol A. Morris, Neil A. Cooper, 2012-12-06 The third Symposium of the Foundation for Life Sciences was held in February 1983 at the Newport Inn Conference Centre in Sydney It was directed towards an understanding of the molecular neuropathology of muscle and nerve under a wide variety of conditions that may be induced by external agents or genetic lesions The first session on experimental neurology explored the processes involved in maintenance of nerve and muscle function This included many papers on myelination studies on immune reactions affecting nerves on synapses and on neuronal development This section was expanded to explore the control of muscle function in nerves including a discussion on cross reinnervation Toxic models of disease in the nervous system were then discussed including pathological states induced by physical agents such as kainic acid diphtheria toxin and IDPN A new dimension was added to the Symposium when for the first time psychologists participated and contributed to the session on external stressors and their effects on behavior Heavy metals herbicides repetitive work anxiety and their effects on behavior and health were all represented The discussion in this session attracted much interest from the participants particularly the basic scientists

Inborn Errors of Metabolism in Humans F. Cockburn, 2012-12-06 **Artificial Sweeteners** A. Wallace Hayes, William O. Berndt, 1989 *Food Additive Toxicology* Joseph A. Maga, Anthony Y. Chemical Factors in Neural Growth, Degeneration and Repair C. Bell, 1996-12-17 This volume provides an up to date survey of current thinking concerning the actions of chemical factors in the regulation of neuronal behaviour under normal and pathological conditions The book is divided into four sections dealing with chemical factors involved with the formation of axon pathways factors involved with neuronal survival and specialization during normal development factors involved in normal maintenance and repair of adult neurons and finally factors that have been implicated as mediators of degenerative changes in neurological and neuropsychiatric disorders
