Dymphna Cusack, Florence James, Miles Franklin, 2001 Love life writing and friendship are the intimate subjects of letters between three intelligent witty women who shared a passionate commitment to Australian literature These carefully selected letters tell a story that reads like a novel Their correspondence from the late 1920s to the mid 1950s reveals their public battles as well as their private ones Their personal conflicts are a microcosm of Australian society's struggles over the period

Heatwaves Glenn McGregor, 2024-10-09 Distinctively this book brings together an end to end understanding of heatwaves that is a consideration of their causes consequences for human and natural systems and societal responses to them in the form of adaptation and mitigation actions It advocates for recognizing the heatwave imperative and emphasizes that heatwaves matter Together the individual chapters make the point that knowing heatwaves from a holistic interdisciplinary perspective will assist with efforts towards heatwave risk reduction and building resilience to what is probably the most pervasive of a range of climate hazards The book will be of interest to upper level undergraduate and taught postgraduate students and researchers in geography climatology environmental atmospheric and population health sciences as well as climate and health researchers urban planners policy makers and the informed public with an interest in climate and society issues

Precision Public Health Tarun Weeramanthri, Hugh Dawkins, Gareth Baynam, Matthew Bellgard, Ori Gudes, James Semmens, 2018-06-25 Precision Public Health is a new and rapidly evolving field that examines the application of new technologies to public health policy and practice It draws on a broad range of disciplines including genomics spatial data data linkage epidemiology health informatics big data predictive analytics and communications The hope is that these new technologies will strengthen preventive health improve access to health care and reach disadvantaged populations in all areas of the world But what are the downsides and what are the risks and how can we ensure the benefits flow to those population groups most in need rather than simply to those individuals who can afford to pay This is the first collection of theoretical frameworks analyses of empirical data and case studies to be assembled on this topic published to stimulate debate and promote collaborative work

Fire, Storm and Flood James Dyke, 2021-08-05 An unflinching photographic record of the epic effects of a violent climate from the earliest extinction events to the present Violent geologic events have ravaged the Earth since time began spanning the vast eons of our planet's existence These seismic phenomena have scored their marks in rock strata and been reflected in fossil records for future humanity to excavate and ponder For most of the preceding 78 000 years Homo sapiens simply observed natural climate upheaval One hundred years ago however industrialization stunningly changed the rules so that now most climate change is driven by us Fire Storm and Flood is an unflinching photographic record of the epic effects of a violent climate from the earliest extinction events to the present in which we witness climate chaos forced by unnatural global warming It uses often emotional and moving imagery to drive

home the enormity of climatic events offering a sweeping acknowledgment of our crowded planet's heartbreaking vulnerability and show stopping beauty **Overland**, 1961 *Impacts of Climate Change on Human Health* Clare Heaviside, 2021-01-05 Climate change poses a serious challenge to our health and wellbeing The increasing frequency of extreme weather events such as floods droughts and heatwaves and the direct impacts of changes in temperature have direct impacts on health At the same time broader environmental change affects infectious disease risk air pollution and other forms of exposure The different ways in which climate change will affect health are complex interactive and different communities are disproportionately affected International actions such as the Paris Agreement and the Sustainable Development Goals recognise the future risks to society and acknowledge that we are already committed to a certain level of climate change Future adaptation measures therefore need careful assessment and implementation for us to be able to minimise the potential risks from climate change and at the same time maximise the potential health benefits of a cleaner greener world This Special Issue comprises original research articles and detailed reviews on the likely impacts of climate change on health in a range of geographical settings and the potential for adaptation measures to reduce some of these risks Ultimately studies like these will motivate policy level action for mitigation and help in determining the most effective methods of adaptation to reduce negative impacts in future through embedding scientific evidence into practice
